then descend direct so as to cross 43°02′N, 99°06′W at 8,000′ MSL; then at 8,000′ MSL direct to 42°54′N, 99°-17′W; then descend direct so as to cross 42°35′N, 99°31′W at 4,000′ MSL (Low Level Entry Point); then at 4,000′ MSL direct to 40°41′N, 99°38′W; then at 4,000′ MSL direct to 40°00′N, 100°10′W; then at 4,200′ MSL direct to 39°26′N, 100°36′W; then at 4,200′ MSL direct to 39°-13′N, 100°37′W; then at 4,100′ MSL direct to the entry point of the bomb run corridor at 38°50′N, 100°40′W.

Short Look and Lay Down—After passing 38°50′N, 100°-40′W aircraft shall maintain between 3,000′ MSL and 6,000′ MSL through the bomb run corridor (5 SM either side of centerline from 38°50′N, 100°40′W to 38°23′N, 100°43′W), the minimum IFR altitude through the bomb run corridor is 4,100′ MSL. After exiting the route at 38°23′N, 100°43′W, aircraft shall turn left climbing to 38°20′N, 100°26′W; then continue climb direct so as to cross 38°31′N, 100°24′W at 16,000′ MSL; then at 16,000′ MSL direct 38°40′N, 100°23′W; then at 16,000′ MSL turn left to 38°41′N, 100°41′W; then climb direct to the Dodge City, Kansas, VOR crossing 38°19′N, 100°24′W at FL 230; then at FL 230 to the Dodge City VOR.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall after passing 38°23′N, 100°43′W, turn left and climb so as to cross 38°20′N, 100°26′W at 8,000′ MSL; then at 8,000′ MSL direct 39°21′N, 99°30′W; then at 8,000′ MSL turn left to 39°31′N, 99°34′W then at 8,000′ MSL direct 39°31′N, 100°12′W; then start descent direct so as to cross 39°31′N, 100°28′ at 4,200′ MSL; then turn left at 4,200′ MSL to 39°26′N, 100°36′W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000′; visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 42°25′N, 99°32′W to 41°35′N, 99°35′W and from 39°13′N, 100°37′W to 38°-23′N, 100°43′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude on the chart is the minimum altitude that will be reached during daylight hours.

Route Width—The route width is reduced to 5 SM on each side of centerline from 40°53′N, 99°38′W to 39°-35′N, 100°30′W.

Hours of Operation—24 hours daily, 7 days a week.

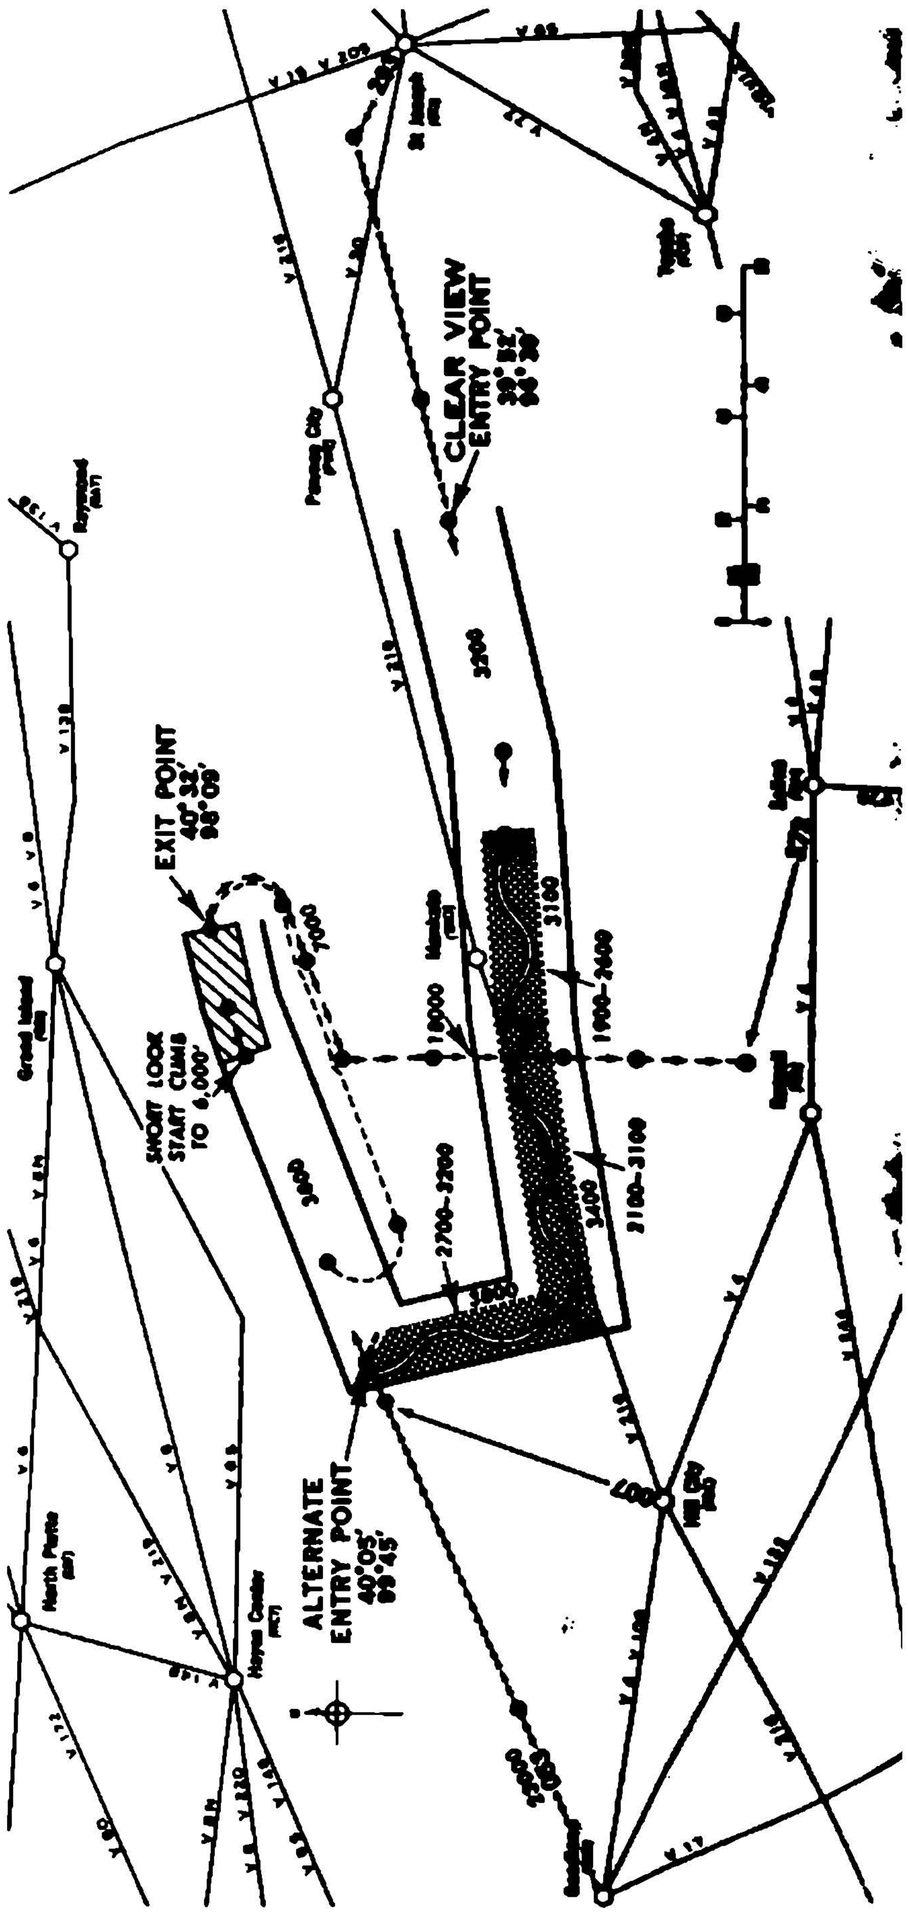
KANSAS/MISSOURI/NEBRASKA

CLEAR VIEW

Revised Effective December 24, 1964

Aircraft shall cross the St. Joseph, Mo. VOR at FL 240 or above, then proceed northwest on the St. Joseph VOR 293° radial, maintain FL 240 or above until 17 NM northwest of St. Joseph VOR; turn left direct 39°56′N, 96°12′W crossing this point at 9000′ MSL, descend to 3200′ MSL direct to the route entry point at 39°52′N, 96°39′W, maintain 3200′ MSL direct 39°43′N, 97°30′W, descend to 3100′ MSL direct 39°40′N, 98°30′W, climb to 3400′ MSL direct 39°31′N, 99°34′W, climb to 3800′ MSL direct 40°05′N, 99°45′W; maintain 3800′ MSL direct 40°26′N, 98°37′W.

Short Look—After passing 40°26′N, 98°37′W, proceed direct to 40°29′N, 98°27′W climbing so as to cross this point at 6000′ MSL; maintain 6000′ MSL through the bomb run corridor (5 SM either side centerline from 40°26′N, 98°37′W to 40°32′N, 98°09′W); after exiting the route at 40°32′N, 98°09′W, turn right climbing to cross 40°20′N, 98°03′W at 7000′ MSL; then at 700 MSL direct 40°16′N, 98°16′W; then start climb so as cross 40°10′N, 98°37′W at or below 14,000′ MSL; th turn left climbing so as to cross 39°54′N, 98°37′W FL 180; then at FL 180 direct 39°33′N, 98°37′W; th climb so as to cross 39°21′N, 98°37′W at or below FL 2 then start climb so as to cross the Salina VORTA 272/48 at FL 250.



Re-Entry—After completing the initial Short Look bo run, aircraft that are scheduled to execute an addition bomb run shall, after exiting the route at 40°32′N, 9 09′W, turn right climbing to 7000′ MSL to 40°2 98°03′W, maintain 7000′ MSL direct 40°00′N, 99°14′W turn right descending to 3800′ MSL to 40°12′N, 99°2 thence via the published route.

VFR and Contour—If the encountered weather conditio along the route are equal to or better than ceiling 3 visibility 5 miles, the pilot may descend VFR and op ate between the VFR altitudes indicated on the cha between the following points: From 39°42′N, 97°48′W 40°05′N, 99°45′W. During daylight hours, some VF operations will be flown 500′ above the immediate te

in. VFR operations conducted during the hours of rkness will not be flown lower than 800' above the rain. The lower VFR altitude shown on the chart is e minimum altitude that will be reached on each route gment during daylight hours.

Alternate Entry—Aircraft shall cross the Goodland, Kan- VOR at FL 230; and proceed northeast on the Good- d VOR 053° radial maintaining FL 230 until 35 NM rtheast of Goodland VOR, then descend so as to reach 0' MSL by the Hill City, Kansas VOR 007/49 NM fix; n descend to 3800' MSL direct 40°05'N, 99°45'W, nce via the published route.

Route Width—The route width from 39°31'N, 99°34'W the route exit point is 5 SM on the west and north e of the route centerline and 10 SM on the east and th side of the route centerline.

Hours of Operation—0000Z to 2359Z Monday through turday.

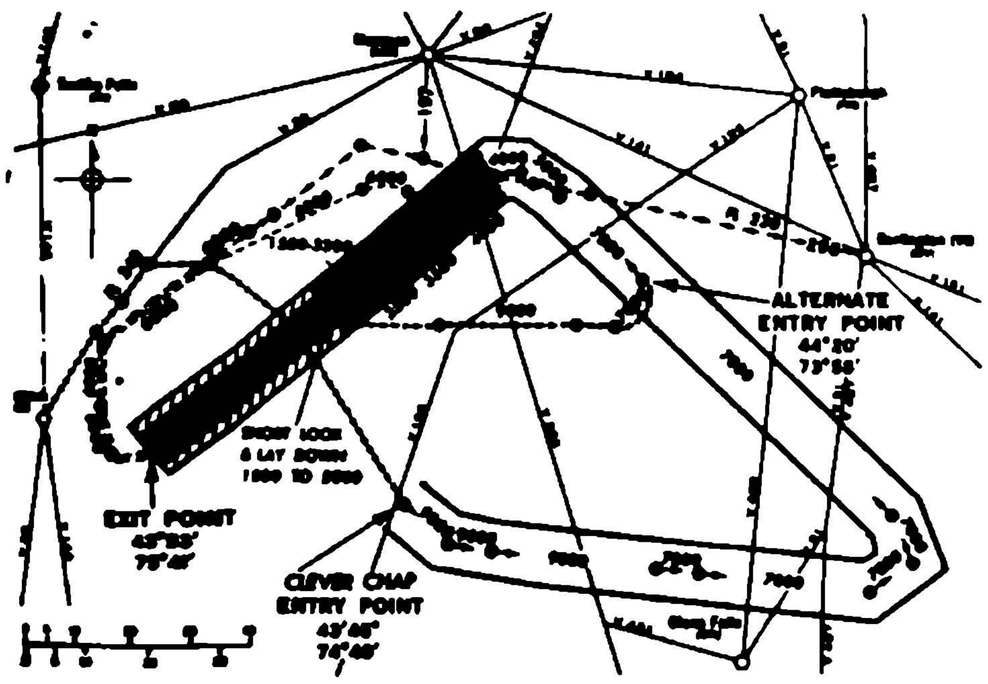
NEW YORK/VERMONT

•CLEVER CHAP

Effective March 4, 1965

(Replaces Short Doll Route)

Aircraft shall cross 43°57'N, 76°04'W (Watertown, . VOR) at FL 290; descend cross 44°11'N, 75°52'W FL 250 or above; cross 44°16'N, 75°47'W at FL 240; ect 44°22'N, 75°42'W; cross 44°22'N, 75°30'W at FL ; cross 44°13'N, 75°12'W at 14,000' MSL; cross low el entry point 43°45'N, 74°48'W at 9000' MSL; main- 9000' direct 43°39'N, 74°39'W direct 43°38'N, 74°30' direct 43°35'N, 73°55'W descend to cross 43°34'N, 46'W at 7000' MSL maintain 7000' direct 43°31'N, 10'W left turn to 43°36'N, 73°01'W to 43°43'N, 73°05'W ect 44°33'N, 74°16'W descend to cross 44°37'N, 74°24'W 000' cross 44°37'N, 74°30'W at 4000' maintain 4000' to 28'N, 74°44'W descend to cross 44°26'N, 74°47'W at 0' MSL; direct at 3500' MSL to enter bomb run cor- or at 44°15'N, 75°05'W.



Short Look and Lay Down—After passing 44°15'N, 75°05'W craft shall operate through bomb run corridor between 0' MSL and 5000' MSL. Minimum IFR altitude ough the bomb run corridor is 3500' MSL (the bomb corridor is 5 SM either side of centerline from 44°15' 75°05'W to 43°53'N, 75°41'W). After exiting the low el route at 43°53'N, 75°41'W aircraft shall turn right l climb so as to cross 43°52'N, 75°48'W at 6000' MSL. intain 6000' MSL direct 44°00'N, 75°51'W; direct 10'N, 75°51'W, direct 44°27'N, 75°22'W; climb cross 44°30'N, 75°17'W at 13,000' MSL or below; cross 44°41'N, 74°58'W at 14,000' (Burlington, Vt. VOR 298 radial) cross 44°39'N, 74°45'W at 16,000' (Massena, N.Y. VOR 197 radial); cross 44°35'30"N, 74°21'W at FL 200; climb to cross 44°33'30"N, 74°09'W at FL 230, maintain FL 230 direct 44°24'N, 73°11'W (Burlington, Vt. VOR).

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43°53'N, 75°41'W; turn right and climb so as to cross 43°52'N, 75°48'W at 6000' MSL; maintain 6000' direct 44°00'N, 75°51'W; direct 44°10'N, 75°51'W direct 44°22'N, 75°30'W direct 44°34'N, 74°57'W at 6000' MSL; turn right to 44°34'N, 74°48'W descending to cross 44°26' N, 74°47'W at 3500' MSL, thence via the Clever Chap route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated between the following points: From 44°37'N, 74°30'W to 43°53'N, 75°41'W. During daylight hours some VFR operations will be flown 800' above the immediate terrain. The lower VFR altitude is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 290; descend, cross 44°11' N, 75°52'W at FL 250 or above; cross 44°16'N, 75°47'W at FL 240; direct 44°22'N, 75°42'W; cross 44°22'N, 75°30' W at FL 190. Cross 44°13'N, 75°12'W at 14,000' MSL; continue descend to cross 44°13'N, 74°41'W at 9000' MSL; maintain 9000' direct 44°13'N, 74°12'W; start descend, cross 44°13'N, 74°04'W at 7000' MSL; maintain 7000' MSL direct 44°20'N, 73°58'W, thence via the Clever Chap route.

Route Width—The entire low level route is reduced to 5 SM either side of centerline.

Hours of Operation—0000Z to 2359Z Monday through Sunday.

ALABAMA/MISSISSIPPI

COIL SPRING

Revised Effective October 18, 1964

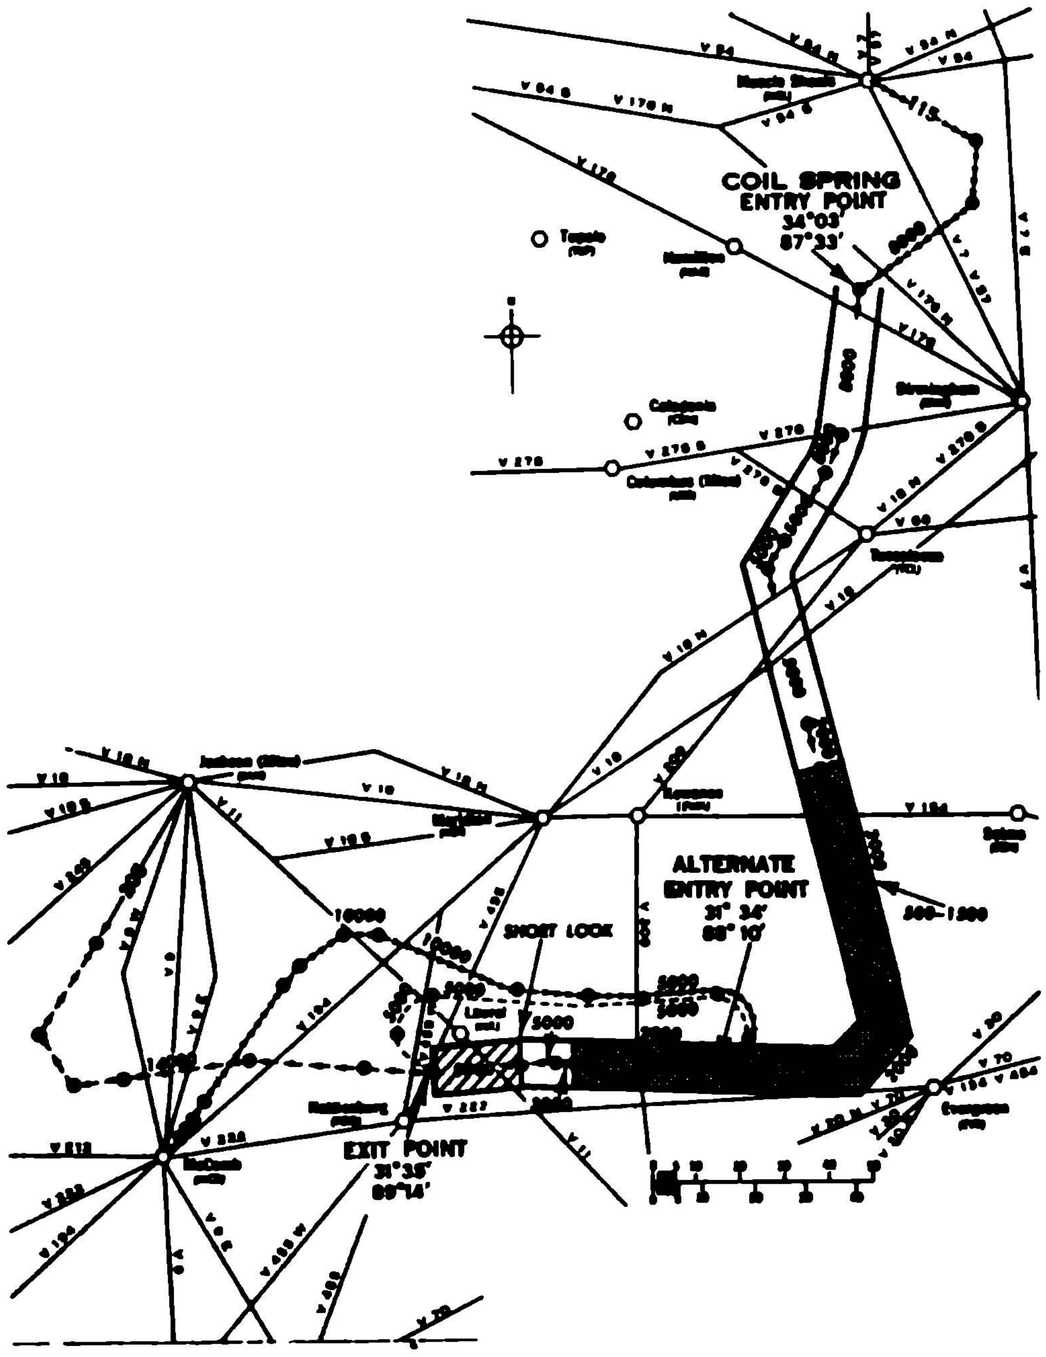
Aircraft shall cross Muscle Shoals, Alabama VOR at FL 200, or as assigned. Descend via Muscle Shoals VOR 115° radial, cross Muscle Shoals VOR 115°/24 NM at 12,000' MSL; turn right, descend to cross 34°19'N, 87°06'W at 8000' MSL, maintain 8000' MSL direct to the route entry point at 34°03'N, 87°33'W, direct 33°-35'N, 87°38'W, direct 33°28'N, 87°42'W; descend direct to cross 33°15'N, 87°52'W at 5000' MSL, maintain 5000' MSL direct 33°10'N, 87°56'W, direct 32°40'N, 87°48'W; descend to cross 32°31'N, 87°45'W at 2000' MSL, maintain 2000' MSL direct 31°41'N, 87°31'W, turn right to 31°33'N, 87°40'W, maintain 2000' MSL direct 31°36'N, 88°42'W; climb direct to cross 31°36'N, 88°46'W at 3000' MSL, direct to cross 31°36'N, 88°55'W at 5000' MSL. In addition to the above, aircraft may climb to 3000' MSL after 31°33'N, 87°40'W and maintain 3000' MSL to 31°36'N, 88°55'W during the hours 0600Z–1200Z.

Short Look—After passing 31°36'N, 88°55'W aircraft shall operate through the bomb run corridor at 5000' MSL. In addition, aircraft may operate through the bomb run corridor at 3000' MSL during the hours 0600Z–1200Z. (The bomb run corridor is 5 SM either side centerline from 31°36'N, 88°55'W to 31°35'N, 89°14'W.) After exiting the route at 31°35'N, 89°14'W, aircraft shall cross 31°36'N, 89°30'W at 5000' MSL; start climb direct to cross 31°37'N, 89°56'W at 14,000' MSL (reporting point), maintain 14,000' MSL direct 31°33'N,

90°25′W; start climb direct 31°32′N, 90°36′W, turn right to intercept Jackson, Miss. VORTAC 205° radial 56 NM fix (31°42′N, 90°44′W) at or below FL 230, thence via 205° radial to cross 36 NM fix at FL 250, maintain FL 250 or as assigned to Jackson VORTAC.

Re-Entry—Aircraft scheduled to execute an additional bomb run shall, after exiting the route at 31°35′N, 89°14′W, turn right, cross 31°42′N, 89°22′W at 5000′ MSL, maintain 5000′ MSL, turn right to 31°49′N, 89°-14′W, direct 31°48′N, 88°27′W; direct 31°48′N, 88°10′W; turn right, cross 31°40′N, 88°03′W at 3000′ MSL; continue turn, cross 31°34′N, 88°10′W at 2000′ MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 32°31′N, 87°-45′W to 31°36′N, 88°42′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum that will be reached on each segment during daylight hours.



Alternate Entry—Aircraft shall cross McComb, Miss. VOR (31°18′15″N, 90°15′29″W) at FL 230, or as assigned; maintain FL 230 or as assigned via the McComb VOR 028° radial to 13 NM fix; start descent, cross McComb VOR 028° radial 41 NM fix at 15,000′ MSL; cross 45 NM fix at 14,000′ MSL; turn right, cross 32°01′N, 89°35′W at 10,000′ MSL, maintain 10,000′ MSL, turn right, 32°01′N, 89°27′W, direct 31°49′N, 88°55′W; descend direct, cross 31°48′N, 88°39′W at 6000′ MSL; direct, cross 31°48′N, 88°27′W at 5000′ MSL, maintain 5000′ MSL direct 31°48′N, 88°10′W; turn right cross 31°40′N, 88°03′W at 3000′ MSL continue turn, cro 31°34′N, 88°10′W at 2000′ MSL; thence via the pu lished route.

Route Width—The entire route is reduced to 5 SM eith side of route centerline.

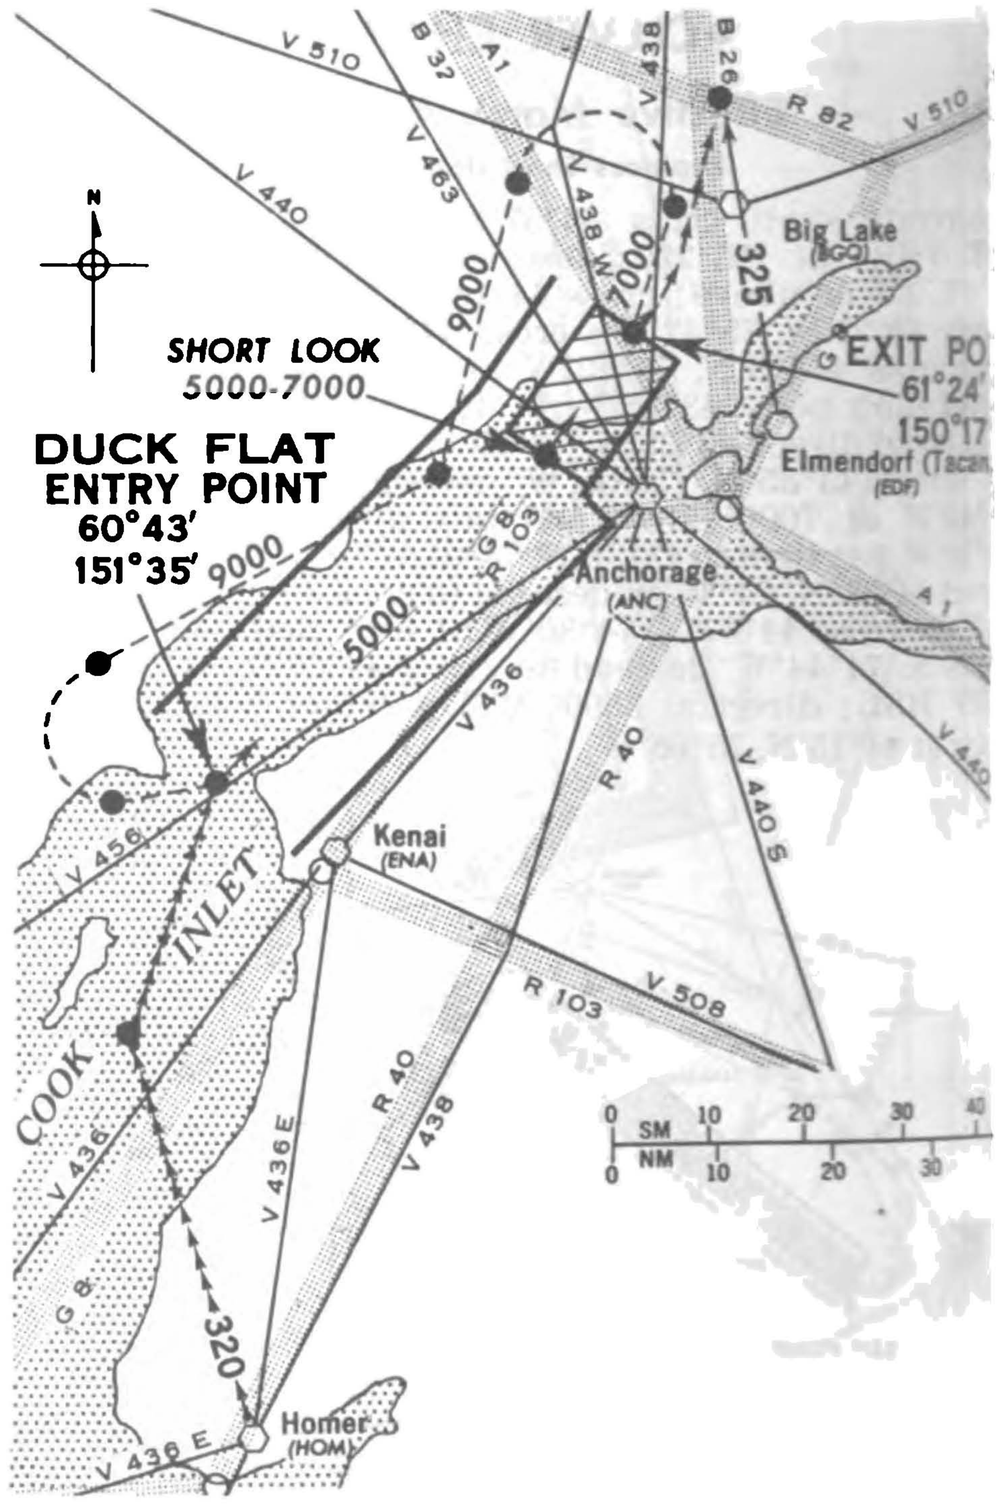
Hours of Operation—24 hours per day, 7 days a week.

DUCK FLAT

ALASKA

Effective June 16, 1963

Aircraft shall cross the Homer, Alaska VOR (reporti point) at FL 250 or as assigned by ARTCC, descend v the 320° radial of the Homer VOR to 60°20′N, 151°50′ continue descent to cross the route entry point at 6 43′N, 151°35′W at 5000′ MSL, maintain 5000′ MSL 61°13′, 150°34′W.



Short Look—After passing 61°13′N, 150°34′W aircra shall maintain between 5000′ MSL and 7000′ MS through the bomb run corridor (5 smi either side cente line from 61°13′N, 150°34′W to 61°24′N, 150°17′W After passing 61°24′N, 150°17′W (reporting point), t route exit point, aircraft shall climb to or maintain 70 MSL direct to the Elmendorf TACAN 325° radial 30 N fix (Willow Intersection).

Re-Entry—After completing the initial bomb run aircra that are scheduled to execute an additional bomb ru shall, after exiting the route at 61°24′N, 150°17′W, mai

ain 7000' MSL to 61°35'N, 150°08'W, then turn left limbing to 9000' MSL direct to 61°38'N, 150°38'W, then 000' MSL to 61°13'N, 150°54'W, then 9000' MSL direct 0°53'N, 151°57'W, then a left descending turn to cross 0°41'N, 151°54'W at 7000' MSL or above, direct to re-atry the Duck Flat route at 60°43'N, 151°35'W at 5000' SL.

Route Width—The route width is reduced to 5 sml southst of centerline from 61°13'N, 150°34'W to 61°24'N, 0°17'W.

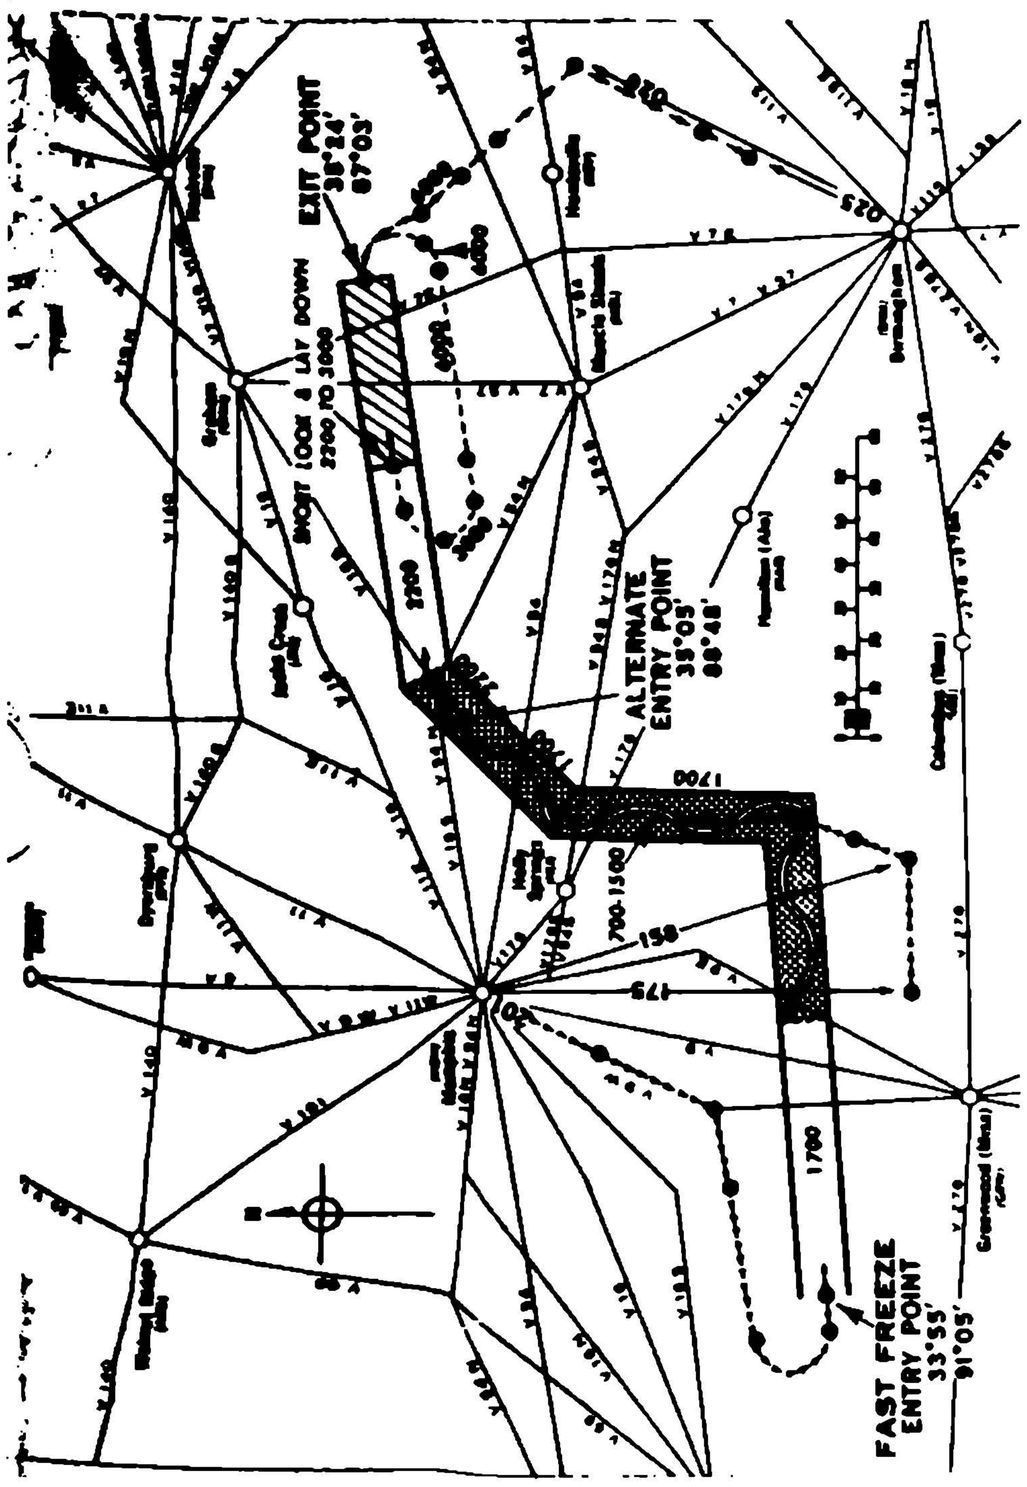
Hours of Operation—2000Z to 2400Z Monday through riday.

ALABAMA/MISSISSIPPI/TENNESSEE

FAST FREEZE

Effective January 4, 1965 through March 27, 1965

Aircraft shall cross the Memphis, Tennessee, VORTAC' FL 250 or as assigned by ARTC; then maintain FL 0 or assigned altitude via the 201° radial of the Memis VORTAC' to the 26 NM DME fix (34°39'N, 90°-'W); then descend direct so as to cross 34°17'N, °21'W (201/50 NM DME fix of Memphis VORTAC') FL 200; then descend direct so as to cross 34°14'N, °40'W at 16,000' MSL; then descend direct to 34°08'N,



°16'W; then turn left descending to 33°54'N, 91°13'W; en continue descend direct so as to cross 33°55'N, 91°-'W at 1700' MSL (low level entry point); then at 1700' MSL direct to 34°03'N, 89°12'W; then at 1700' MSL direct to 34°47'N, 89°11'W; then at 1700' MSL direct to 35°05'N, 88°48'W; then at 2200' MSL direct to 35°13'N, 88°39'W; then at 2200' MSL direct to 35°19'N, 87°47'W.

Short Look and Lay Down—After passing 35°19'N, 87°-47'W aircraft shall maintain between 2200' MSL and 3000' MSL through the bomb run corridor (5 statute miles either side of centerline from 35°19'N, 87°47'W to 35°24'N, 87°03'W). After exiting the route at 35°-24'N, 87°03'W, aircraft shall turn right climbing so as to cross 35°14'N, 86°47'W at 6000' MSL; then at 6000' MSL to 35°05'N, 86°38'W; then climb direct so as to cross 34°58'N, 86°30'W at 10,000' MSL or above; then climb direct so as to cross 34°43'N, 86°13'W at (026/71 NM DME fix of Birmingham, Alabama, VORTAC') at 15,000' MSL; then climb direct so as to cross 34°18'N, 86°30'W (025/43 NM DME fix of Birmingham, Alabama, VORTAC') at FL 220 or above; then climb direct so as to cross 34°09'N, 86°36'W (025/33 NM DME fix of Birmingham, Alabama, VORTAC') at FL 240.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after passing 35°24'N, 87°03'W, turn right and climb so as to cross 35°13'N, 86°55'W at 6000' MSL; then continue turn at 6000' MSL to 35°10'N, 87°01'W; then at 6000' MSL direct to 35°05'N, 87°46'W; then descend direct so as to cross 35°04'N, 87°56'W at 3000' MSL; then at 3000' MSL turn right to 35°10'N, 88°-06'W; then turn right descending so as to cross 35°17'-30'N, 87°59'W at 2200' MSL; then at 2200' MSL direct to 35°19'N, 87°47'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 34°00'N, 90°00'W to 35°13'N, 88°39'W. During daylight hours, some VFR operations will be flown 500 feet above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800 feet above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during dayight hours.

Alternate Entry—Aircraft shall cross the 175/83 NM DME fix of the Memphis, Tennessee, VORTAC (33°39'N, 89°53'W) at FL 200 or as assiged by ARTC; then descend direct to 33°39'N, 89°22'W (158/86 NM DME fix of the Memphis VORTAC'); then continue descent direct so as to cross 33°50'N, 89°18'W at 10,000' MSL or below; then descend direct so as to cross 34°03'N, 89°12'W at 6000' MSL; then descend direct so as to cross 34°19'N, 89°12'W at 1700' MSL; then at 1700' MSL direct to 34°47'N, 89°11'W; then at 1700' MSL direct 35°05'N, 88°48'W; thence via the published route.

Route Width—The route width is reduced to 5 statute miles on either side of centerline from 33°55'N, 91°05'W to 35°24'N, 87°03'W.

Hours of Operation—24 hours daily, 7 days per week.

ARKANSAS/MISSOURI

•FIRE SALE

Effective April 1 thru September 25, 1965

(Received too late to prepare chart)

Aircraft shall cross the Farmington, Missouri, VOR-TAC' (37°40'24''N, 90°14'02''W) at FL 240, or as assigned by ARTC; then at FL 240, or assigned altitude, proceed via the 227° radial of the Farmington VORTAC direct to 37°29'N, 90°33'W (227/18 NM DME FIX);

then descend direct so as to cross 37°08′N, 91°07′W at 13,000′ MSL; then at 13,000′ MSL turn right to 37°07′N, 91°28′W; then turn right descending to 37°15′N, 91°38′W; then continue turn descending to 37°23′N, 91°28′W; then descend direct so as to cross 37°23′N, 91°13′W at 6000′ MSL; then descend direct so as to cross 37°23′N, 91°00′W at 3000′ MSL, then at 3000′ MSL direct to 37°22′N, 89°50′W; then at 3000′ MSL turn left to 37°32′N, 89°34′W; then descend direct so as to cross 37°35′N, 89°34′W at 2300′ MSL; then at 2300′ MSL direct to the route entry point at 37°39′N, 89°40′W; then at 2300′ MSL direct to 38°00′N, 90°10′W; then at 2400′ MSL direct to 38°08′N, 90°43′W; then at 2800′ MSL direct to 37°30′N, 91°30′W; then at 2800′ MSL direct to 37°13′N, 91°54′W; then at 2800′ MSL direct to 36°45′N, 91°39′W; then at 2500′ MSL direct to 36°26′N, 91°42′W; then at 2500′ MSL direct to 36°00′N, 91°33′W.

Short Look and Lay Down—After passing 36°00′N, 91°-33′W, aircraft shall maintain between 2000′ MSL and 3000′ MSL through the bomb run corridor (5 SM either side of centerline from 36°00′N, 91°33′W to 35°27′N, 91°22′W). After exiting the route at 35°27′N, 91°22′W, aircraft shall turn left and climb so as to cross or maintain 3000′ MSL to 35°23′N, 91°12′W; then at 3000′ MSL to 35°22′N, 90°54′W; then start climb so as to intercept the 159° radial of the Walnut Ridge VOR (35°30′N, 90°45′W) at 7000′ MSL; then climb via the inbound 159° radial of the Walnut Ridge VOR so as to cross the 28 NM fix (35°40′N, 90°48′W) at 11,000′ MSL or above; then via the 159° radial climb so as to cross the 19 NM fix (35°48′N, 90°51′W) at 14,000′ MSL; then at 14,000′ MSL via the 159° radial inbound and the 339° radial outbound direct to the 33 NM fix (36°39′N, 91°08′W); then start climb so as to cross 36°58′N, 90°51′W at FL 200; then climb so as to cross 37°04′N, 90°23′W (FAM 185/37) at FL 250.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run, shall after passing 35°27′N, 91°22′W, turn right and climb so as to cross or maintain 3000′ MSL to 35°21′N, 91°24′W; continue turn and climb so as to cross 35°24′N, 91°34′W at 5000′ MSL; then at 5000′ MSL direct 36°24′N, 91°54′W; then turn right descending so as to cross 36°26′N, 91°42′W at 2500′ MSL; thence via the published route .

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 37°40′N, 91°18′W to 36°26′N, 91°42′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached during daylight hours.

Alternate Entry—Aircraft shall cross the Farmington, Missouri, VORTAC at FL 240, or as assigned by ARTC: maintain FL 240, or assigned altitude, via the Farmington VORTAC 227° radial to the 18 NM DME fix (37°29′N, 90°33′W); then descend direct so as to cross 37°08′N, 91°07′W at 13,000′ MSL; then at 13,000′ MSL turn left to 36°55′N, 91°08′W; then right turn descending so as to cross 36°26′N, 91°42′W at 2500′ MSL; thence via the published route.

Route Width—The route width is reduced to 5 SM on both sides of the centerline from 37°39′N, 89°40′W to 38°00′N, 90°10′W, and on the north side of centerline from 38°00′N, 90°10′W, to 38°08′N, 90°43′W.

Hours of Operation—24 hours daily, 7 days per week.

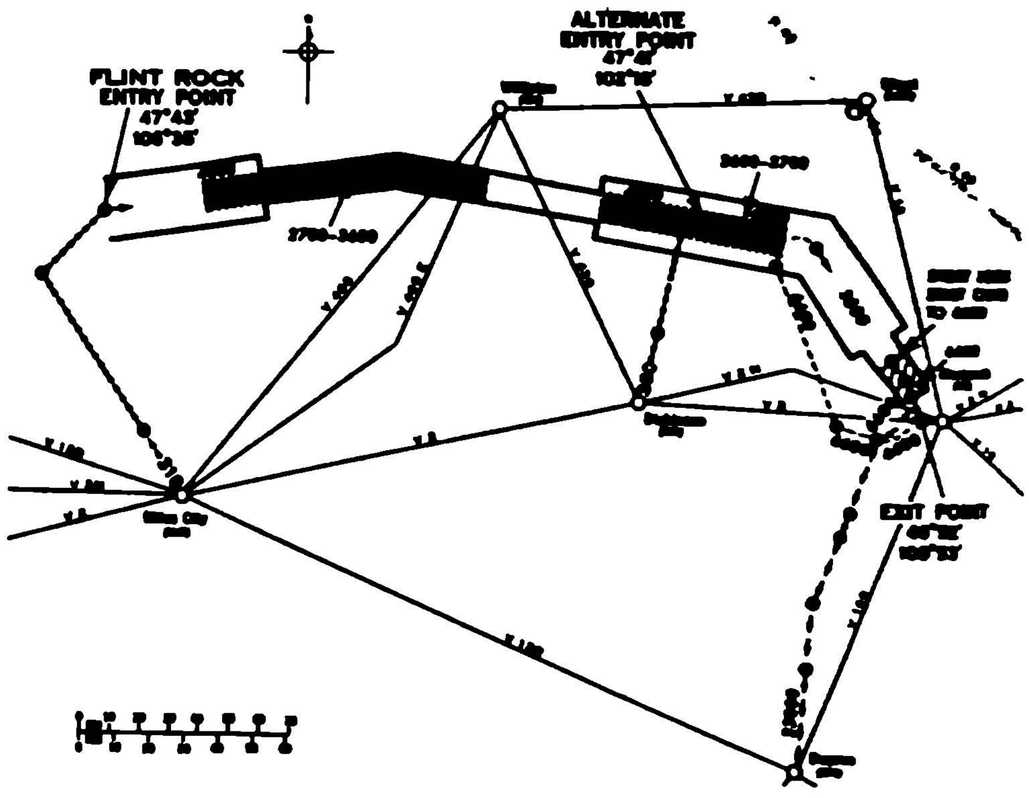
•FLINT ROCK

MONTANA/NORTH DAKOTA

Revised Effective June 14, 1964

Aircraft shall cross the Miles City, Montana VOR TAC (reporting point) at FL 230, or as assigned b ARTCC, and proceed via the 310° radial, maintainin FL 230 or as assigned, to 46°40′N, 106°14′W; the descend to cross 47°24′N, 107°00′W at or above 600 MSL; then continue descent so as to cross the rou entry point, 47°43′N, 106°35′W, at 4000′ MSL; then a 4000′ MSL direct 47°57′N, 104°30′W; then at 4000′ MS direct 47°35′N, 101°31′W; then descend to 3500′ MS direct 47°02′N, 101°02′W.

Short Look—After passing 47°02′N, 101°02′W aircra shall climb so as to cross 46°56′N, 100°56′W at 660 MSL; then at 6600′ MSL direct to the exit point 46°52′ 100°53′W (bomb run corridor 5 SM either side of cente line from 47°02′N, 101°02′W to the exit point 46°52′ 100°53′W); then maintaining 6600′ MSL turn rig direct 46°39′N, 101°07′W; then start climb to FL 2 direct to 45°53′N, 101°35′W; direct to Dupree VORTA climbing so as to cross 46°19′N, 101°19′W at or abo 11,000′ MSL, crossing 46°13′N, 101°23′W at or belo FL 190; crossing 45°53′N, 101°35′W at FL 210, and reach FL 230 at a point 30 nautical miles northeast the Dupree VORTAC.



Re-Entry—After completing the initial bomb run aircra that are scheduled to execute an aditional Short Loo bomb run shall, after passing 46°52′N, 100°53′W mai tain 6600′ MSL direct 46°39′N, 101°07′W; then at 660 MSL make a right turn direct to 46°43′N, 101°24′W then at 6600′ MSL direct 47°30′N, 101°49′W; then right decending turn so as to reenter the route at 47 35′N, 101°31′W at 3500′ MSL, thence via the publishe route.

VFR and Contour—If the encountered weather condition along the route are equal to or better than ceiling 3000 visibility 5 miles, the pilot may descend VFR and ope ate between the VFR altitudes indicated on the cha between the following points: From 47°48′N, 105°53′V to 47°53′N, 103°53′W and from 47°47′N, 103°03′W t 47°37′N, 101°45′W. During daylight hours some VFI operations will be flown 800′ above the immediate ter rain. VFR operations will not be conducted during th hours of darkness. The lower VFR altitude shown o the chart is the minimum altitude that will be reached o each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Dickinson, No Dakota VORTAC (reporting point) at 15,000′ MSL o

s assigned by ARTCC; then proceed via the 360° radial f Dickinson VORTAC at 15,000′ MSL, or assigned flight vel/altitude, direct to a point 20 NM north of the ickinson VORTAC; then descend so as to cross 47°42′-)′N, 102°27′W at 6000′ MSL; then a descending right rn so as to cross 47°41′N, 102°18′W at 4000′ MSL, ence via the published route.

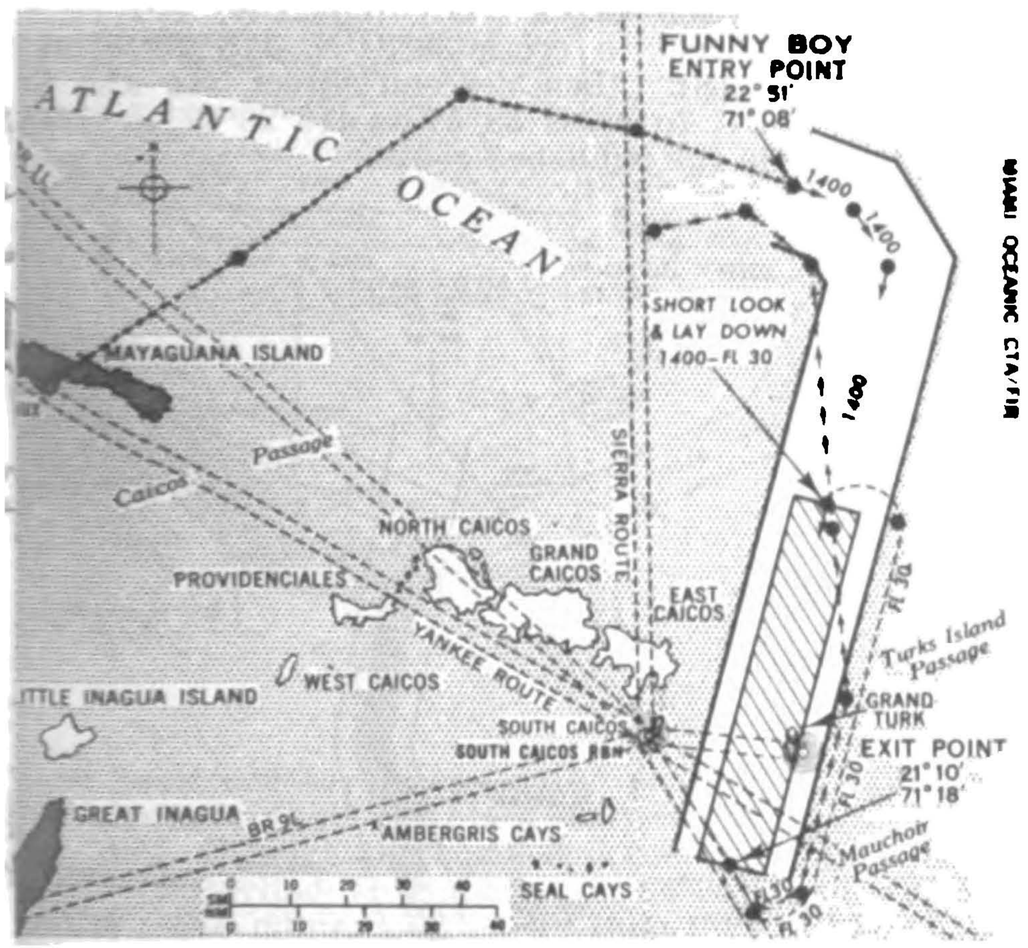
Route Width—The route width is reduced to 5 SM on ther side of centerline from 47°50′N, 105°30′W to 47°-′N, 103°03′W and from 47°07′N, 101°06′W to 46°52′N, 0°53′W.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

•FUNNY BOY

Revised Effective March 4, 1965

Aircraft shall cross 22°23′N, 73°02′W (Mayaguana FB) at FL 270 or as assigned; maintain FL 270 or as signed 22°41′N, 72°35′W (reporting point); start de-ent, cross 23°05′N, 72°00′W at FL 150; right turn, oss 23°00′N, 71°33′W at FL 90 or below; cross 22°51′N, °08′W at 1400′ MSL (the route entry point); maintain 00′ MSL direct 22°48′N, 70°58′W; turn right to °39′N, 70°53′W; direct 22°04′N, 71°03′W.



Short Look and Lay Down—After passing 22°04′N, 71°-′W, aircraft shall maintain between 1400′ and FL 30 rough the bomb run corridor (5 SM either side of cen-line from 22°04′N, 71°03′W to 21°10′N, 71°18′W). ter exiting the route at 21°10′N, 71°18′W, aircraft all turn left, cross 21°03′N, 71°14′W at FL 30; main-in FL 30 to 21°06′N, 71°08′W, direct 21°35′N, 71°00′W; art climb, cross 22°00′N, 71°02′W at FL 110 or above ss 22°40′N, 71°06′W at FL 250 or above; left turn to °48′N, 71°16′W; cross 22°45′N, 71°30′W at FL 290 or assigned.

Re-Entry—After completing the initial bomb run, air-aft scheduled to execute an additional bomb run shall, ter exiting the low level route at 21°10′N, 71°18′W, rn left cross 21°03′N, 71°14′W at FL 30; maintain FL to 21°06′N, 71°08′W; direct 22°01′N, 70°53′W; turn t descend to cross 22°04′N, 71°03′W at 1400′; thence the published route.

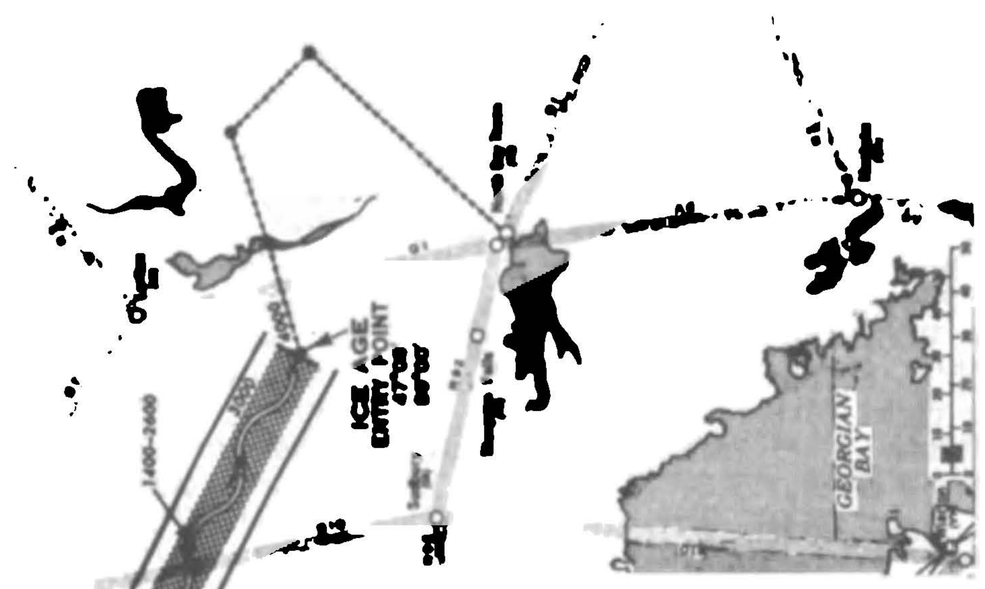
Hours of Operation—0000Z to 2359Z Monday through turday.

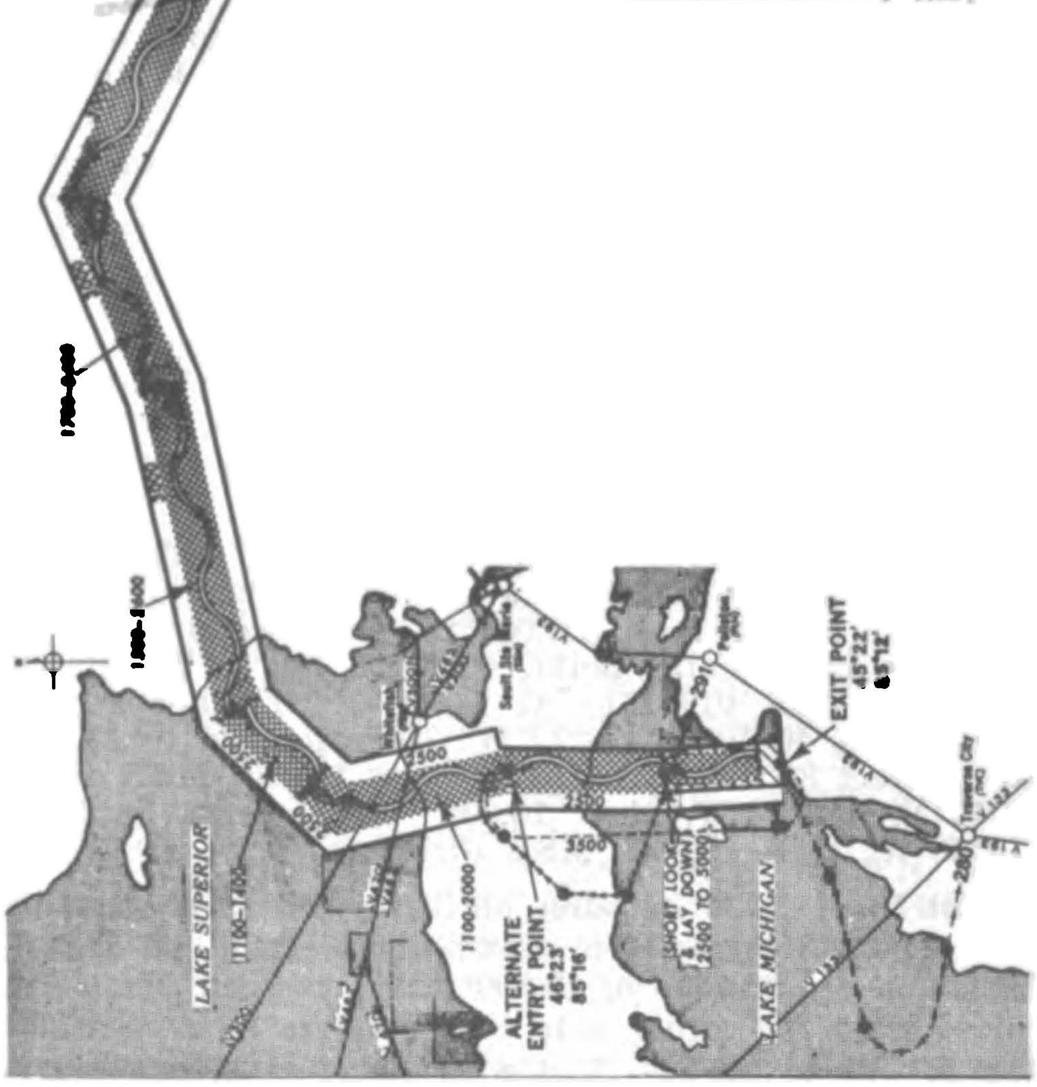
MICHIGAN/ONTARIO, CAN.

ICE AGE

Revised Effective September 6, 1964

Start descent over North Bay Ont. TACAN from FL 250 or as otherwise assigned to 17,000′ MSL direct 47°-04′N, 78°25′W, descend to 10,000′ MSL direct to 47°22′N, 78°49′W, descend to 4000′ MSL direct to 47°15′N, 79°-25′W, maintain 4000′ MSL direct to low level entry point at 47°08′N, 80°00′W (aircraft shall maintain an altitude below 3500′ AGL on the low level route while in Canadian airspace), descend so as to cross 47°22′N, 80°35′W at 3000′ MSL, then maintain 3000′ MSL direct 47°58′N, 82°15′W, then at 3000′ MSL direct to 47°40′N, 83°16′W, then at 3000′ MSL direct 47°23′N, 85°00′W, then descend direct 47°06′N, 85°22′W at 2500′ MSL (termination of Canadian portion of route). Aircraft shall enter the U.S.A. at 47°06′N, 85°22′W at 2500′ MSL, direct 47°00′N, 85°30′W at 2500′ MSL, direct 46°23′N, 85°16′W at 2500′ MSL, direct 45°48′N, 85°15′W at 2500′ MSL.





Short Look and Lay Down—After passing 45°48′N, 85°-15′W aircraft shall maintain between 2500′ MSL and 5000′ MSL through the bomb run corridor (5 SM either side of centerline from 45°48′N, 85°15′W to 45°22′N, 85°12′W. The minimum IFR altitude through the bomb run corridor is 2500′ MSL); after passing 45°22′N, 85°-

12′W then turn right climbing so as to cross 45°10′N, 85°47′W at 10,000′ MSL; then climb direct so as to cross 45°01′N, 86°33′W at 12,000′ MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22′N, 85°12′W turn right climbing so as to cross 45°21′N, 85°32′W at 3,500′ MSL, then at 3,500′ MSL direct to 46°23′N, 85°-37′W; then turn right descending so as to cross 46°23′N, 85°16′W at 2500′ MSL; thence via the "Ice Age" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 47°08′N, 80°00′W to 45°27′N, 85°13′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Pellston, Michigan VOR at FL 200, or as asigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30′′N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ice Age" route.

Route Width—The route width is reduced to 5 statute miles east of centerline from 46°23′N, 85°16′W to 45°-22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

NEVADA

LITTLE SATIN

Revised Effective May 3, 1964

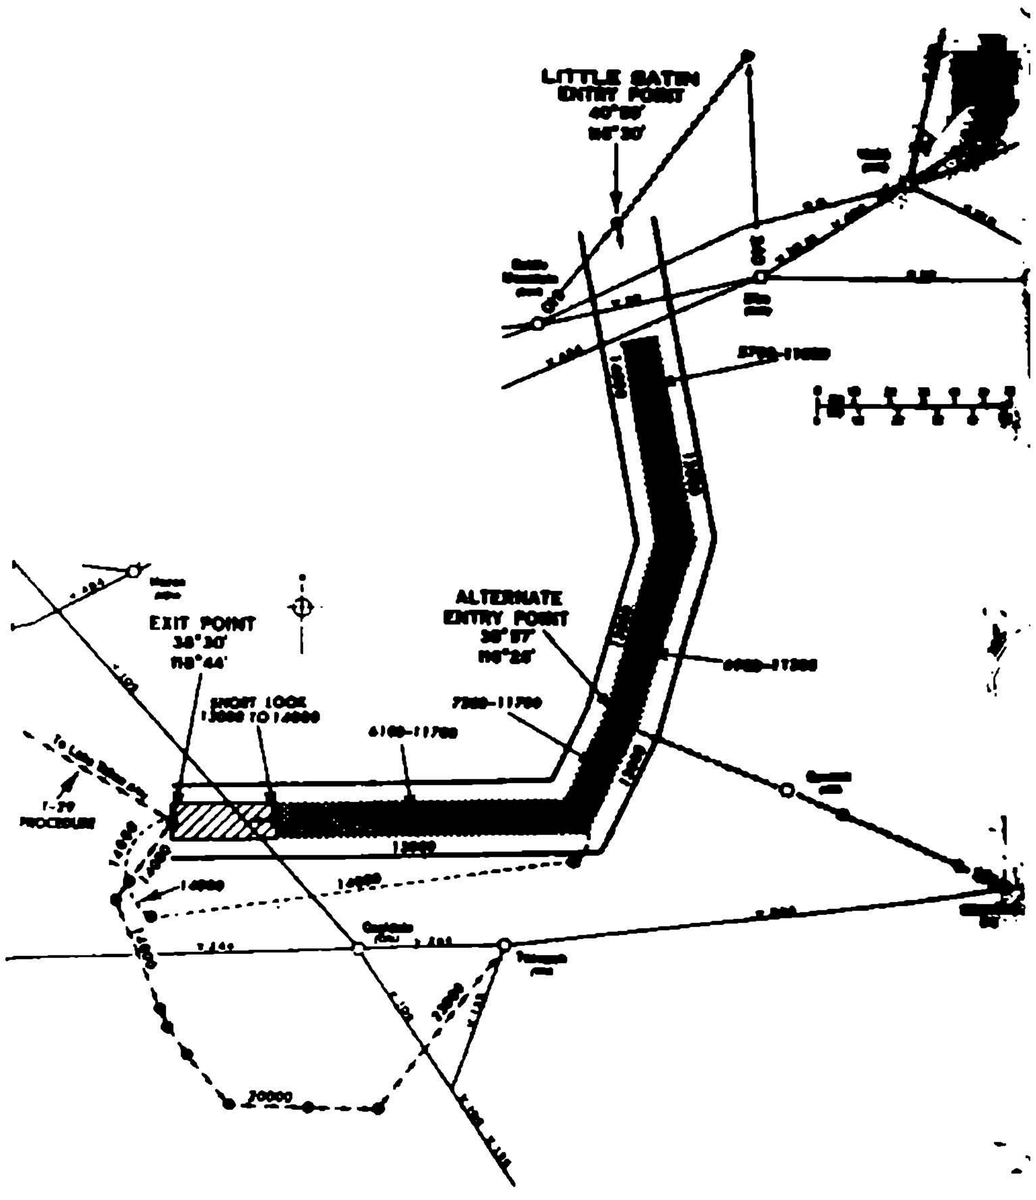
Aircraft shall cross 41°40′N, 115°49′W (Elko VOR-TAC 340°/55 NM DME fix) (reporting point) at FL 230 or as assigned by ARTCC; then descend direct to cross the route entry point, 40°59′N, 116°30′W (Battle Mountain VOR 019°/31) at 14,000′ MSL, then 14,000′ MSL direct 40°10′N, 116°17′W; then descend to 13,000′ MSL direct 39°42′N, 116°10′W, then 13,000′ MSL direct 38°57′N, 116°26′W, then 13,000′ MSL direct 38°34′N, 116°40′W, then 13,000′ MSL direct 38°31′N, 118°12′W.

Short Look—After passing 38°31′N, 118°12′W aircraft shall operate between a maximum altitude of 14,000′ MSL and a minimum of 13,000′ MSL thru the bomb run corridor (5 SM either side of centerline from 38°31′N, 118°12′ W to 38°30′ N, 118°44′ W). After exiting the route at 38°30′N, 118°44′W aircraft shall maintain 14,000′ MSL direct 38°10′N, 119°00′W, then 14,000′ MSL direct 37°43′N, 118°46′W (reporting point "Little Satin 2"); then climb direct to cross 37°40′N, 118°43′W at or above 14,300′ MSL and 37°33′N, 118°37′W at or above 15,000′ MSL; then climb to FL 200 direct 37°21′N, 118°25′W, then FL 200 direct to 37°21′N, 118°00′W (reporting point "Little Satin 3"); then climb direct to cross 37°21′N, 117°40′W at FL 230, then Fl 230 direct to Tonopah, Nev. VOR.

Re-Entry—After completing the initial bomb run aircraf that are scheduled to execute an additional bomb ru shall, after exiting the route at 38°30′N, 118°44′W, main tain 14,000′ MSL direct 38°15′N, 118°57′W, then 14,000 direct 38°06′N, 118°50′W (reporting point "Little Satl 1"), then 14,000′ MSL direct 38°23′N, 116°40′W; the descend to 13,000′ MSL direct to re-enter the route a 38°34′N, 116°40′W, thence via the published route.

VFR and Contour—If the encountered weather condition along the route are equal to or better than ceiling 300 visibility 5 miles, the pilot may descend VFR and ope ate between the VFR altitudes indicated on the cha between the following points: From 40°30′N, 116°22′ to 38°31′N, 118°12′W. During daylight hours some VF operations will be flown 800′ above the immediate terrai VFR operations will not be conducted during the hou of darkness. The lower VFR altitude shown on the cha is the minimum altitude that will be reached on eac route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Wilson Cree Nevada VOR (reporting point) at FL 230 or as a signed by ARTCC, then maintain assigned flight lev via the Wilson Creek VOR 277° radial until 15 NM nort west of the Wilson Creek VOR (38°21′N, 114°41′W) then descend direct to cross 38°34′N, 115°18′W at o below 15,000′ MSL; then descend direct via the Cu rant, Nev. VOR to cross 38°57′N, 116°26′W at 13,00 MSL, thence via the published route.



I–29 Procedure—Aircraft shall cross Wilson Creek Nevada, VOR (38°15′N, 114°23′W) (reporting point) a assigned by the ARTCC; then proceed via alternate entr route to 38°30′N, 118°44′W exit point of the bomb ru corridor; then climb to 14,000′ MSL or as assigned b the ARTCC direct Lake Tahoe, California, VOR (39°1 N, 120°16′W).

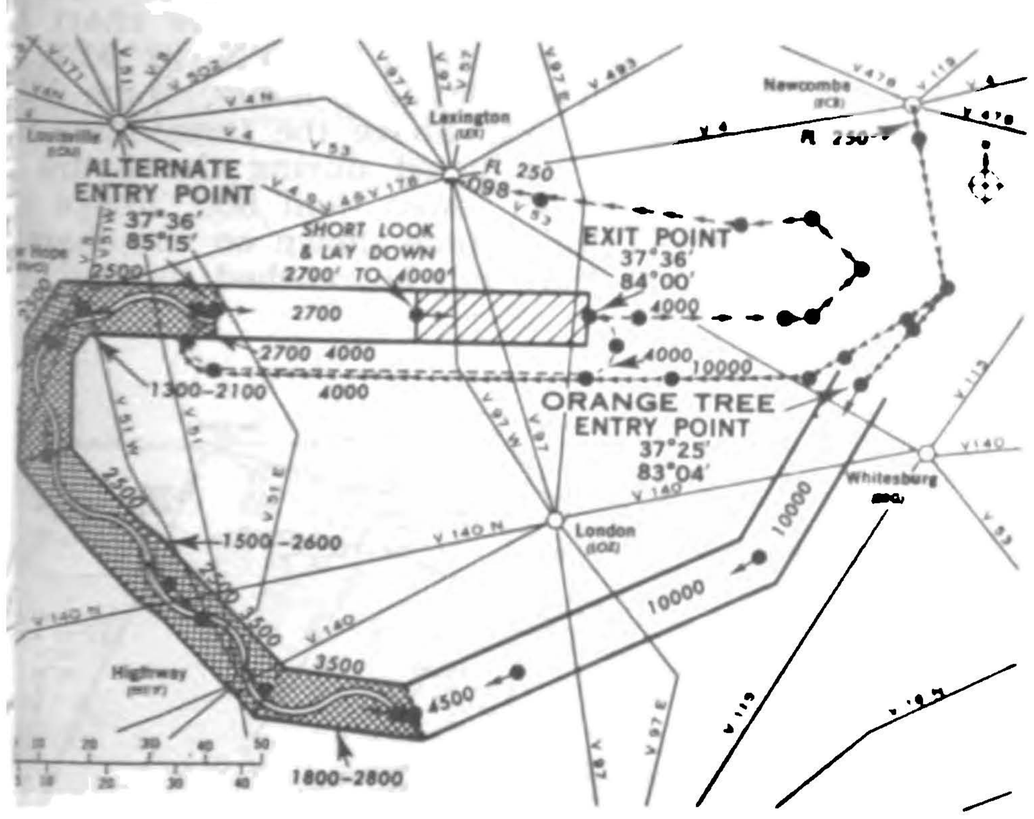
Hours of Operation—24 hours daily, 7 days a week.

KENTUCKY/TENNESSEE

ORANGE TREE

Revised Effective November 1, 1964

Aircraft shall cross the Newcomb, Kentucky VOR at L 250; maintain FL 250 direct 38°05'N, 82°53'W; ien start descend so as to cross 37°41'N, 82°48'W at 7,000' MSL; cross 37°34'N, 82°55'W at 14,000' MSL; ien continue descent so as to cross the route entry oint at 37°25'N, 83°04'W at 10,000' MSL, then at 10,000' SL direct 36°57'N, 83°25'W, then at 10,000' MSL direct 3°38'N, 84°13'W; then start descent so as to cross 36°- 1'N, 84°33'W at 4500' MSL; then descend so as to cross 3°31'N, 84°36'W at 3500' MSL, then at 3500' MSL direct 3°34'N, 85°03'W, then at 3500' MSL direct 36°46'N, 5°16'W; then descend so as to cross 36°51'N, 85°22'W 2500' MSL, then at 2500' MSL direct 37°11'N, 85°- 'W, then at 2500' MSL direct 37°30'N, 85°46'W, then 2500' MSL turn right to 37°35'N, 85°42'W, then at 00' MSL direct 37°36'N, 85°17'W; then climb so as to oss 37°36'N, 85°15'W at 2700' MSL, then at 2700' MSL rect to 37°36'N, 84°35'W.



Short Look and Lay Down—After passing 37°36'N, 84°- 'W aircraft shall maintain between 2700' MSL and 00' MSL through the bomb run corridor (5 SM either le of centerline from 37°36'N, 84°35'W to 37°36'N, °00'W; the minimum IFR altitude thru the bomb run rridor is 2700' MSL). After exiting the route at 37°- 'N, 84°00'W aircraft shall cross 37°36'N, 83°50'W at 00' MSL; then at 4000' MSL direct 37°36'N, 83°20'W; en start climb direct 37°36'N, 83°15'W; cross 37°44'N, °05'W at or below 9000' MSL; continue climb direct °52'N, 83°15'W; then climbing direct so as to cross °51'N, 83°30'W at or below 17,000' MSL; then via the xington VORTAC 098° radial climbing so as to cross °56'N, 84°11'W (Lexington VORTAC 098/14) at FL 0, then at FL 250 direct to Lexington VORTAC.

Re-Entry—After completing the initial bomb run aircraft at are scheduled to execute an additional bomb run all, after exiting the route at 37°36'N, 84°00'W, turn ght so as to cross 37°31'N, 83°55'W at 4000' MSL, en at 4000' MSL continue right turn to 37°26'N, 84°- 'W, then at 4000' MSL direct 37°26'N, 85°15'W; then rn right descending so as to cross 37°31'N, 85°20'W 2700' MSL, then at 2700' MSL continue right turn to °36'N, 85°15'W, thence via the "ORANGE TREE" ute.

VFR and Contour—If the encountered weather conditions ong the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 36°31'N, 84°33'W to 37°36'N, 85°15'W. During daylight hours some VFR operations will be flown 800' above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Newcomb, Ky. VOR at FL 250, then at FL 250 direct 38°05'N, 82°53'W; then start descent so as to cross 37°41'N, 82°48'W at 17,000' MSL; cross 37°35'N, 82°56'W at 14,000' MSL; cross 37°29'N, 83°08'W at 10,000' MSL; then at 10,000' MSL direct 37°26'N, 83°15'W; direct 37°26'N, 83°42'W; then start descent so as to cross 37°26'N, 84°00'W at 4000' MSL; then at 4000' MSL direct to 37°26'N, 85°-15'W; then turn right descending so as to cross 37°31'N, 85°20'W at 2700' MSL; then at 2700' MSL direct to 37°36'N, 85°15'W; thence via the established route.

Route Width—The route width is reduced to 5 statute miles on either side of centerline throughout the entire route.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

COLORADO/NEBRASKA/WYOMING

POOL SHARK

Effective January 4, 1965 through June 26, 1965

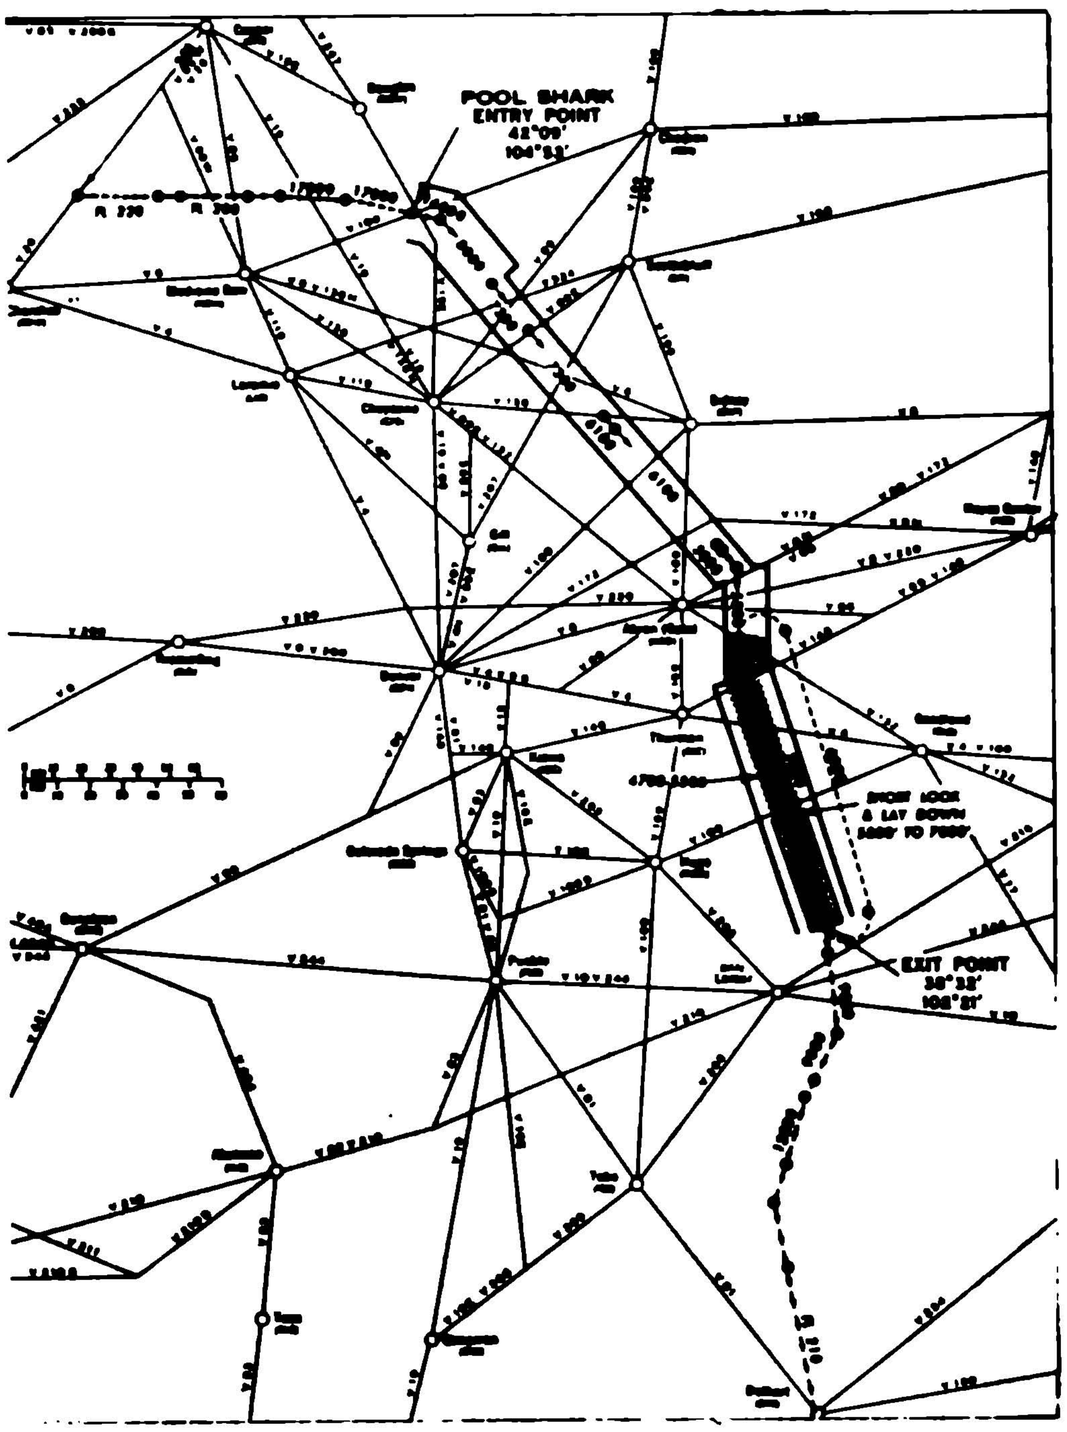
Aircraft shall cross 42°14'N, 107°07'W (Casper, Wyoming, VORTAC 201/63) at FL 220; then direct 42°14'N, 106°35'W; then descend direct to cross 42°14'N, 106°26'W at FL 200; then maintain FL 200 direct 42°-14'N, 105°59'W; then descend direct to cross 42°14'N, 105°46'W at 17,000' MSL; then maintain 17,000' MSL direct 42°13'N, 105°20'W, then maintain 17,000' MSL direct to the route entry point at 42°09'N, 104°53'W, then descend direct to cross 42°07'N, 104°42'W at 16,000' MSL; then descend direct to cross 41°47'N, 104°22'W at 8000' MSL; then descend direct to cross 41°33'N, 104°-08'W at 7300' MSL; then direct 41°07'N, 103°39'W; then descend direct to cross 41°03'N, 103°35'W at 6100' MSL; then 6100' MSL direct to 40°27'N, 102°57'W then descend direct so as to cross 40°25'N, 102°55'W at 5800' MSL then at 5800' MSL direct to 40°20'N, 102°49'W; then 5800' MSL direct 39°47'N, 102°49'W; then 5800' MSL direct 39°05'N, 102°33'W.

Short Look and Lay Down—After passing 39°05'N, 102°-33'W, aircraft shall maintain between 5800' MSL and 7000' MSL through the bomb run corridor (5 SM either side of centerline from 39°05'N, 102°33'W to 38°32'N, 102°21'W). After exiting the route at 38°32'N, 102°-21'W; aircraft shall climb direct to cross 38°24'N, 102°-20'W at 9000' MSL; then maintain 9000' MSL direct 37°59'N, 102°18'W; then 9000' MSL direct 37°45'N, 102°27'W; then climb direct to cross 37°40'N, 102°31'W at 12,000' MSL; then 12,000' MSL direct 37°20'N, 102°-39'W; then climb direct to cross 37°09'N, 102°44'W at or above 16,000' MSL; then climb direct to cross 36°-49'N, 102°40'W at FL 210; then maintain FL 210 direct to Dalhart, Texas, VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°32'N, 102°21'W, turn left to cross 38°35'N, 102°04'W at 6000' MSL; then 6000' MSL direct to 40°00'N, 102°31'W; then turn left to cross 40°00'N, 102°49'W at 5800' MSL, thence via the published route.

Alternate Entry—None.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart bewteen the following points 40°00'N, 102°49'W to 38°-32'N, 102°21'W. During daylight hours some VFR operations will be flown 500' above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain. The lower VFR altitude shown is the minimum altitude that will be reached on each route segment during daylight hours.



Route Width—The route width is reduced to 5 SM on the NE side of the centerline from 41°47'N, 104°22'W to 40°20'N, 102°49'W, and to 5 SM on the west side of centerline from 40°20'N, 102°49'W to 39°47'N, 102°49'W.

Hours of Operation—24 hours daily, 7 days per week.

TEXAS

SEA HORSE

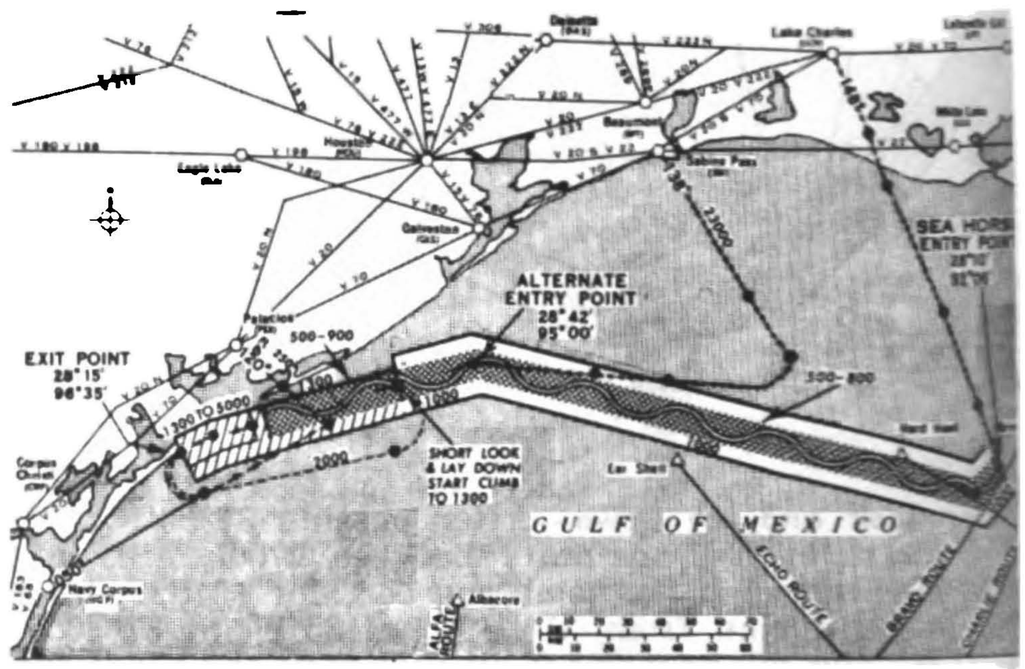
Revised Effective July 12, 1964

Aircraft shall cross the Lake Charles, La., VOR at 23,000' MSL, or as assigned; maintain 23,000' MSL or as assigned via the Lake Charles VOR 148° radial to to 25 NM fix; start descent, cross 29°31'N, 92°47'W at 19,000' MSL, descend direct to cross 28°55'N, 92°28'W at 15,000' MSL, descend direct to cross 28°28'N, 92°15'W at 8000' MSL or below, descend direct to cross 28°10'N, 92°06'W at 1000' MSL (Low level entry point). Maintain 1000' MSL, turn right to 28°03'N, 92°16'W, direct to 28°42'N, 95°00'W, direct to 28°35'N, 95°25'W.

Short Look and Lay Down—After passing 28°35'N, 95°-25'W climb to 1300' MSL direct 28°23'N, 96°12'W. After passing 28°23'N, 96°12'W aircraft shall maintain be tween 1300' and 5000' MSL through the bomb run cor ridor (5 SM either side of centerline from 28°23'N 96°12'W direct 28°20'N, 96°25'W direct 28°15'N, 96 35'W). (The minimum IFR altitude through the bom run corridor is 1300' MSL) to 28°15'N, 96°35'W, th route exit point, turn left to intercept the Navy Corpu VOR 050 radial (reporting point); then climb via th Navy Corpus VOR 050 radial to intercept the Palacio Texas VOR 120 radial at 18,000' MSL or above. Clim via the Palacois VOR 120 radial so as to reach FL 25 at a point 18 NM southeast of the Palacios VOR, cro the Palacios VOR at FL 250.

Re-Entry—After completing the initial Short Look bom run, aircraft that are scheduled to execute an additiona bomb run shall, after exiting the route at 28°15'N, 96° 35'W turn left to intercept the Navy Corpus VOR 050 radial at 2000' MSL, maintain 2000' MSL direct 28° 22'N, 95°26'W; turn left descending so as to cross 28° 35'N, 95°25'W at 1300' MSL, thence via the publishe route.

VFR and Contour—If the encountered weather condition along the route are equal to or better than ceiling 3000 visibility 5 miles, the pilot may descend VFR and operat between the VFR altitudes indicated on the chart b tween the following points: From 28°10'N, 92°06'W t 28°24'N, 96°09'W. During daylight hours, some VF operations will be flown 500' above the immediate te rain. VFR operations conducted during the hours o darkness will not be flown lower than 800' above th terrain. The lower VFR altitude shown on the chart i the minimum altitude that will be reached during da light hours.



Alternate Entry—Aircraft shall cross the Sabine Pas VOR at FL 230 or as assigned, then via Sabine Pas VOR 138° radial maintaining FL 230 until the 47 N fix (29°02'N, 93°33'W). Start descent direct to cro 28°44'N, 93°19'W at 16,000' MSL turn right, descend t cross 28°37'N, 93°58'W at 4000' MSL; descend direc to cross 28°39'N, 94°21'W at 1000' MSL direct 28°42'N 95°00'W thence via published route.

Route Width—The route width is reduced to 5 SM nort of the centerline from 28°35'N, 95°25'W to 28°15'N 96°35'W.

Hours of Operation—24 hours daily, seven days per week

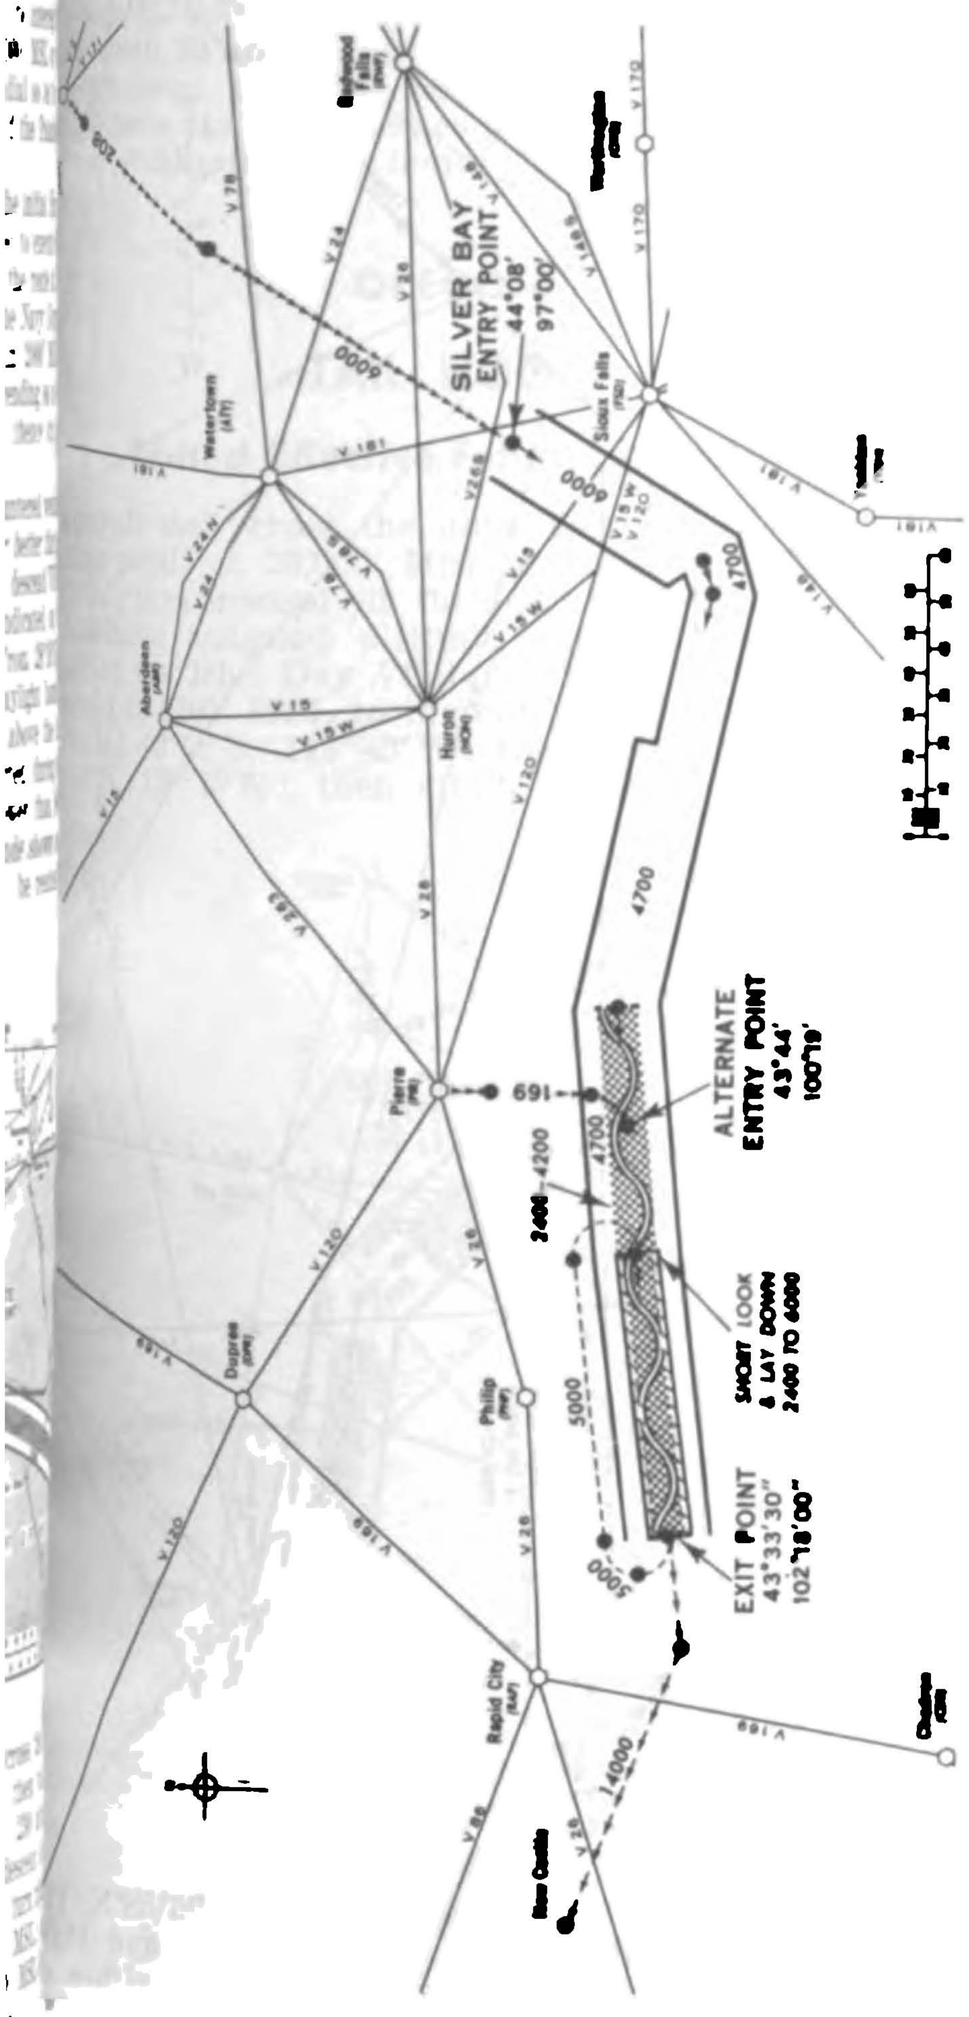
SOUTH DAKOTA

SILVER BAY

Effective October 18, 1964

Aircraft shall cross the Alexandria, Minn. VOR a FL 200 or as assigned by ARTCC and proceed via th

exandria VOR 208° radial **maintaining FL 200** or signed altitude until 10 NM **SW**; **then descend direct** as to cross 45°10′N, 96°00′**W at 6000′ MSL**; then at 00′ MSL direct 44°08′N, **97°00′W** (low level entry int); then at 6000′ **MSL** direct **43°29′N, 97°35′W**; then rn right descending so **as to cross 43°27′N, 97°45′W at** 00′ MSL; then at 4700′ **MSL direct 43°47′N, 99°45′W**; n at 4700′ MSL **direct to 43°42′N, 100°56′W.**



Short Look and Lay Down—After passing 43°42′N, 100°-W, aircraft shall maintain between 2400′ MSL and 0′ MSL through the bomb run corridor (5 SM either e of centerline from 43°42′N, 100°56′W to 43°33′-N, 102°18′W). The minimum IFR altitude through corridor is 4700′ MSL. After exiting the route at 33′30″N, 102°18′W aircraft shall climb so as to cross 30′N, 102°50′W at 14,000′ MSL; then at 14,000′ MSL ect to 43°51′N, 104°13′W. (New Castle, Wyoming)

Re-Entry—After completing the initial bomb run aircraft t are scheduled to execute an additional bomb run ll after exiting the route at 43°33′30″N, 102°18′W turn right and climb or descend so as to cross 43°40′N, 102°29′W, at 5000′ MSL; then at 5000′ MSL continue turn to 43°47′N, 102°20′W; then at 5000′ MSL direct 43°55′N, 100°58′W; then turn right descending so as to intercept the Silver Bay route at 43°42′N, 100°56′W at 4700′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 43°47′N, 99°45′W to 43°33′30″N, 102°18′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operation conducted during the hours of darkness will not be flonw lower than 800′ above the terrain. The lower VFR altitude shown is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Pierre, South Dakota VOR (reporting point) at 15,000′ MSL or below as assigned by ARTCC; then proceed via the Pierre VOR 169° radial maintaining 15,000′ MSL or assigned altitude until 10 NM south (44°13′N, 100°10′W); then descend direct to 43°52′N, 100°10′W; then turn right descending so as to cross 43°44′N, 100°19′W at 4700′ MSL; thence via the published route.

Route Width—The route width is reduced to 5 SM north of centerline between 43°29′N, 97°35′W to 43°35′N, 98°-30′W.

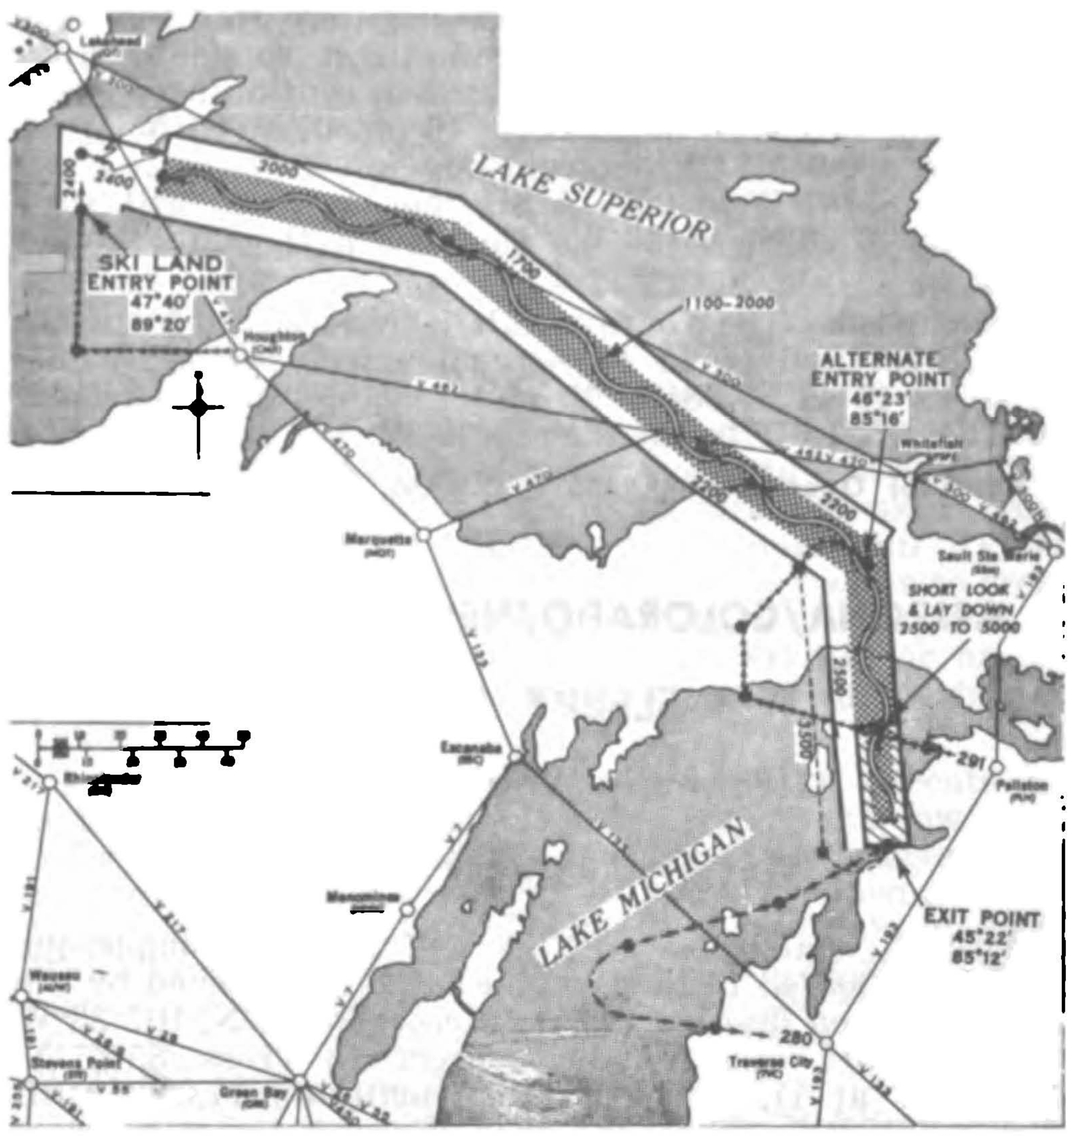
Hours of Operation—24 hours daily seven days per week.

MICHIGAN

SKI LAND

Effective September 6, 1964

Aircraft shall cross the Houghton, Michigan VOR at 20,000′ MSL or as assigned by ARTCC; then descend direct so as to cross 47°10′N, 89°20′W at 11,000′ MSL;



then turn right continuing descent so as to cross the route entry point at 47°40′N, 89°20′W at 2400′ MSL, then at 2400′ MSL direct 47°52′′N, 89°20′W, then at 2400′ MSL direct 47°48′N, 88°55′W; then descend to 2000′

MSL direct 47°35′N, 87°25′W; then descend to 1700′ MSL direct 46°49′N, 86°06′W; then climb so as to cross 46°42′N, 85°52′W at 2200′MSL, then at 2200′ MSL direct 46°23′N, 85°16′W; then climb to 2500′ MSL direct 45°-48′N, 85°15′W.

Short Look and Lay Down—After passing 45°48′N, 85°15′W aircraft shall maintain between 2500′ MSL and 5000′ MSL through the bomb run corridor (5 SM either side of centerline from 45°48′N, 85°15′W to 45°22′N, 85°-12′W. The minimum IFR altitude through the bomb run corridor is 2500′ MSL); after passing 45°22′N, 85°12′W then turn right climbing so as to cross 45°10′N, 85°47′W at 10,000′ MSL; then climb direct so as to cross 45°01′N, 86°33′W at 12,000′ MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at 21,000′ MSL. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22′N, 85°12′W, turn right climbing so as to cross 45°21′N, 85°32′W at 3500′ MSL, then at 3500′ MSL direct to 46°23′N, 85°37′W; then turn right descending so as to cross 46°23′N, 85°-16′W at 2500′ MSL; thence via the "Ski Land" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 47°48′N, 88°55′W to 45°27′N, 85°13′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Pellston, Mich. VOR at 20,000′ MSL, or as assigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at 20,000′ MSL or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30″N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ski Land" route.

Route Width—The route width is reduced to 5 statute miles west and north of centerline from 47°40′N, 89°-20′W to 47°48′N, 88°55′W, and east of centerline from 46°23′N, 85°16′W to 45°22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

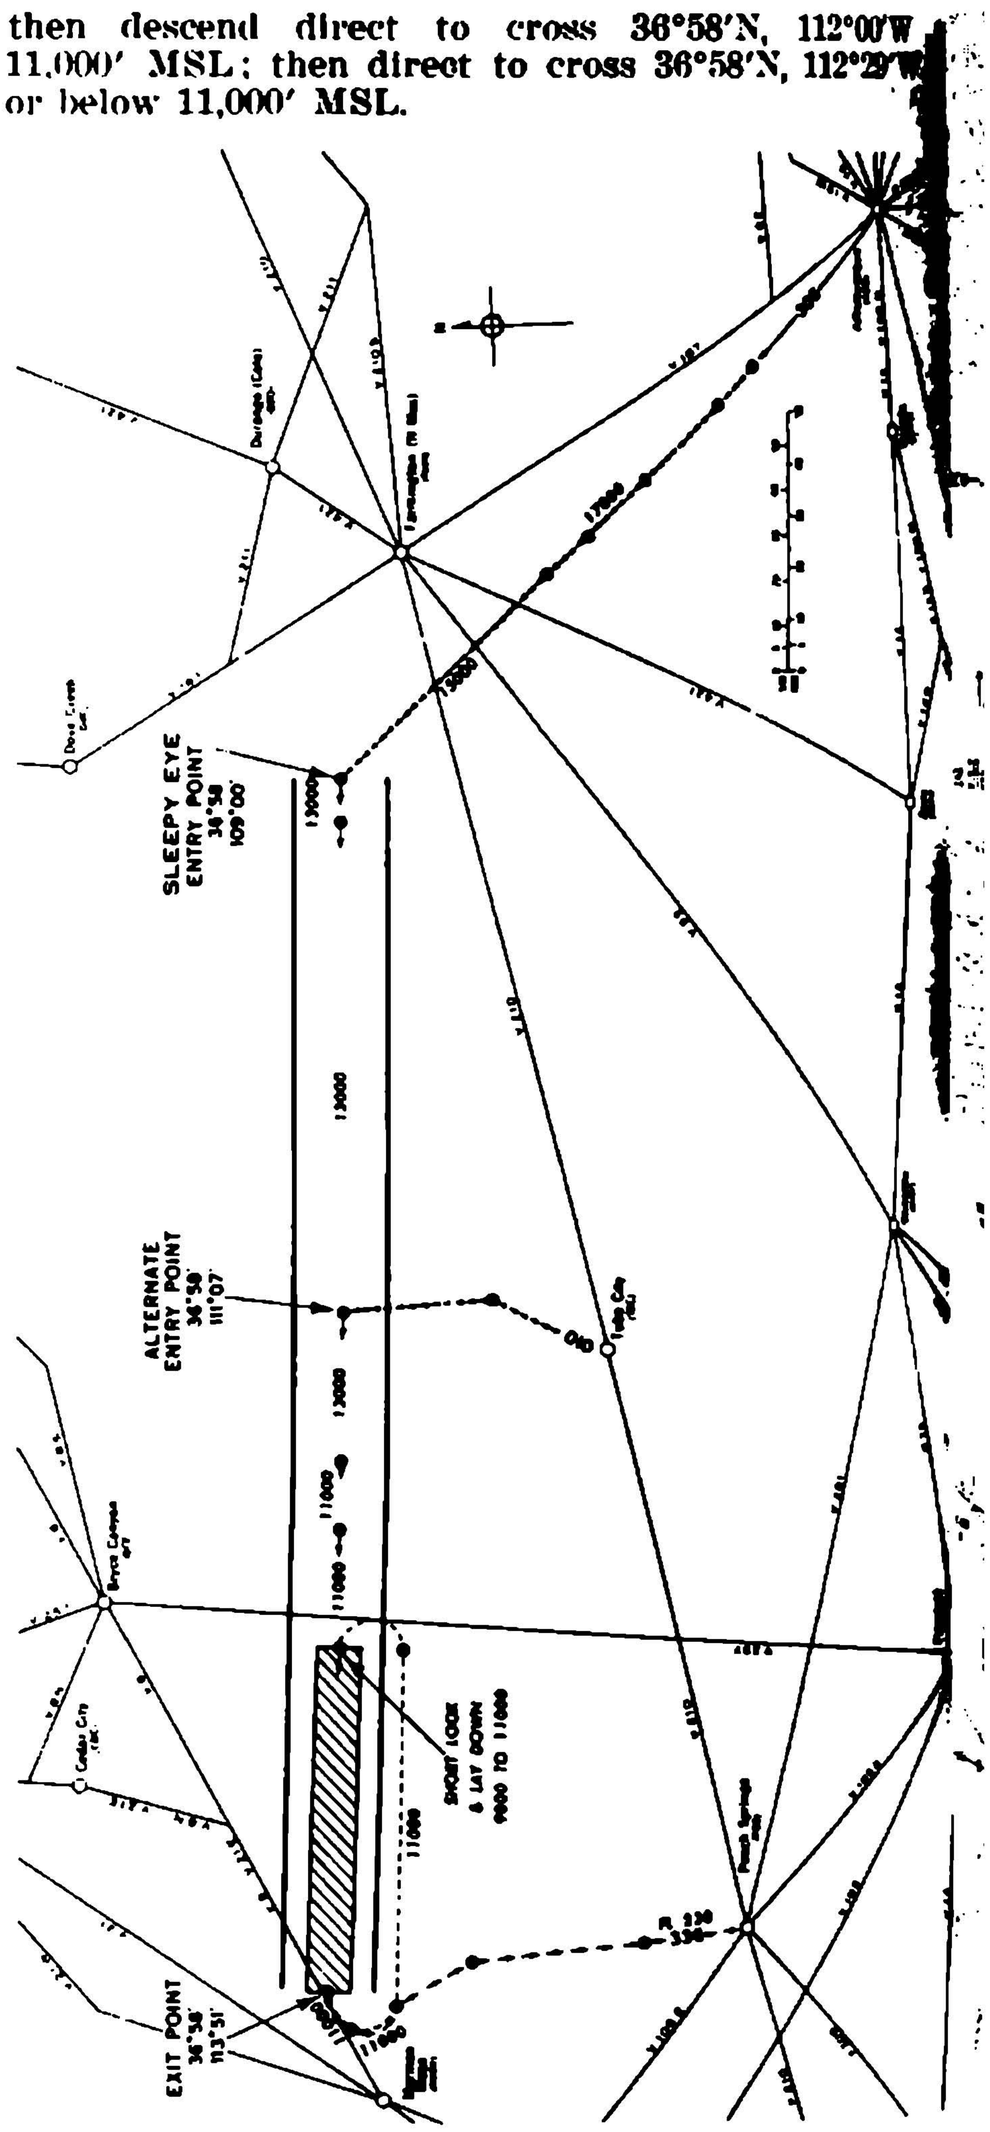
ARIZONA/COLORADO/NEW MEXICO/UTAH

SLEEPY EYE

(Formerly "Main Gate")

Effective February 4, 1965

Aircraft shall cross 35°34′N, 107°24′W (Albuquerque VORTAC 305/43 DME fix) at FL 250 or assigned by the ARTCC; then descend direct to cross 35°42′N, 107°33′W at FL 210; then descend direct to cross 35°57′N, 107°51′W at 17,000′ MSL; then maintain 17,000′ MSL direct 36°09′N, 108°04′W; then descend direct to cross 36°16′N, 108°12′W at 15,000′ MSL; then 15,000′ MSL direct 36°58′N, 109°00′W (low level entry point); then descend direct to cross 36°58′N, 109°10′W at 13,000′ MSL; then 13,000′ MSL direct 36°58′N, 111°42′W; then descend direct to cross 36°58′N, 112°00′W 11,000′ MSL; then direct to cross 36°58′N, 112°29′W or below 11,000′ MSL.



Short Look and Lay Down—After passing 36°58′N, 112°29′W aircraft shall operate between 9,000′ and 11,000′ MSL through the bomb run corridor (5 SM either side of centerline from 36°58′N, 112°29′W to 36°58′N, 113°51′W). After exiting the route at 36°58′N, 113°51′W aircraft shall turn left climbing to cross 36°53′N, 114°00′W at 11,000′ MSL; then maintain 11,000′ MSL direct to 36°44′N, 113°53′W; then climb via direct to cross 36°30′N, 113°42′W at or below 17,000′ MSL (reporting point "SLEEPY EYE" #1); then direct to cross 35°58′N, 113°36′W (PGS 336/21 DME fix) at FL 230; then intercept and proceed via Peach Springs 336 radial to Peach Springs (35°37′30″N, 113°32′W).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 36°58′N, 113°51′W

m left via direct to cross 36°53′N, 114°00′W at 11,000 SL; then 11,000′ MSL direct 36°44′N, 113°53′W; then ,000′ MSL direct 36°44′N, 112°29′W; then turn left ect to cross 36°58′N, 112°29′W at or below 11,000′ SL; thence via published route.

Alternate Entry—Aircraft shall cross the Tuba City, rizona VOR (36°07′30″N, 111°16′W) (Reporting int) at FL 240 or as asigned by the ARTCC; then intain FL 240 or assigned altitude via Tuba City 010 dial until 23 miles north (36°28′N, 111°04′W); then scend direct to cross 36°58′N, 111°07′W at 13,000′ SL; thence via published route.

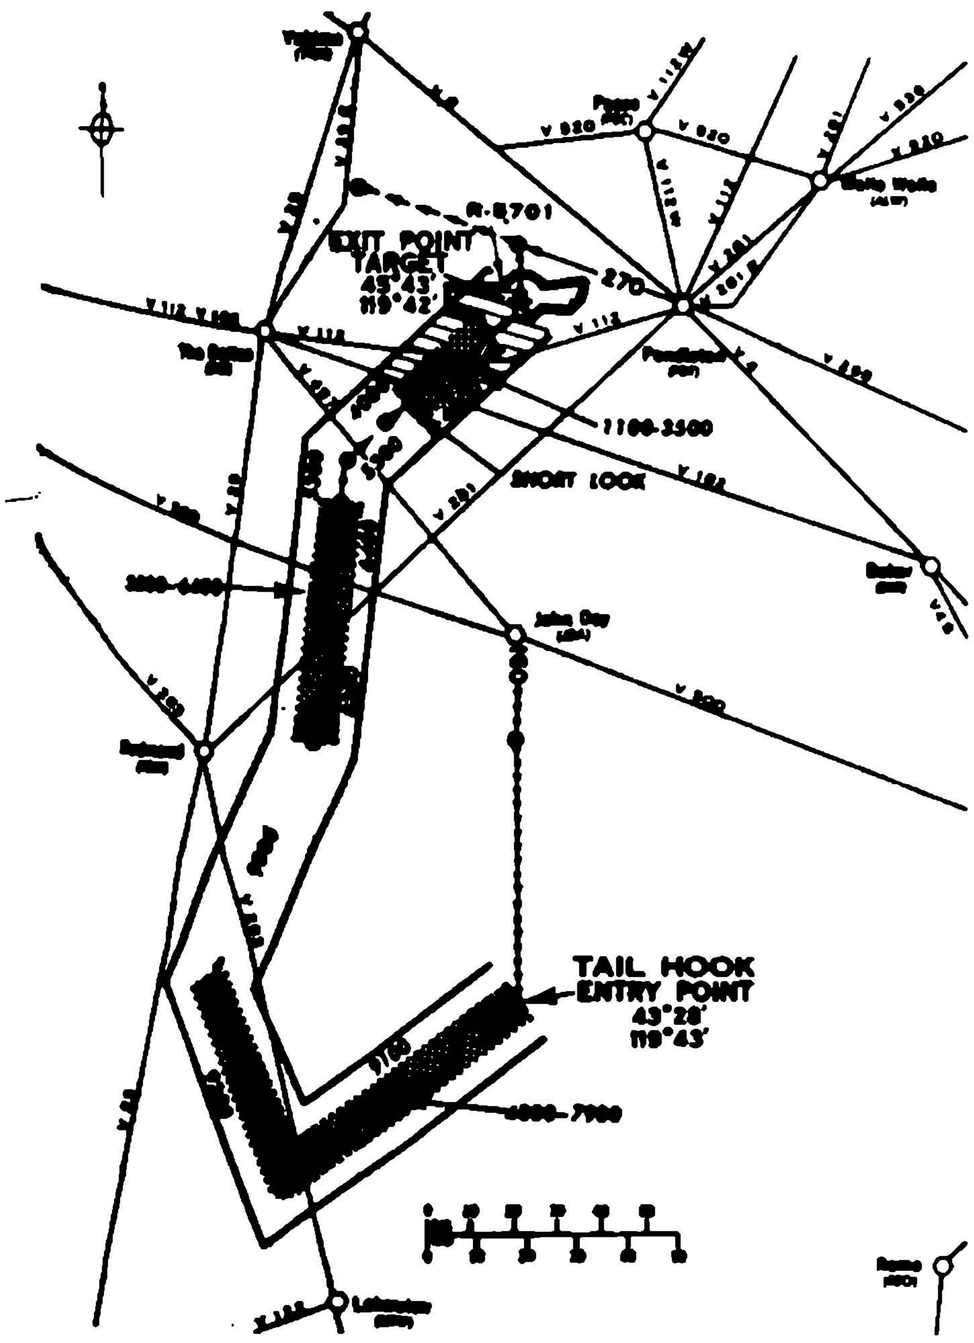
Hours of Operation—24 hours daily, 7 days a week.

OREGON

TAIL HOOK

Revised Effective February 12, 1964

Aircraft shall cross the John Day, Oregon VOR (reporting point) at 23,000′ MSL, or as assigned by Seattle ARTCC; then proceed via the John Day VOR 160° radial, maintaining assigned altitude until 20 nautical miles uth of the John Day VOR (44°19′N, 119°43′W); then scend to 9100′ MSL to the entry point of the low level ute at 43°28′N, 119°43′W; then 9100′ MSL direct to °54′N, 120°45′W; then climb to 9200′ MSL direct to



°31′N, 121°08′W; then descend to 9000′ MSL direct to °18′N, 120°39′W; then descend to 8300′ MSL direct 44°40′N, 120°36′W; then descend to 6400′ MSL direct 45°05′N, 120°31′W; then descend to 5300′ MSL direct 45°13′N, 120°30′W; then 5300′ MSL direct to 45°20′N, 0°19′W; then descend so as to cross 45°23′N, 120°13′W 4000′ MSL.

Short Look—After passing 45°23′N, 120°13′W, aircraft shall maintain 4000′ MSL until within Restricted Area R-5701; after crossing RBS target located at 45°43′N, 119°42′W, the route exit point, aircraft shall make a climbing left turn so as to intercept the Pendleton, Oregon VORTAC 270° radial 34 nautical mile fix (reporting point) at or above 11,000′ MSL; then climb westbound on the Pendleton VORTAC 270° radial so as to cross the Pendleton VORTAC 270° radial 68 nautical mile fix at 23,000′ MSL.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′ visibility five miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 43°28′N, 119°43′W to 43°31′N, 121°08′W, from 44°18′N, 120°39′W to 45°05′N, 120°31′W, and from 45°23′N, 120°13′W to restricted area R-5701. During daylight hours, VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness shall not be flown lower than 800′ above terrain. The lower VFR altitude shown on the chart is the minimum altitude that shall be reached on each route segment during daylight hours.

Hours of Operation—1600Z to 2400Z Monday thru Friday and 0000Z to 0800Z Tuesday thru Saturday.

GEORGIA/NORTH CAROLINA/SOUTH CAROLINA

WALNUT GROVE

Revised Effective January 4, 1965

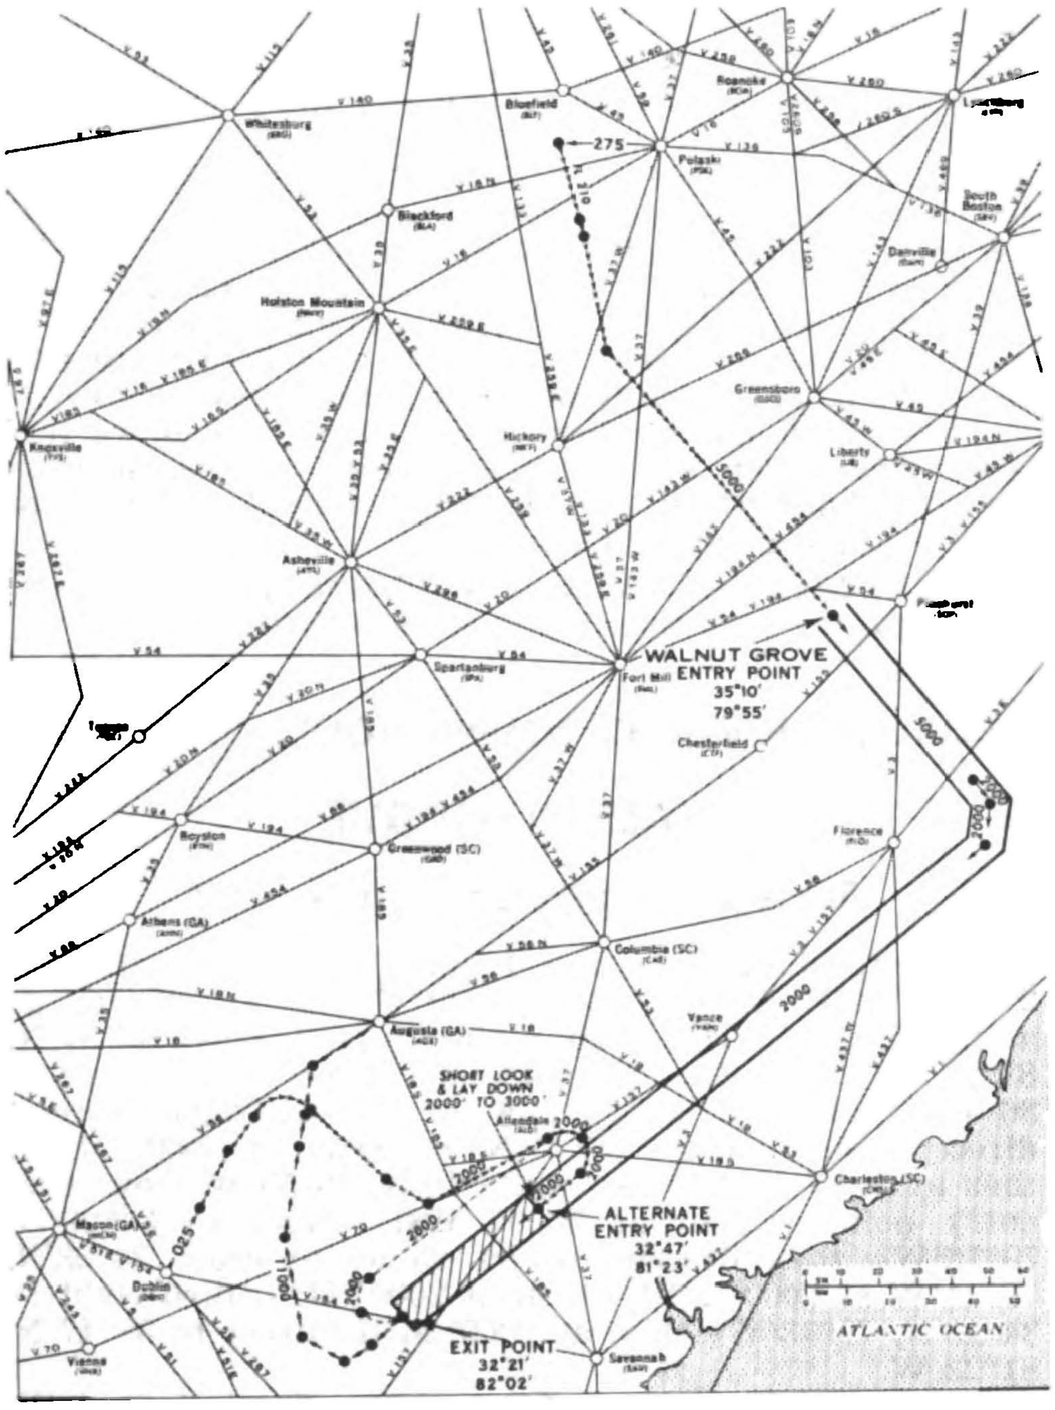
Aircraft shall cross the Pulaski, Virginia VORTAC 275/25 DME fix (37°06′N, 81°14′W) at FL 210 or as assigned by ARTCC; then maintain and cross 36°47′N, 81°08′W at FL 210; then descend direct so as to cross 36°43′N, 81°07′W at FL 180 or above; then descend direct so as to cross 36°15′N, 81°00′W at 5000′ MSL; then at 5000′ MSL direct to 35°10′N, 79°55′W (low level entry point); then at 5000′ MSL direct to 34°29′N, 79°16′W; then descend direct so as to cross 34°23′N, 79°11′W at 2000′ MSL; then at 2000′ MSL turn right to 34°13′N, 79°13′W; then at 2000′ MSL direct to 32°47′N, 81°23′W.

Short Look and Lay Down—After passing 32°47′N, 81°23′W aircraft shall maintain between 2000′ MSL and 3000′ MSL through the bomb run corridor (5 SM either side of center line from 32°47′N, 81°23′W to 32°21′N, 82°-02′W). After exiting the route at 32°21′N, 82°02′W, aircraft shall climb to or maintain 3000′ MSL to 32°-14′N, 82°10′W; then climb direct so as to cross 32°10′N, 82°18′W at 6000′ MSL; then climb direct so as to cross 32°16′N, 82°30′W at 11,000′ MSL; maintain 11,000′ direct 32°40′N, 82°35′W; then climb direct so as to cross 33°02′N, 82°31′W at FL 180; cross 33°10′N, 82°29′W at FL 200; cross 33°22′N, 82°27′W at FL 230 or as assigned; then at FL 230 or as assigned direct to the Augusta, Georgia VOR.

Re-Entry—Aircraft that are scheduled to execute an additional bomb run shall, after exiting the low level route at 32°21′N, 82°02′W, turn right and descend or maintain 2000′ MSL to 32°22′N, 82°13′W; then at 2000′ MSL continue turn to 32°30′N, 82°11′W; then at 2000′ MSL direct to 33°04′N, 81°20′W; then at 2000′ MSL turn right to 33°04′N, 81°10′W; continue turn to 32°-55′N, 81°11′W; then at 2000′ MSL direct to 32°47′N, 81°23′W; thence via the published route.

Alternate Entry—Aircraft shall cross the Dublin, Georgia VOR (32°31′N, 83°08′W) at FL 260 or as assigned; then descend direct via the Dublin VOR 025° radial so as to cross 32°47′N, 82°59′W at FL 230; cross 33°01′N, 82°51′W at 17,000′ MSL; cross 33°09′N, 82°44′W at

15,000′ MSL; turn right to cross 33°11′N, 82°28′W at 13,000′ MSL; cross 32°54′N, 82°06′W at 3000′ MSL; then descend direct so as to cross 32°48′N, 81°54′W at 2000′ MSL; then at 2000′ MSL direct to 33°04′N, 81°20′W; then at 2000′ MSL turn right to 33°04′, 81°10′W; continue turn to 32°55′N, 81°11′W; then at 2000′ MSL direct to intercept the Walnut Grove route at 32°47′N, 81°23′W.



Route Width—The entire route width is reduced to 5 SM either side of centerline.

Hours of Operation—Primary entry 1900Z to 2300Z and from 0100Z to 1400Z, 7 days per week; alternate entry 24 hours per day, 7 days per week.

COLORADO/KANSAS/NEW MEXICO

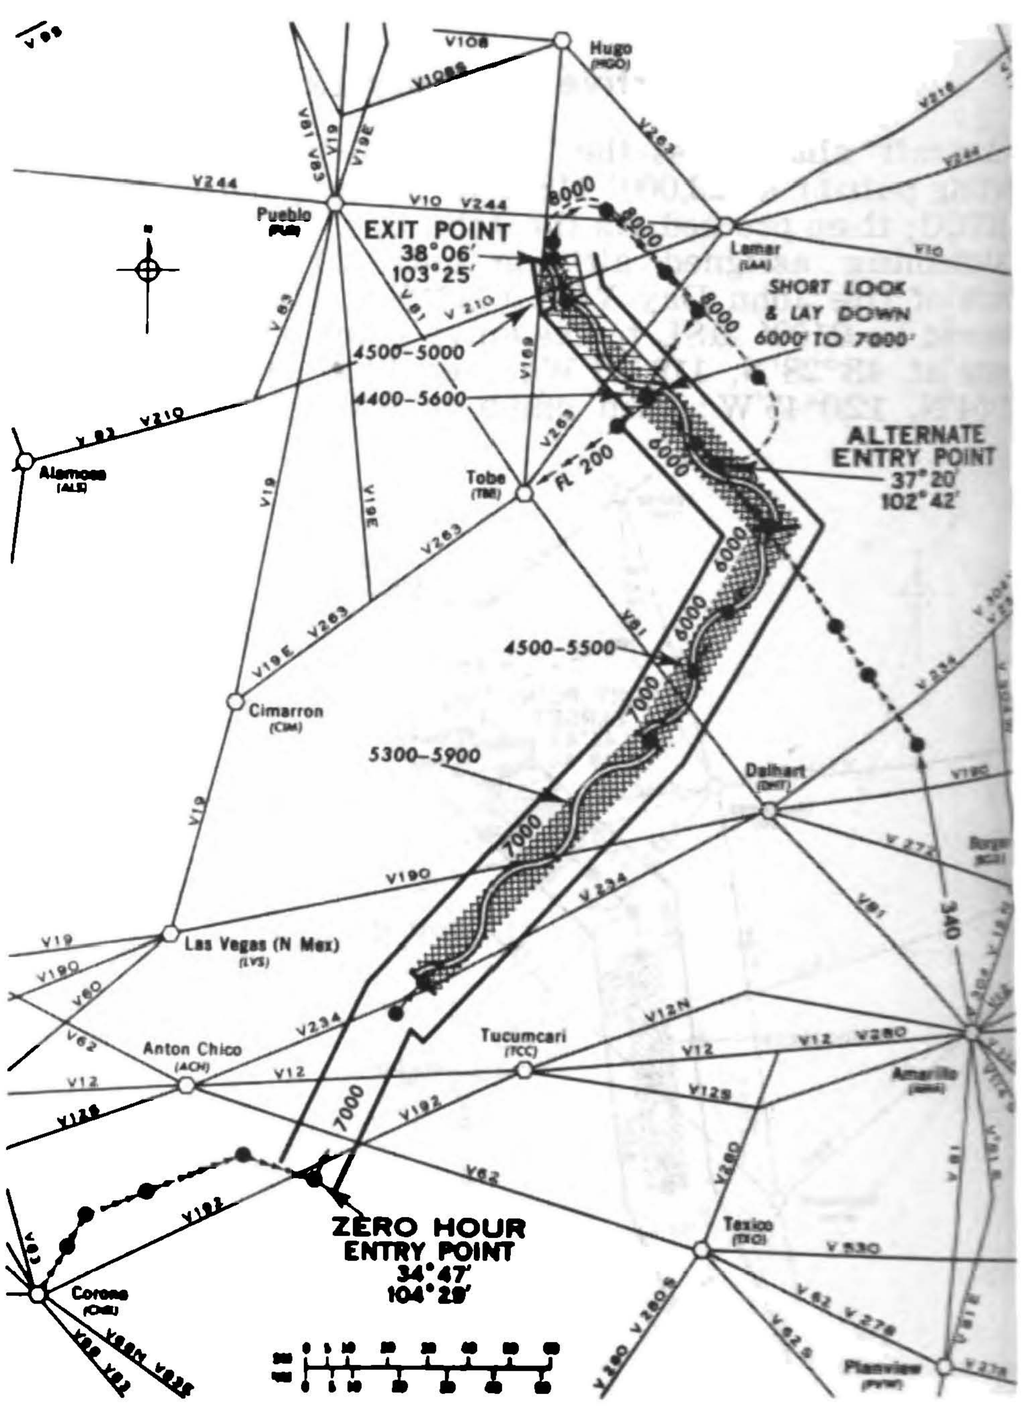
OKLAHOMA/TEXAS

•ZERO HOUR

Revised Effective March 3, 1965

Aircraft shall cross 34°22′N, 105°40′30″W (Corona, New Mexico VOR) (reporting point) at FL 250 or as assigned by ATC, then descend direct to cross 34°33′N, 105°33′W at or below FL 230; then descend direct to cross 34°40′N, 105°28′W at FL 220; then descend direct to cross 34°45′N, 105°12′W at or below 17,000′ MSL; then descend direct to cross 34°53′N, 104°48′W at 10,000′ MSL; then descend direct to cross the route entry point at 34°47′N, 104°29′ W at 7000′ MSL, maintain 7000′ MSL direct to 35°24′N, 104°08′W; then 7000′ MSL direct to 36°22′N, 103°00′W; then 7000′ MSL direct to 36°37′N, 102°49′W; then descend direct to cross 36°49′N, 102°40′W at 6000′ MSL; then 6000′ MSL direct to 37°06′N, 102°27′W; then 6000′ MSL direct to 37°36′N, 103°00′W.

Short Look and Lay Down—After passing 37°36′N, 103°00′W, aircraft shall maintain between 6000′ MSL and 7000′ MSL thru the bomb run corridor (5 SM either side of centerline from 37°36′N, 103°00′W to 37°57′N, 103°22′W to 38°06′N, 103°25′W). After exiting the route at 38°06′N, 103°25′W climb direct to cross 38°09′N, 103°26′W at 8000′ MSL, turn right, maintain 8000′ MSL to 38°15′N, 103°10′W, then 8000′ MSL direct to 38°02′N, 102°55′W, then climb direct to cross 37°53′N, 102°45′W at 9000′ MSL, continue climb direct to cross 37°30′N, 103°08′W at FL 200; then maintain FL 200 direct to Tobe VORTAC.



Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°06′N, 103°25′W, climb direct to cross 38°09′N, 103°26′W at 8000′ MSL, maintain 8000′ MSL right turn to 38°15′N, 103°10′W, then 8000′ MSL direct to 37°40′N, 102°30′W; then turn right descending to cross 37°24′N, 102°47′W at 6000′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 35°30′N, 104°01′W to 38°06′N, 103°25′W. During daylight hours, some VFR operations will be flown 500′ above the immediate ter-

In VFR operations conducted during the hours of ...ness will not be flown lower than 800' above the ...rain. The lower VFR altitude shown on the chart is ...e minimum that will be reached on each segment during ...flight hours.

Alternate Entry—Aircraft shall cross 36°19'N, 101°51'W (Amarillo VORTAC 340/62) at FL 230, or as assigned by ...C, then descend direct to cross 36°34'N, 102°03'W at ...00' MSL; then descend direct to cross 36°44'N, 102°-W at 14,000' MSL; then descend direct to cross 37°-06'N, 102°27'W at 11,000' MSL; then descend direct to cross 37°20'N, 102°42'W at 6000' MSL; thence via the published route.

Route Width—The route width from 34°47'N, 104°29'W to 35°24'N, 104°08'W is reduced to 5 SM on the east side of centerline, and from 37°36'N, 103°00'W, to 38°06'N, 103°25'W, the route is reduced to 5 SM on the west side of centerline.

Hours of Operation—24 hours daily, 7 days per week.

STANDARD INSTRUMENT APPROACH PROCEDURES ACTIONS

The following Standard Instrument Approach Procedures will be revised, established, or cancelle effective Feb 27, 1965:

Location	Procedure	Action

AIRMAN'S INFORMATION MANUAL
PUBLICATION SCHEDULE—FY 1965

Copy for inclusion in the Airman's Information Manual must be received no later than 0001 EST on the dates reflected in the schedules listed below, in order to assure its publication in the issue specified. Although the dates listed are the actual cut-off times, every effort should be made to submit copy as far in advance of these dates as possible.

Latest Dates for submission of copy for each Issue and Section

Effective Date	Section I	Section II	Section III	Section III—A	Section IV	Section IV—A
March 4		February 8	February 16	February 16		February 16
March 18				March 8		
April 1			March 15	March 15		March 15

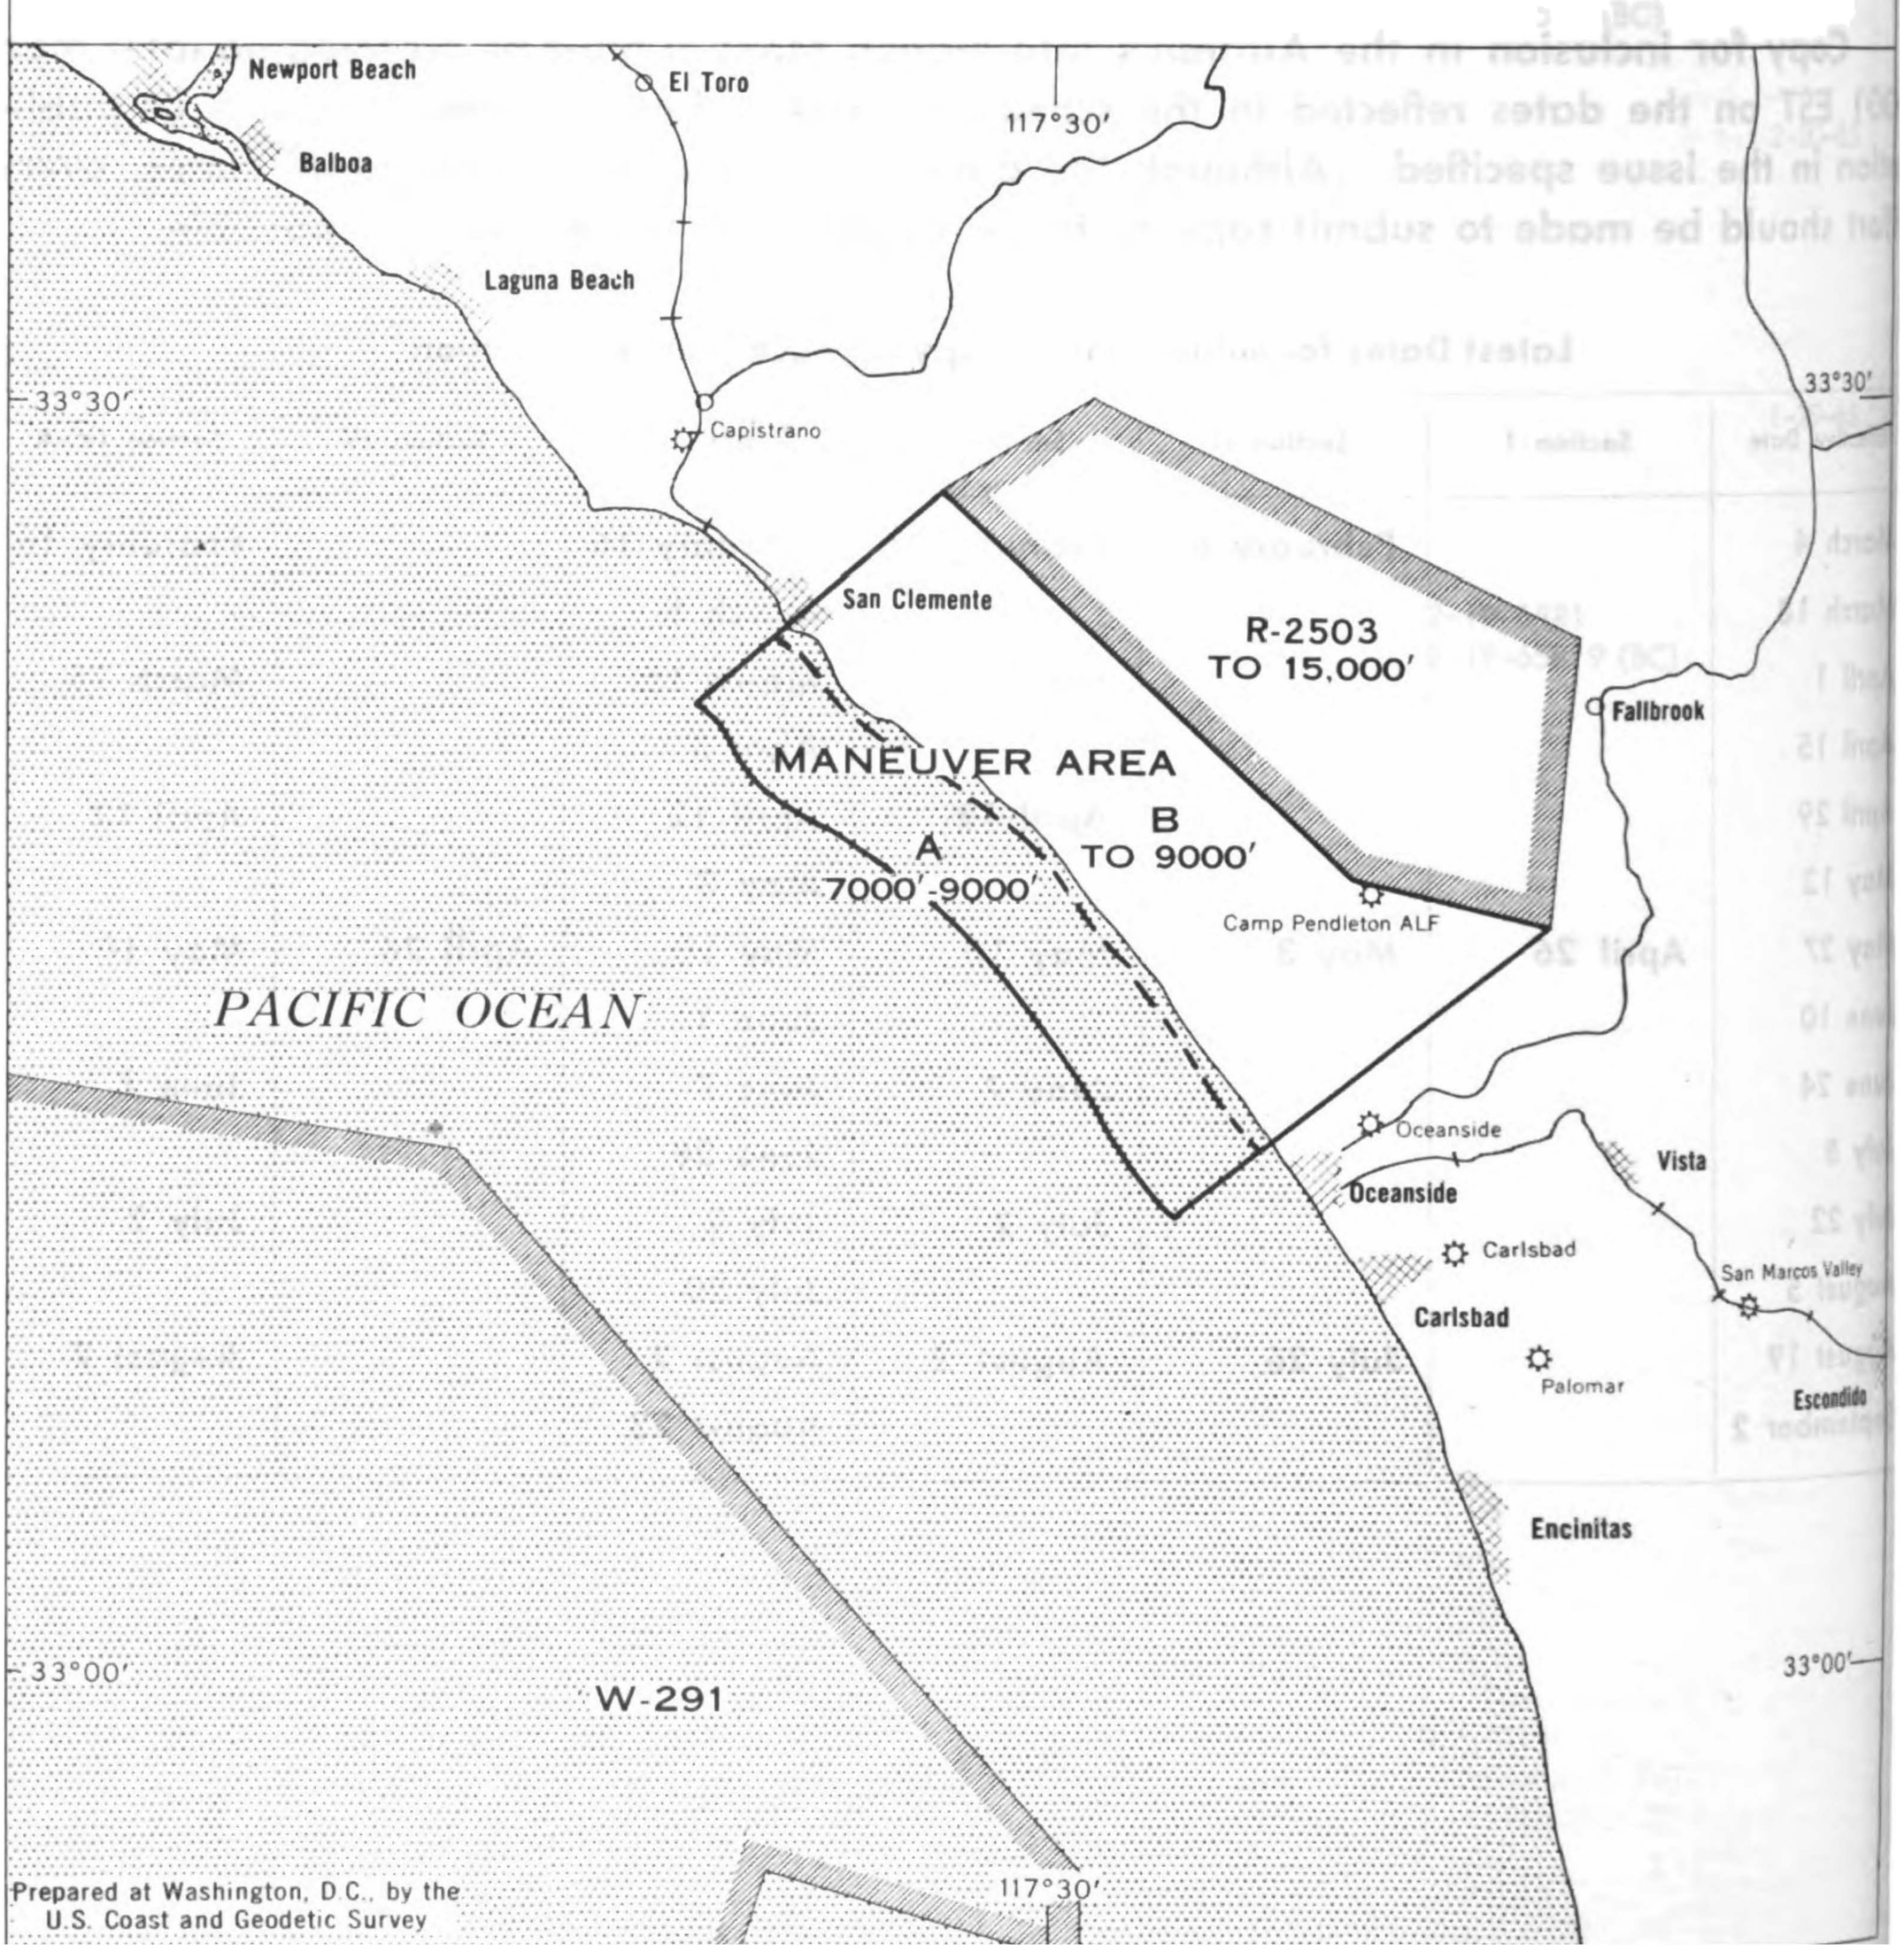
OCEANSIDE

SILVER LANCE MILITARY EXERCISE

***Maneuvers, including air support to Marine Corps landing exercises** are being conducted in the charted area. Pilots should contact Oceanside, San Diego, Thermal, **Long** Beach, Ontario and Los Angeles FSS for information pertaining to air activity during daylight hours on the maneuver dates*, Feb. 23 - Mar. 12, 1965



AIRMAN'S INFORMATION MANUAL

FLIGHT DATA AND SPECIAL OPERATIONS

SECTION III

EFFECTIVE 0501 Z **1 APRIL 1965**

To 0501 Z **29 APRIL 1965**

FEDERAL AVIATION AGENCY

AIRMAN'S INFORMATION MANUAL

INTRODUCTION

This Airman's Information Manual (AIM) has been developed by the Federal Aviation Agency as a pilot's operational manual replacing the Airman's Guide, Directory of Airports and Seaplane Bases, and the Flight Information Manual within the conterminous United States. The existing Alaska Airman's Guide and Chart Supplement and the Pacific Airman's Guide and Chart Supplement will continue to be published every 28 days.

The new AIM presents, in a single document, all information necessary for the planning and conduct of a flight in the National Airspace System. The content and format reflect user identified requirements and provide a "one package" approach.

The manual is divided into six sections, each composed of a specific category or family of information, fashioned into a format consistent with the operational needs of aviation. In contradistinction to previous flight information publications issued by FAA, the design concept of the AIM has provided for consolidation of similar information, segregation of air traffic control procedural information and its sequencing according to operational use, and the elimination of administrative and non-essential data.

The AIM is designed to be carried in the cockpit and may be used collectively or independently by sections. The manual is published as loose-leaf pages, and is three-hole punched to fit a standard three-ring binder.

New or amended textual or tabulated information except in the Airport/Facility Directory, is indicated by a solid dot ● prefixing the heading, paragraph, or line.

Each section of the AIM will be published at varying intervals during the year, depending on the stability or frequency or change of the information.

The various sections and the revision cycle of each are:

Section I	**Basic Flight Manual**	**Semi-annually**
Section II	**ATC Operations and Procedures**	**Quarterly**
Section III	**Flight Data and Special Operations**	**Every 28 days**
Section III–A	**Notices to Airmen**	**Every 14 days**
Section IV	**Airport Directory**	**Semi-annually**
Section IV–A	**Airport/Facility Directory**	**Every 28 days**

The above schedule provides a completely new manual every 6 months.

The revision cycle of Sections III and IV–A is every 28 days, the same as the IFR Enroute charts. Since the charts contains basically enroute information, the AIM serves as a supplementary publication, providing information for planning and terminal operations. Therefore, radio navigation aids are on the charts and unlike the Airman's Guide, are not tabulated in the AIM. Every effort has been made to minimize and eliminate duplication of information within publicatons and between publications and charts.

A brief description of the contents of each section in the AIM follows.

Section I—Basic Flight Manual

This section contains information of an instructional, educational, and training nature, assembled and presented in a systematic format, categorized by subject matter. The novice pilot, as well as the more experienced pilot will find here the basic fundamentals of knowledge for operating in the National Airspace System, information on adverse factors affecting safety of flight and health, and a list of available publications of general operational interest.

Section II—ATC Operations and Procedures

Section II is designed to serve as an official means of disseminating pertinent ATC information of interest to all pilots. The information governing flight operations, air traffic services, and procedures is presented in layman's language and avoids ambiguities which often result from individual interpretations of rules. Data is sequenced in accordance with typical flight operations: Preflight, departure, enroute, arrival and landing procedures. In addition, supporting general procedures and information such as ADIZ, and SCATER procedures is included. Emergency procedures are combined and published at the end of the section.

Section III—Flight Data and Special Operations

Operational data most subject to change and which is not appropriate for inclusion within other sections of the AIM is carried in Section III. Because it contains critical flight data most subject to change, this section should be kept close at hand in the event of a divergence in enroute flight. Some of the most significant material contained in Section III is described below.

A glossary or explanation of aeronautical term or phrases used in the AIM, and a list of commonly used abbreviations.

Special Notices of pertinent current information of operational value for both preflight planning and enroute operations. These Special Notices are divided into three categories: General Notices—those of a general nature with universal application; Area Notices—those pertinent to a specific geographical area; and Regulatory Notices—these are condensations of changes to or new rules, parts, Advisory Circulars, Special Procedures and other regulatory matters of operational interest.

A Sectional Chart Bulletin, as a means of updating the Sectional Charts, providing a cumulative tabulation of the major changes in aeronautical information occurring since the last chart publication date.

Detailed description tabulations and charts of Special Operations such as Oil Burner Routes and military refueling tracks.

Section III—A—Notices to Airmen

This section serves as a supplement, issued every fourteen days, to the AIM and provides operationally required data pertinent to the continuous NOTAMs carried in the daily teletypewriter NOTAM Summary (NOSUM), revisions to Oil Burner routes, and those airman advisories deemed essential to the safe conduct of flight.

Sections IV and IV-A—Airport Directory

Within Sections IV and IV-A there are provided an Airport Directory, a tabulation of ARTCC communications, frequencies, and a tabulation of Flight Service Stations.

Section IV contains the Airport Directory which is a listing of all known airports, heliports, and seaplane bases available for transient civil use within the conterminous United States, and indicates those airport services and facilities available at each. The seaplane tabulation and the heliport tabulation follow the airport tabulation. Military airports and privately owned and operated airports closed to civil aviation are not listed.

Section IV-A contains an Airport/Facility Directory providing an integrated tabulation of major airports, heliports and seaplane bases which have terminal navaids and communications facilities available at the airport. This tabulation combines all facilities and services available at each airport (heliport or seaplane base) or terminal area into a single listing.

In both Sections IV and IV-A, airports are listed alphabetically by geographical location (city or town) within each state. Airports tabulated in IV-A are cross-referenced in Section IV.

In Section IV-A, the Airport/Facility Directory is followed by the tabulation of all ARTC Center VHF communications frequencies. This, in turn, is followed by the tabulation of FSS's, which shows their telephone numbers, the number of the associated Weather Bureau Office, and other pertinent data.

The Master Alphabetical Indext of the entire Manual is provided in this Section. This complete and comprehensive index lists all items of information, cross referenced

under all headings to which reference might reasonably be made, giving section and page number. Within the index, any reference involving emergency actions or procedures is printed in bold-face type.

Errors, Omissions, or Suggested Changes

Errors, omissions, or suggested changes should be forwarded to the Federal Aviation Agency, Air Traffic Service, Attention AT-600, Washington, D.C. 20553. Airport managers, operators and owners are urged to review data for their airport and report any errors or omissions to FAA at the address given above.

Procurement

The Airman's Information Manual is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Orders should be accompanied by check or money order made payable to the Superintendent of Documents.

INTRODUCTION

Section III—FLIGHT DATA AND SPECIAL OPERATIONS

Section III is published every 28 days and contains operational flight data most subject to continuous change that is not appropriate for inclusion within other sections of the Manual. Because it contains such critical flight data, this section should be kept close at hand in the event of a divergence in en route flight.

The information in Section III is presented in various tabulations or grouping arrangements appropriate to the specific items. Typical examples are: Preferred Routes, VOR Receiver Check Points, Parachute Jumping Areas, and Substitute Route Structures.

As a means of updating the Sectional Charts produced by the Coast and Geodetic Survey, Department of Commerce, a Sectional Chart Bulletin is included in Section III. This bulletin provides a cumulative tabulation of the major changes in aeronautical information that have occurred since the last publicaton date (normally every 6 months) of each sectional chart. Only those changes to controlled airspace and special use airspace, airports, and radio navigation facilities that present a hazardous condition or impose a restriction on the pilot are listed, thereby continually providing the VFR pilot with the essential data for keeping his sectional charts current until they are reissued.

At the end of Section III are grouped detailed tabulations and charts of special operations and areas such as Oil Burner Routes, and military low altitude refueling tracks. This arrangement provides a consolidated presentation of areas and special operations that are not designated through rule-making procedures.

GLOSSARY OF AERONAUTICAL TERMS

R DEFENSE IDENTIFICATION ZONE (ADIZ)—The area of air-ace over land or water within which the ready identi-ation, the location, and the control of aircraft are re-ired in the interest of national security. For operat-g details see ADIZ procedures.

IPORT ADVISORY AREA—The area within five statute ies of an uncontrolled airport on which is located a ight Service Station so depicted on the appropriate ctional Aeronautical Chart.

IPORT ADVISORY SERVICE—A service provided by a Flight rvice Station to enhance the safety of terminal oper-ons of airports where a station is operating but where re is no control tower.

IPORT SURFACE DETECTION EQUIPMENT (ASDE)—Radar ipment specifically designed to detect all principal tures on the surface of an airport, including vehicular ffic, and to present the entire picture on a radar indi-or console in the control tower. ASDE has a maxi-m range of four miles, though its 16 inch diameter pe usually displays an area of only one mile radius ut the control tower.

IPORT SURVEILLANCE RADAR (ASR)—Radar providing posi-n of aircraft by azimuth and range data without ele-tion data. It is designed for a range of 50 miles.

IPORT TRAFFIC AREA—The airspace within a circular it defined by a five statute mile horizontal radius m the geographical center of an airport at which an rative airport traffic control tower is located and ex-ding upwards from the surface to, but not including, 0 feet above the surface.

ROUTE SURVEILLANCE RADAR (ARSR)—Long range radar ich increases the capability of ATC for handling heavy route traffic. An ARSR site is usually located at some tance from the ARTCC it serves.

ROUTE TRAFFIC CONTROL CENTER (ARTCC)—A facility ablished to provide traffic control service to Instru-nt Flight Rules (IFR) flights operating within con-lled airspace and principally during the en route se of flight.

ITUDE RESERVATION (ALTRV)—Airspace utilization under scribed conditions, normally employed for the mass vement of aircraft or other special user requirements ich cannot otherwise be accomplished. ALTRV's are roved by the appropriate FAA facility.

ROACH CONTROL SERVICE—Air traffic control service, vided by a terminal area traffic control facility, for iving and or departing IFR flights and, on occasion, R flights.

AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)—The continuous broadcast of recorded noncontrol information in selected high activity terminal areas. Its purpose is to improve controller effectiveness and to relieve frequency congestion by automating the repetitive transmission of essential but routine information.

CARDINAL ALTITUDES OR FLIGHT LEVELS—"Odd" or "even" thousand-foot altitudes or flight levels. Examples: 5000, 6000, 7000, FL 250, FL 260, FL 270.

CEILING—The height above the ground or water of the lowest layer of clouds or obscuration phenomena that is reported as "broken," "overcast," or "obscuration" and not classified as "thin" or "partial."

CENTRAL ALTITUDE RESERVATION FACILITY (CARF)—An Air Traffic Service facility established to conduct the volume of coordination, planning and approval of special user requirements under the altitude reservation concept.

CONSOLAN—A low frequency, long-distance navaid used principally for transoceanic navigation.

CONTERMINOUS U.S.—Forty-eight states and the District of Columbia.

CONTINENTAL CONTROL AREA—The area, which includes that airspace within the contermious United States at and above 14,500 feet MSL, excluding airspace less than 1,500 feet above terrain, and prohibited and restricted areas (except certain specified restricted areas).

CONTINENTAL U.S.—Forty-nine states. The original 48 states and Alaska.

CONTROL AREA—Controlled airspace extending upwards from a specified height above the surface of the earth. Unless otherwise provided in appropriate cases, control areas extend upward from 700 feet above the surface until designated from 1,200 feet above the surface or from at least 500 feet below the MEA, whichever is higher, to the base of the continental control area.

CONTROL ZONE—Controlled airspace extending upwards from the surface of the earth. Control zones may include one or more airports and are normally circular areas 5 statute miles in radius with extension where necessary to include instrument approach and departure paths.

CRUISE—The term "cruise" used instead of "maintain" in an ATC clearance indicates that descent from cruising altitude may be commenced at pilot's discretion without further clearance from ATC. "Cruise" is normally used only on relatively short flights in uncongested areas, and is authorization for the flight to proceed to, and make an approach at, destination.

DISCRETE FREQUENCY—A frequency assigned a particular function.

EXPECTED APPROACH CLEARANCE TIME (EAC)—The time at which it is expected that an arriving aircraft will be cleared to commence approach for a landing.

FINAL APPROACH—IFR—The flight path of an aircraft which is inbound to the airport on an approved final instrument approach course, commencing at the point of interception of said course and extending to the airport or the point where circling for landing or missed approach is executed.

FINAL APPROACH—VFR—A flight path of a landing aircraft in the direction of landing along the extended runway center line from the base leg to the runway.

FIX—A geographical position determined visually, by reference to one or more radio navigational aids, by celestial plotting, or by another navigational device.

FLIGHT ADVISORY SERVICE—Advice and information provided by a facility to assist pilots in the safe conduct of flight.

FLIP—Flight Information Publication.

FLIGHT LEVEL (FL)—A level of constant atmospheric pressure related to a reference datum 29.92" HG. For example: Flight Level 250 is equivalent to an altimeter indication of 25,000 feet, and Flight Level 265 to 26,500 feet.

FLIGHT SERVICE STATION (FSS)—A facility operated by the FAA to provide flight assistance service.

IFR CONDITIONS—Weather conditions below the minimum prescribed for flights under VFR.

INITIAL APPROACH—Initial approaches to a facility are normally made over specified routes to the primary navigation facility. When the approach fix is not the primary navigation facility, the transition routes are specified and shown on the particular AL chart. The minimum en route altitude for the route along which the pilot has been flying is normally used as the initial approach altitude. The high level initial approach altitude is usually termed "Initial Penetration Altitude" and is considered as the altitude at which the aircraft begins a penetration. This altitude is established for each particular procedure and is indicated on the associated AL chart.

INTERROGATOR—The ground-based surveillance radar beacon transmitter-receiver which scans in synchronism with a primary radar, transmitting discrete radio signals which repetitiously request all transponders, on the mode being used, to reply. The replies received are then mixed with the primary radar video to be displayed on the same plan position indicators.

JET ROUTES—A high altitude route system, at and above 18,000 feet MSL, predicated on a network of designated high altitude VHF/UHF facilities. (For operating procedures applicable to this system see ENROUTE).

JOINT USE RESTRICTED AREA—An area wherein an aircra may operate if prior permission has been granted b either the restricted area "using agency" or the "co trolling agency." (1) The using agency organization, military command whose activity within a restricte area necessitated the area being so designated; exce that, in the case of those Restricted Area/Military Cli Corridors which do not have a designated controlli agency, the using agency is a military air traffic contr facility which may be contacted for transit through t climb corridor. The using agency notifies the controlli agency whenever permission may be granted by t controlling agency for transit of, or flight within a r stricted area. (2) The controlling agency is a designat FAA facility which may authorize transit of a restrict area.

MAINTAIN—The altitude/flight level instructions in ATC clearance normally require that a pilot "maintai the altitude/flight level at which the flight will opera when in controlled airspace. Altitude/flight lev changes while en route should be requested prior to t time the change is desired.

MAXIMUM AUTHORIZED ALTITUDE (MAA)—The highest al tude on a Federal airway, jet route, or other direct rou for which a MEA is designated in F.A.R. Part 95 which adequate reception of navigation aid signals assured.

MINIMUM CROSSING ALTITUDES (MCA)—The lowest altitud at certain radio fixes at which an aircraft must cr when proceeding in the direction of a higher minim en route IFR altitude.

MINIMUM EN ROUTE IFR ALTITUDE (MEA)—The altitude effect between radio fixes which assures acceptable na gational signal coverage and meets obstruction clearan requirements between those fixes.

MINIMUM OBSTRUCTION CLEARANCE ALTITUDE (MOCA)—T specified altitude in effect between radio fixes on VO airways, off-airway routes on route segments, whi meets obstruction clearance requirements for the ent route segment and which assures acceptable navigation signal coverage only within 22 nautical miles of a VO

MINIMUM RECEPTION ALTITUDE (MRA)—The lowest altitu required to receive adequate signals to determine spec VOR/VORTAC/TACAN fixes.

MODE—The number or letter referring to the specif pulse spacing of the signal transmitted by an interro tor.

RADAR BEACON (SECONDARY RADAR)—A radar system in which the object to be detected is fitted with cooperati equipment in the form of a radio receiver/transmitt (transponder). Radio pulses transmitted from th searching transmitter/receiver (interrogator) site ar received in the cooperative equipment and used to tri ger a distinctive transmission from the transponde This latter transmission, rather than a reflected sign is then received back at the transmitter/receiver site

ADAR ADVISORY SERVICE—The provision of advice or information based on radar observation.

ADIAL—A radial is a magnetic bearing extending from VOR, VORTAC, or TACAN.

IMARY RADAR—A radar system in which a minute portion of a radio pulse transmitted from a site is reflected an object and then received back at that site.

OHIBITED AREA—Designated airspace within which the ght of aircraft is prohibited.

RGET—The indication displayed on a radar scope resulting from a primary radar return or a radar beacon ply.

ANSITION AREA—An area extending upward from 1,200 t or higher above the surface when designated to nplement control zones; from 700 feet above the surce when designated in conjunction with an airport with control zone but for which an instrument approach cedure has been prescribed; or from 1,200 feet or her above the surface when designated in conjuncn with airway route structures or segments. Unless erwise limited, transition areas terminate at the base the overlying control area or Continental Control Area.

ANSPONDER—The airborne radar beacon receiver-transter which automatically receives radio signals from interrogators on the ground, and selectively replies h a specific reply pulse or pulse group only to those terrogations" being received on the mode to which it et to respond.

TOR—A heading issued to the pilot for the purpose of oviding navigational guidance by means of radar.

IBILITY, PREVAILING—The horizontal distance at which gets of known distance are visible over at least half the horizon. It is normally determined by an observer or close to the ground viewing buildings or other ilar objects during the day and ordinary city lights night. Under low visibility conditions the observans are usually made at the control tower. Visibility REPORTED IN MILES AND FRACTIONS OF LES in the Aviation Weather Report. If a single ue does not adequately describe the visibility, additional information is reported in the "Remarks" section of the report.

VISIBILITY, RUNWAY—The horizontal distance at which a stationary observer near the end of the runway can see an ordinary light (about 25 candlepower) at night or a dark object against the horizon sky in the daytime. In practice the human observer is used very little for this observation. Instead runway visibility is normally determined by a transmissometer (a photoelectric device calibrated in terms of a human observer). It is REPORTED IN MILES AND FRACTIONS OF MILES in the "Remarks" section of the Aviation Weather Report. A meter in the control tower gives the FAA traffic controller a continuous indication of the runway visibility at transmissometer locations. Runway visibility, where available, is used in place of prevailing visibility for the determination of minimums on a transmissometer runway. This program is gradually being replaced by Runway Visual Range at transmissometer locations.

VISIBILITY, RUNWAY VISUAL RANGE (RVR)—An instrumentally derived value, based on standard calibrations, that represents the horizontal distance a pilot will see down the runway from the approach end; it is based on the sighting of either high intensity runway lights or on the visual contrast of other targets—whichever yields the greater visual range. RVR, in contrast to prevailing or runway visibility, is based on what a pilot in a moving aircraft should see looking down the runway. RVR is horizontal, AND NOT SLANT, visual range. It is based on the measurement of a transmissometer made near the touchdown point of the instrument runway and is REPORTED IN HUNDREDS OF FEET. At the present time, RVR observations are automatically furnished to FAA tower controllers at approximately 25 locations from readout equipment connected to the remote transmissometer installation. RVR provides an additional operating minimum at fields equipped with specified navigational aids. For example, at the present time the RVR minimum at Newark is 2000 ft. (in combination with a minimum descent altitude of 218' MSL) for both takeoffs and landings regardless of the reported ceiling and visibility.

VOT (VERY HIGH FREQUENCY OMNITEST)—A ground originating test signal used to check the accurate alignment of a VOR receiver.

ABBREVIATIONS

Note: "s" may be added for plural, or as appropriate.

acft..... aircraft
adjt..... adjacent
admin.... administration
AGL..... above ground level
Airgi..... Airguide
AL..... Approach and Landing Chart
alt..... altitude

vcnty.... vicinity
VFR ..... visual flight rules
VOR ..... VHF navigational facility—omnidirectional, course only
VOR-DME collocated VOR navigational facility and UHF standard navigational facility and UHF standard distance measuring equipment
VORTAC.. collocated VOR and TACAN navigational facilities
VOT a VOR Receiver Testing Facility
vsby ..... visibility
wea..... weather
WB..... Weather Bureau
WIP..... work in progress
wt..... weight

THE NOTAM CODE

INTRODUCTION

The NOTAM Code provides for coding NOTAM information to reduce telecommunications transmission time and reduce translation difficulties in the International Service.

A NOTAM Code group contains 5 letters. The first letter is always the letter Q to indicate a code abbreviation for use in the composition of NOTAMs. The letter Q has been chosen to avoid conflict with any assigned radio call sign.

NOTAM code significations shall be amplified or completed where necessary by adding appropriate words, contractions, frequencies, location identifiers, place names, or figures. Approved abbreviations shall be used in preference to plain language whenever possible. The information necessary to complete a NOTAM code group, as indicated by a blank space, shall be given except when (1) the blank spaces are enclosed within parentheses or brackets to indicate their completion is optional; e.g., LHX QIEIK 15 MIN. Meaning: the LaJunta Colorado airport beacon is available on request at 15 minutes' notice; or (2) an alternative meaning shown in parentheses is selected and the blank space in this alternative meaning is complete; e.g., QAPOK 116.9. Meaning: the radio range on 116.9 Mc. resumed normal operation.

Expressions or words in parentheses which do not include blank spaces have the following significances:

(1) When following a blank space, signifies the explanation of information to be used in filling the preceding blank.

(2) When following a word or expression, signifies an alternative to the word or expression.

CODE GROUP FORMATION

5-letter NOTAM code groups are formed in the following manner:

(1) First Letter.—The letter Q.

(2) Second and Third Letters.—The appropriate combination of 2 letters, selected from the "2nd and 3rd letters" section of the code, identify the facility, service or danger to aircraft in flight being reported. The *second* letter has been restricted to A, E, I, O, or U. These letters also serve to classify the aid, facility, or service described: i.e., the letters A and E signify radio aids. The letter I signifies lighting facilities. The letters O and U signify airports, search and rescue, and dangers to aircraft in flight.

(3) Fourth and Fifth Letters.—The appropriate cominbation of 2 letters, selected from the "4th and 5th Letters" section, denote the operating status of the facility, service, or danger to aircraft being reported. The *fourth* letter has been restricted to A, E, I, O, or U.

DECODE

SECOND AND THIRD LETTERS

2nd & 3rd Letters	SIGNIFICATION	2nd & 3rd Letters	SIGNIFICATION
	RADIO AIDS		
AA	. . . [*specify TWR, APP, ACC or FIC*] air traffic services receiver . . . kc/s. (*or* . . . Mc/s.).	AY	200 Mc/s. Distance Measuring Equipment.
AB	Inner marker, Instrument Landing System.	AZ	Station location marker VHF.
AC	. . . [*specify TWR, APP, ACC or FIC*] air traffic services transmitter . . . kc/s. (*or* . . . Mc/s.).	EA	En-route Surveillance Radar.
AD	Middle marker, Instrument Landing System.	EB	Broadcasting station (public).
AE	Outer marker, Instrument Landing System.	EC	CONSOL or CONSOLAN station.
AF	Fan-type marker.	ED	DECCA or DECTRA.
AG	Glide path, Instrument Landing System.	EE	Ground Controlled Approach System (GCA).
AH	Non-directional Beacon (NDB).	EF	Terminal Area Surveillance Radar.
AI	Instrument Landing System (ILS).	EG	Gee.
AJ	Radio range (other than VOR) and associated voice communications.	EH	Elevation element of the Precision Approach Radar (PAR).
AK	Radio receiving facilities.	EI	Monitoring device associated with . . . (*specify*) radio aid.
AL	Localizer, Instrument Landing System.	EJ	All air-ground facilities (except . . .).
AM	Locator, inner, Instrument Landing System.	EK	Precision Approach Radar (PAR).
AN	TACAN.	EL	LORAN.
AO	Locator, outers, Instrument Landing System.	EM	Azimuth element of the Precision Approach Radar (PAR).
AP	VOR (VHF Omnidirectional Radio Range) and associated voice communications.	EN	DME (1000 Mc/s. Distance Measuring Equipment).
AQ	VOR (VHF Omnidirectional Radio Range).	EO	Beam Approach Beacon System (BABS).
AR	Radio range (other than VOR).	EP	Radar responder beacon.
AS	Radio range leg.	EQ	Surveillance Radar Element (SRE) of GCA.
AT	Attentional signal.	ER	Radio transmitting facilities.
AU	Meteorological communications . . . kc/s. (*or* . . . Mc/s.).	ES	All radio-navigation facilities (except . . .).
AV	Voice communications . . . kc/s. (*or* . . . Mc/s.).	ET	Teletypewriter transmitting facility (ies).
AW	Unassigned.	EU	Radio direction-finding station . . . (*frequency or type*).
AX	Non-directional Beacon (NDB) and voice facility.	EV	VORTAC (the combination of VOR and TACAN).
		EW	Ground interrogator, SSR system.
		EX	Unassigned.
		EY	Ground movement radar.
		EZ	Unassigned.
	LIGHTING FACILITIES		
IA	Boundary lights.	ID	Channel lights.
IB	Aerodrome beacon.	IE	Light beacon.
IC	Unassigned.	IF	Floodlights.

DECODE

SECOND AND THIRD LETTERS (Contd.)

2nd & 3rd Letters	SIGNIFICATION	2nd & 3rd Letters	SIGNIFICATION
	LIGHTING FACILITIES (Contd.)		
IG	Angle-of-approach lights.	IP	Approach light system [type . . . {*specify LSA (low intensity) or LSB (high intensity*}] (for runway number . . .).
IH	Taxiway lights.		
II	Hazard beacon.		
IJ	Threshold lights (for runway number . . .).	IQ	Runway alignment beacon.
IK	Flares.	IR	Runway lights [type . . . {*specify LSA (low intensity) or LSB (high intensity)*}] (for runway number . . .).
IL	All landing area lighting facilities.		
IM	Identification beacon.	IS	Strip lights [for strip . . . (*number or magnetic direction*)].
IN	Unassigned.	IT–IY	Unassigned.
IO	Obstruction lights.	IZ	Airway course lights.
	AERODROMES — SEARCH AND RESCUE — DANGERS TO AIRCRAFT IN FLIGHT		
OA	Land aerodrome.	UB	Mooring buoys.
OB	Beaching facilities.	UC	Unassigned.
OC	Water aerodrome.	UD	Prohibited, restricted or danger area designated as . . . (*name or reference identification*).
OD	Meteorological forecast service.		
OE	Meteorological observation service.		
OF	Meteorological watch service.	UE	Aircraft.
OG	Runway arresting gear.	UF	Fixed balloons.
OH	Helicopter landing area.	UG	Bombing or aerial depth charge dropping.
OI–OL	Unassigned.		
OM	All runways [except number(s) . . .].	UH	Air exercises (*or* flying displays).
ON	Stopway for runway number.	UI	Gun or missile firing.
OO	Taxiway(s).	UJ	Glider flying.
OP	Rescue vessel.	UK	Demolition of explosives.
OQ	Ocean Station Vessel.	UL	Landing direction indicator.
OR	Refueling [. . . type fuel(s) *or* . . . octane].	UM	Mooring and docking facilities.
		UN	Parachute jumping exercises.
OS	Search and rescue aircraft [*specify VLR, LRG, MRG, SRG or HEL*].	UO–UP	Unassigned.
		UQ	Apron.
OT	Crash and fire fighting facilities.	UR	Runway(s) and number(s).
OU	Unassigned	US	Strip . . . (*number or magnetic direction*).
OV	. . . [*specify TWR, APP, ACC or FIC*] air traffic service.	UT	Grass landing area.
		UU	Unassigned.
		UV	Fog dispersal equipment.
OW–OY	Unassigned.	UW–UY	Unassigned.
OZ	Warship.	UZ	Runway threshold (number . . .).
UA	Alighting area.		

DECODE
FOURTH AND FIFTH LETTERS

4th & 5th Letters	SIGNIFICATION	4th & 5th Letters	SIGNIFICATION
	HAZARD OR STATUS OF OPERATION OR CONDITION OF FACILITIES		
AA	Unassigned.	**EC**	Characteristics *or* identification *or* radio call sign changed to . . .
AB	Usable for length of . . . and width of . . .	**ED**	Operating frequency(ies) will be changed to . . . kc/s. (*or* . . . Mc/s.) effective . . . (*date/time*).
AC	Covered by snow to a depth of . . . NOTE.—*This snow is not compacted.*	**EE–EG**	Unassigned.
AD	Cleared of soft snow, full length and width.	**EH**	Not heard.
AE	Totally free of snow and ice.	**EI–EL**	Unassigned.
AF	Covered by [. . . (*type*)] ice to a depth of . . .	**EM**	Military operations only.
AG–AH	Unassigned.	**EN**	Not available due to . . . (*specify reason*) from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
AI	Operating without tone modulation.	**EO**	Unassigned.
AJ	Operating without coding.	**EP**	Available on prior permission (of . . .) only.
AK	Covered by compacted snow to a depth of . . .	**EQ–ER**	Unassigned.
AL	Operating on reduced power.	**ES**	Out of service from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)] due to the following condition(s) . . .
AM	Snow clearance in progress [estimated time of completion is . . . (*date/time*)].	**ET**	Test operation only. NOT for operational use.
AN	Grass cutting in progress [estimated time of completion is . . . (*date/time*)].	**EU–EV**	Unassigned.
AO	Marked by . . .	**EW**	Completely withdrawn.
AP	Work is in progress [estimated time of completion is . . . (*date/time*)].	**EX**	Unassigned.
AQ	Work completed.	**EY**	Is outside the limits of its assigned ocean station.
AR	Snow clearance completed.	**EZ**	Is within the limits of its assigned ocean station.
AS	Grass cutting completed.	**IA–IB**	Unassigned.
AT	Sanding is in progress [estimated time of completion is . . . (*date/time*)].	**IC**	Report of apparent unreliability or track displacement hereby is cancelled.
AU	Appears unreliable.	**ID**	Available on request to . . .
AV	Covered by ice patches.	**IE**	Unassigned.
AW	Height of snowbanks is . . . (*figures and units*).	**IF**	Flight checked and found reliable.
AX	Braking action is . . . (A = *good*, B = *medium*, C = *poor*).*	**IG–IJ**	Unassigned.
AY	Are to avoid area, radius of danger being . . . (about the point . . .).	**IK**	Available on request (to . . .) immediately [*or* at . . . (*time period*) notice].
AZ	Will take place from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)] (on the days of . . . between the hours of . . . and . . .) at . . . (*location*) (within the sector of . . . and a radius of . . .) at . . . height above . . . (*datum*).	**IL**	Hours of service are now . . .
		IM	Unassigned.
		IN	Operative (*or* re-operative), activated (*or* re-activated) from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
EA	Unassigned.	**IO**	Operating normally.
EB	Location change to . . . effective . . . (*date/time*).		

DECODE

FOURTH AND FIFTH LETTERS (Contd.)

4th & 5th Letters	SIGNIFICATION
	HAZARD OR STATUS OF OPERATION OR CONDITION OF FACILITIES (Contd.)
IP	Track(s) reported to be displaced (. . . degrees) (. . . direction) of published bearing(s), other tracks probably have shifted.
IQ	To be used as radio beacon only.
IR	Magnetic track(s) towards station is are now . . . [will be . . . at . . . (*date/time*)].
IS	Operative (or *re*-operative) subject to conditions/limitations already published.
IT	Aircraft restricted to runways and taxiways.
IU	Unserviceable for aircraft heavier than . . . tons.
IV	Unsafe from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
IW–IZ	Unassigned.
OA–OF	Unassigned.
OG	Operative but ground checked only, awaiting flight check.
OH–OJ	Unassigned.
OK	Resumed normal operation.
OL	Track(s) ground checked, approved for instrument flying.
OM	Shut down for maintenance from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)]—disregard all signals.
ON–OQ	Unassigned.
OR	Previously promulgated shutdown has been cancelled.
OS	Unassigned.
OT	New facility in operation.
OU	Operating without interruption for voice transmissions from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
OV–OW	Unassigned.
OX	Exercising at . . . (*date/time, location and height above the specified datum*).
OY–OZ	Unassigned.
UA	Closed to all operations from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
UB–UC	Unassigned.
UD	Closed to all night operations from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)].
UE	Unassigned.
UF	Closed for an unknown duration due to flood.
UG	Closed for an unknown duration [*or* until . . . (*date/time*)] due to ice or snow.
UH	Closed for an unknown duration [*or* until . . . (*date/time*)] due to thaw.
UI	Closed from . . . (*date/time*) for an unknown duration [*or* until . . . (*date/time*)] for maintenance.
UJ–UL	Unassigned.
UM	Operating in an unmonitored status.
UN–US	Unassigned.
UT	Operative but caution advised due to following condition(s) . . .
UU	Suitable for . . . (*specify*) equipped aircraft only.
UV	Covered by slush to a depth of . . .
UW	Covered by water to a depth of . . .
UX–UZ	Unassigned.

South Norfolk Arpt: Within 5 mi radius. Weekends and evenings. Up to 13,000′.

Suffolk Mun Arpt: Weekends and holidays. Up to 12,000′.

Waynesboro Arpt: Wk ends 1800Z–SS. Up to 10,000′.

West Point Arpt: Weekends and holidays. Up to 12,000′.

WASHINGTON

Enumclaw Arpt: Weekends and holidays. Up to 15,000′.

Issaquah-Sky Ranch Arpt: Wed, Fri and weekends. Up to 7000′.

●**Larson AFB:** ½ mi from end of rnwy 21. Daily. Up to 2500′ AGL.

McChord AFB: 8 mi S of arpt. 1½ mi SE of TCM rbn. Week ends and occasional ngt. Up to 1500′ AGL.

Moses Lake Mun Arpt: 1.5 mi NE. Daily up to 10,000′.

Oak Harbor, Whidbey Island NAS: Weekends. Up to 12,500 MSL.

Puyallup, Thun Fld: Tues, Thurs and weekends. Up to 12,000′.

Richland Arpt: 3 mi W SR to 1 hr after SS. Up to 12,500 AGL.

Snohomish Arpt: Daily. Up to 24,000′ MSL. Occasionally 1 mi SW.

WEST VIRGINIA

Morgantown Arpt: 3 NM SSW. Days.

WISCONSIN

Holstein Arpt (New): Weekends, SR–SS. Sat and Sun Up to 12,500′.

Juneau (Dodge Co Arpt): Weekdays after 1700 Sat and Sun afternoons. Up to 13,500′.

●**Lake Geneva/Natl Sports Parachuting Center:** 0800–1 hr after SS Wed, Thu, Sat, Sun. Up to 15,000′.

Superior Arpt: 5 mi SE weekends SR–SS. Up to 12,500′.

Menomonee Falls, Aero Park Arpt: 2200–SS Mon thru Fri Up to 12,500′ MSL.

Osseo: 3 mi W. Sundays. Up to 10,000′.

PREFERRED ROUTES

A system of preferred routes has been established to guide pilots in ming their route of flight, to minimize route changes during the operaal phase of flight, and to aid in the efficient orderly management of the traffic using federal airways. The preferred routings which follow are gned to serve the needs of airspace users and to provide for a system- flow of air traffic in the major terminal and en route flight environits. Cooperation by all pilots in filing preferred routes will result in er traffic delays and will better provide for efficient departure, en route arrival air traffic control service.

The following list will hereafter appear in EACH issue of the AIRGI.
This list contains preferred routes for the low altitude stratum (below 00 feet MSL).

New Altitude Stratum—A distinctive numbering system (800 Series) has n introduced to indicate some of the preferred routes in this stratum thereby eliminate the present lengthy route descriptions. Many of preferred routes, however, retain the common basic airway numbers e the two systems of numbering in combination. Additional designa of "800 Series Airways" will be made where simplicity and conence to both pilots and controllers dictate such assignments.

Preferred Route Starting and Terminating Fixes—Preferred routes generally commence and terminate at fixes on or near the perimeter of the terminal area.

Depicted on the Area Charts, produced by Coast and Geodetic Survey, are the normal routes between the airport and the preferred route starting/terminating fixes. Whenever a fix is shown in **bold-face** type, pilots should refer to the appropriate Area Chart for the routing he may expect prior to or after that fix as appropriate.

Preferred routes beginning/ending with an airway number indicate that the airway essentially overlies the airport and flights are normally cleared directly on the airway. All preferred routes are listed alphabetically under the name of the departure airport. Major airports in close proximity are listed under the principal airport and categorized as a metropolitan area; e.g., Chicago Metro Area. Official location identifiers are used in the route description for VOR/VORTAC navaids. L/MF navaids are identified by the identifier and type: e.g., MIV/LFR, DOV/Rbn. Intersection names are spelled out. Where two navaids or an intersection and a navaid follow in succession, the route is direct.

(L20, 23)=Enroute chart numbers.

STANDARD INSTRUMENT DEPARTURES (SIDs)

(Explantory information is provided in Section II–6)

CALIFORNIA

Fresno Air Terminal

In narrative form only

PINEDALE ONE DEPARTURE

Via direct Fresno VORTAC, then via (transition) or (assigned route). Castle Transition—Via Fresno 273 and Castle 150 radials to Castle VOR.

BOWLES ONE DEPARTURE

Via direct Fresno radio Beacon: then a 135 magnetic bearing from the Fresno radio beacon to intercept the Los Banos 084 radial at or above 3,000 feet; then via Los Banos 084 radial to the Fresno 141 radial. Pixley Transition—Turn right via Fresno 141 and Bakersfield 322 radials to Bakersfield. Exeter Transition—Continue via Los Banos 084 radial to intercept and proceed via Fresno 123 and Portersville 323 radials to Porterville.

CONNECTICUT

Bradley Field, Windsor Locks

Narrative form only

AVON TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via Poughkeepsie VOR 089 radial to Poughkeepsie VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR 348 radial at or below 6,000 feet. Cross Bridgeport VOR 357 radial at and maintain (as assigned by ATC), then via (assigned route).

STAFFORD THREE DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via direct to V146, thence via V146 to Putnam VORTAC; thence via Putnam VORTAC 100° radial to V16, V16 to Millis Intersection. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Putnam VORTAC at (as assigned by ATC). Thence via (assigned route).

MADISON THREE DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via 360° radial Hartford VOR to Hartford VOR; thence direct Madison VOR; thence V475 to Deer Park VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR at (as assigned by ATC), thence via (assigned route).

HARTFORD THREE DEPARTURES

Via direct Hartford VOR. Hartford VOR 258 radia to Yale Intersection. Cross Madison VOR 360 radial a or below 4,000 feet. Cross Yale Intersection at (as as signed by ATC), then via (assigned route).

Concurrently cancel Avon One. Stafford Two, Madiso Two, Hartford Two Departures.

●FLORIDA

Miami International Airport

Effective April 1, 1965

GAINESVILLE THREE DEPARTURE

Via the Miami Vortac 296 radial and the Lakelan Vortac 174 radial to Lakeland Vortac thence direc Gainesville Vortac.

Concurrently cancel Gainesville Two Departure.

●MASSACHUSETTS

Laurence G. Hanscom Field, Bedford

In Narrative form only

MANCHESTER THREE DEPARTURE

Via 292° magnetic heading to intercept VORTAC 21 Radial; then via Manchester VORTAC 210 Radial t Manchester VORTAC. Cross Gardner VORTAC 0 Radial/Manchester VORTAC 10 mile DME fix at (a assigned by ATC). Then via (transition) or (assigne route). Albany Transition—Via Manchester VORTA 290 Radial and Albany VORTAC 097 Radial to Alba VORTAC. Kennebunk Transition—Via Manchest VORTAC 060 Radial and Kennebunk VOR 242 Radi to Kennebunk VOR.

PUTNAM FIVE DEPARTURE

Via Gardner VORTAC 112 Radial, Putnam VORTA 026 Radial/Gardner VORTAC 17 mile DME fix to Pu nam VORTAC. Intercept Putnam VORTAC 026 Radi at (as assigned by ATC). Cross Gardner VORTAC 14 Radial/Putnam VORTAC 23 mile DME fix at (as as signed by ATC). Then via (transition) or assigne route). Kennedy Transition—Via Putnam VORTAC 21 Radial to intercept J575 thence J575 to Kennedy VOR TAC. Huguenot Transition—Via Putnam VORTAC 27 Radial to intercept J77 thence J77 to Huguenot VOR TAC.

•NEVADA

Reno Municipal Airport Nev

Effective April 29, 1965

CARSON CITY THREE DEPARTURE

Climb within 3 miles of Reno Airport to cross the rport at or above 5400'. Then via Reno ILS localizer uth course to Washoe Intersection. Cross Washoe at above 10,000'. Then via (transition) or (assigned ute). **Wabuska Transition:** Via heading 085 to intercept 05. **Lake Tahoe Transition:** Hold south of Washoe in-section on the Reno 180 radial right turns, until aching (minimum 12,000') then inbound via Lake hoe 060 radial to intercept (V28/V113/V494/V6).

NOTE: This SID requires a ceiling of at least 000' visibility 2 miles, and a minimum climb rate of 280' per mile to 9000'

NEW YORK

Hancock Airport, Syracuse

In narrative form only

KIRKVILLE ONE DEPARTURE

Via front course Syracuse ILS and Georgetown VOR radial to Georgetown VOR; cross Syracuse ILS LOM 2,000 feet; cross Utica VOR 277 radial at 5,000 feet. en via (assigned route). Take-off Runway 14—Turn t after departure direct to Syracuse ILS LOM.

MONROE ONE DEPARTURE

Via front course Syracuse ILS, Georgetown VOR 352 lial to West Monroe Intersection, cross Syracuse ILS M at 2,000 feet. Then via (transition) or (assigned ute). Florence Transition—Via Syracuse VORTAC 050 lial and V145 to Utica VOR. Syracuse Transition—Via racuse VORTAC 050 radial to Syracuse VORTAC. laski Transition—Via Georgetown VOR 352 radial and 9 to Pulaski Intersection. Take-off Runway 14—Turn t after departure direct to Syracuse ILS LOM.

OHIO

Youngstown Mun Arpt.

In narrative form only

SALEM THREE DEPARTURE

Via Youngstown VOR 197 radial to Ellwood City RTAC 302 radial. Cross Akron VORTAC 084 radial 3000 or above. Then via Ellwood City VORTAC 302 lial to the Ellwood City VORTAC. Cross Ellwood y VORTAC (as assigned by ATC), then via assigned ute.

Departing aircraft shall be established on the Youngs-wn VOR 197 radial within 10 miles of the Youngstown R.

RHODE ISLAND

T. F. Green Arpt., Providence

In narrative form only

WARWICK ONE DEPARTURE

Takeoff Rnwy 5L/R-34—turn right to 160 heading as soon as practicable after leaving 500'. Climb on 160 heading to intercept Quonset Pt. VOR 038 radial. Takeoff Rnwy 16—Maintain rnwy heading to intercept Quonset Pt. VOR 038 radial. Takeoff Rnrwy 23L/R—Turn left to 080 heading as soon as practicable after leaving 500'. Climb on 080 heading to intercept Quonset Pt. VOR 038 radial. Radar vector to Providence VOR 132 radial to Quonset Pt. VOR 038 radial to Quonset Pt. VOR thence via Quonset Pt. VOR 218 radial to V-46. Cross Quonset Pt. VOR at 5000' or below. Cross Norwich VORTAC 124 radial at 7000'. Cross Hampton VORTAC 082 radial (as assigned by ATC) then via (assigned route).

STERLING TWO DEPARTURE

Takeoff Runway 34-5L/R—turn left to 250 heading as soon as practicable after leaving 500 feet. Climb on 250 heading to intercept Providence VOR 284 radial. Takeoff Runway 23L/R 16—turn right to 340 heading as soon as practicable after leaving 500 feet. Climb on 340 heading to intercept Providence VOR 284 radial. Radar vector to Providence VOR 284 radial thence via Providence VOR 284 radial to Sterling VHF intersection. Cross Sterling VHF intersection at / as assigned by ATC/then via/transition/or/assigned/route. Riverhead Transition via V16/V879.

UTAH

Salt Lake City Mun No. 1 Arpt

Effective April 1, 1965

Cancel Stansbury Three Departure.

ADDITIONAL SIDs

In addition to the above, the following areas have SID's published separately in graphic form in the C & GS low altitude chart package.

Wyoming

Casper Air Terminal, Casper
Cheyenne Mun. Airport, Cheyenne

SUBSTITUTE ROUTE STRUCTURE
SHUT DOWN OF ENROUTE NAVIGATION AIDS

An extensive Airways Modernization Program is currently being effected, which requires the scheduled temporary shutdown of selected enroute navigation aids. This action will affect associated airways/routes, MEA's, etc., and will obsolete related information shown on the Enroute Low-Altitude, and High-Altitude U.S. charts. These facilities may be shutdown and/or returned to operation during the period between publication dates of the Enroute U.S. Charts. During this shutdown period the following Substitute Route Structure is operational. NOTAMS are published to cover any change in status of these facilities and pilots are advised to check NOTAMS thoroughly prior to each operation. Pilots are further advised to contact FAA Flight Service Stations regarding any doubtful status of enroute navigation aids or airways.

CALIFORNIA

FT JONES "FJS" VOR SHUTDOWN

18. VOR will be shut down until aprxly April 16. For substitute route cture during shutdown use the following:

SECTIONAL CHART BULLETIN

The purpose of this Bulletin is to provide a tabulation of the major changes in aeronautical information that have occurred since the last publication date of each Sectional Aeronautical Chart. The general policy is to include only those changes to controlled airspace and special use airspace that present a hazardous condition or impose a restriction on the pilot; major changes to airports and radio navigational facilities, thereby providing the VFR pilot with the essential data necessary to update and maintain his chart current. When the Sectional Aeronautical Chart is republished, the corrective tabulation will be removed from this Bulletin.

ABERDEEN

39th Edition, March 4, 1965

No hazardous changes.

•ALBANY

54th Edition, February 4, 1965

Delete Brizee-Harmon arpt 43°05'N, 77°20'W. Delete eposit arpt 42°03'N, 75°25'W. Change Utica VOR freq 13.9 to 108.6. Add obstn 1430' MSL 42°23'15"N, 2°24'14"W. Add obstn 1275' MSL 43°39'24"N, 73°10'-2"W. In western border change Buffalo VORTAC freq 16.5 Ch 112 to 116.4 Ch 111. Delete Dolgeville arpt 3'06"N, 74°45'W. Delete Bridgeport arpt 43°10'N, 5'59"W. WEST VIRGINIA

BECKLEY RDO: VOR unusable beyond 20 nmi 3 350° below 5600′ acct crs roughness, excluding 3 rad at Montgomery Int. Voice reception Charles FSS unreliable below 7500′ MSL 40 nmi radius Be ley VOR 030–180°. Reception satisfactory with a over VOR or MEA.

WISCONSIN

LA CROSSE RDO: VOR unusable 100–150° and 2 060° below 3300′ MSL beyond 20 mi.

MILWAUKEE RDO: Timmerman VOR unusable beyo 35 mi 300–310° below 3400′ MSL acct reduced co age. Alarm status MKE VOR indicated by tra mission of unkeyed 1020 cycle ident signifying u bility for nav and indicating imminent equipm transfer shutdown.

WYOMING

BOYSEN-RESERVOIR RDO: VORTAC has memor crs excursions and roughness all radials.

DUNOIR RDO: VOR restricted to awy rad use only.

SHERIDAN RDO: VORTAC unusable below 40 nmi belo 17,000′ MSL 160–175°; below 15,000′ MSL 175–3 and below 16,500′ MSL 300–230° acct reduced cover

VOR RECEIVER CHECK POINTS

The list of VOR airborne check points and ground check points is given on the following pages. Use of these eck Points is explained in Section I–4.

NOTE: The information is provided in the following order: Facility name (plus airport name, if needed); bearing in degrees magnetic from the VOR; location of the check point (distances in nautical miles); and altitude (in feet MSL, if any).

AIRBORNE

lene, Tex. (Municipal): 047°; 10.1 nmi silos in center f Ft. Phantom alternate for lgt acft 080' 9 nmi ctl wr and bcn.

candria, La. England AFB): 329°; over water tank.

candria, La. (Esler): 152°; over hangar 3.6 nmi from OR.

candria, Minn.: 223.5°; over apch end of rnwy 22.

ndale, S.C.: 342°; over N/S rnwy on Barnwell Co. rpt.

iston, Ala.: 082°; in center of segmented circle, distance 9.5 nmi; 2000'.

leton, Ohio: 238°; over ctl twr Columbus, Ohio-Port olumbus Airport; 2500'.

eville, N.C. (Mun): 278°; over ctl twr 13.6 nmi from OR; 3000'.

ens, Ga.: 308°; 3 nmi over center of three rdo twrs.

nta, Ga.: Lctn #1—012°; over end rnwy 09L. Lctn 2—020°; over end rnwy 27R.

usta, Ga. (Bush Field): 141°; directly over No. 17 of nwy #17; 300'.

usta, Me. (State): 257°; over LFR, 1.8 nmi from UG VOR; 1500'.

in, Tex. (Mueller Mun): 178°; Freeway Int aprxly 9 nmi N of Mueller Mun Arpt.

ersfield, Calif. (Meadows Fld): 127°; over apch end nwy 30; 1200'.

gor, Me.: 072°; over FSS Bldg., Old Town Arpt; 1000'.

lesville, Okla. (Phillips): 161°; over Phillips oil tank—hite ½ mi E of arpt trml.

n Rouge, La. (Ryan): 064°; over tank S side of rpt.

rice, Nebr.: 360°; over RR at Princeton, Nebr.; 2500'.

mont, Tex. (Jefferson County): 056°; water twr prxly 0.4 mi NE of NE end of rnwy 2.

ngham, Wash.: 145°; N end of rnwy 16–34; 660'.

Spring, Tex.: 199°; over the rdo bcn; 1000' AGL.

ngs, Mont. (Municipal): 073°; Intersection of rnwys –22 and 9–27; 4600'.

kstone, Va.: 123°; beacon lgt Lawrenceville, Va. Arpt; 500'.

mington, Ill. (Mun): 030°; lctd 11 nmi NE of BMI OR at railroad crossing river; 2000'.

Boise, Idaho (Air Trml): 086°; over dam outlet S end Lucky Peak Reservoir, 8.5 nmi from VOR; 5000'.

Bozeman, Mont.: 145°; over BZN rdo bcn; 5000'.

Brownsville, Tex. (Rio Grande Valley Intl): 244°; water twr in bldg area of arpt.

Brownwood, Tex: 167°; over arpt bcn.

Brunswick, Ga. (McKinnon): 023°; at arpt rotating beacon.

Burlington, Iowa: 296°; over rdo twr 3 nmi NNW Burlington Arpt.

Burlington, Vt. (Municipal): 030°; over arpt control twr 4.4 nmi from VOR; 2000'.

Butler, Mo.: 073°; over FSS bldg.

Butte, Mont.: 094°; intersection of rnwy 29–33; 6500'.

Carleton, Mich. (Detroit-Wayne-Major): 031°; the E/W and NW/SE rnwys SE of new ctl twr; 2200'.

Casper, Wyo. (Air Trml): 201°; over intersection rnwys 21–25–30; 6300'.

Centralia, Ill. (Mun): 027°; at apch end of rnwy 36.

Chadron, Nebr.: 014°; railroad intersection 1.5 nmi N arpt bndry.

Champaign, Ill.: 175°; over grain elevator 8 nmi S at Pesotum, Ill.; 2000'.

Cleveland, Ohio (Cleveland-Hopkins): 079°; over Cleveland Rbn (H) distance 13.5 nmi; 1500'.

Colorado Springs, Colo. (Peterson Fld): 320°; over microwave twr, 6.8 nmi.

Colts Neck, N.J.: 084°; over awy bcn twr at NE corner of Red Bank, N.J. Arpt.

Concord, N.H. (Mun): 132°; over rdo twr (old LFR) 5.0 nmi.

Corpus Christi, Tex. (Intl): 187°; over grain elevator 1 nmi E of arpt.

Cotulla, Tex.: 255°; rotating bcn on the Cotulla Intl Arpt.

Crescent City, Calif. (McNamara Fld): 104°; over Tank-farm E side of town; 1000'.

Crossville, Tenn (Meml Arpt): 333°; 11 nmi over metal hangar.

Cut Bank, Mont.: 312°; over center rnwy 31; 4800'.

Daggett, Calif.: 224°; over center twr LFR; 2500'.

Danville, Ill. (Vermillion Co.): 194°; int of rnwys 21 and 17; 1700'.

Dayton, Ohio (Mun): 131°; over new trml bldg, 10.76 nmi; 2500'.

Daytona Beach, Fla. (Mun) : 157° ; over remote ctld air/gnd facility antenna.

Decatur, Ala. (Pryor) : 092° ; over intersection of rnwy and taxiway 236° from HSV ; 1000′.

Delta, Utah: 346° ; at apch end of rnwy 34 ; 4900′.

Denver, Colo.: 189° ; over EGW rdo bcn ; 5800′.

Des Moines, Iowa: 356° ; center twr of DSM LFR, 4.2 nmi from VOR.

Douglas, Ariz. (Bisbee-Douglas Intl) : 119° ; over intersection rnwy 12–30 and 17R–35L ; 4700′.

Dublin, Ga. (Municipal) : 067° ; over SW end NE/SW rnwy.

Dubois, Idaho (Municipal) : 335° ; FAA Communications Bldg ; 5200′.

Eagle Lake, Tex.: 181° ; over center of football fld 0.5 nmi SW of Eagle Lake Arpt.

El Dorado, Ark. (Goodwin) : 228° ; trml bldg E side of arpt.

Ellensburg, Wash. (Bowers) : 255° ; center, W end of rnwy 7–25 ; 2300′.

Emporia, Kans.: 046° ; over schoolhouse Neosho Rapids, Kans., 8.5 nmi 2500′.

Ephrata, Wash.: 200° ; centerline, SW end of rnwy 2–20 ; 1500′.

Evergreen, Ala.: 100.7° ; arpt bcn lgt twr lctd on Evergreen (Middleton) Arpt., 15.3 nmi from VOR.

Fargo, N.Dak. (Hector) : 360° ; lctd apch end Hector Fld rnwy 35.

Farmington, Mo.: 195° ; over center of Open Air Theater NE of the town of Fredericktown and 7.0 nmi from VOR ; 2300′.

Fayetteville, Ark.: 183° ; VORTAC ; white circle on arpt ; 2500′.

Fayetteville, N.C.: 239° ; over water twr at Parktown, N.C. 8.0 nmi ; 1200′.

Fillmore, Calif.: 210° ; at CAV rdo bcn 1800′.

Findlay, Ohio: 048° ; over the Ohio Oil Company Admin Bldg at 2000′ ; aprxly 5 nmi from FDY VOR.

Flint, Mich. (Bishop) : Pontiac VOR 332° ; over apch end rnwy 9 ; 2200′.

Flying Cloud, Minn.: 349° ; 4.5 nmi over smokestack at Glen Lake Sanatorium ; 2000′.

Fort Leonard Wood, Mo. (Forney AAF) : 351° ; water twr N side E–W hvy dist 4.9 nmi from transmitter.

Fort Smith, Ark.: 232° ; water tank at N edge of arpt ; 1300′.

Fortuna, Calif.: 358° ; over intersection of rnwys Arcata Arpt ; 500′.

Fortuna, Calif. (Rohnerville) : 128° ; over apch end of rnwy 11 ; 1400′.

Fresno, Calif. (Air Trml) : 133° ; over apch end rnwy 11 ; 500′.

Gage, Okla.: 094° ; over LFR ; 3000′.

Galveston, Tex.: 110° ; arpt terminal bldg.

Garden City, Kans.: 100° ; Cimarron, Kans. at RR tracks and Main St.

Gardner, Mass.: 169° ; hangar mrkd "WORCESTER" on roof, Worcester Arpt ; 1000′.

Gila Bend, Ariz.: 193° ; over apch end of rnwy 35 of Gila Bend Aux. Fld ; 1500′.

Goodland, Kans. (Mun) : 083° ; over water twr NE edge o town of Brewster, Kans., 16 nmi ; 4000′.

Gordonsville, Va.: 305° ; over intersection of rnwy an center txwy Charlottesville-Abermarle Arpt., 16 nm from GVE–VOR ; 2000′.

Grand Forks, N. Dak.: 315° ; over Int N/S and E/W rnwys 1900′.

Grand Island, Nebr.: 141° ; over smoke stack 5.5 nmi fro VOR ; 3100′.

Grand Junction, Colo. Walker Fld) : 059° ; int rnwys : and 22 ; 6500′.

Grants, N. Mex.: 295° ; in flt over FSS adj to rnwy ; 700

Great Falls, Mont.: 026° ; center NE end rnwy 3–21 ; 3

Hallsville, Mo.: 225° ; 14 nmi Int of E/W and N/S rnw over Columbia Mun Arpt., Mo. ; 2000′.

Harlingen, Tex.: 149° ; over rot bcn on Mun Arpt.

Harrisburg, Pa. (York State) : 109° ; over triangle form by rnwys : 2000′.

Hattiesburg, Miss. (Mun) : 149° ; over water twr and r tating lgt bcn on arpt 10 nmi, 800′.

Hayes Center, Neb.: 258° ; 28 nmi over center of town Enders, Neb. ; 4500′.

Hibbing, Minn.: 311° ; over FSS Bldg ; 2400′.

Hickory, N.C.: 225° ; over end rnwy 24.

Hill City, Kans.: 057° ; Hill City Arpt bcn lgt 23 nmi fr the VOR.

Hobart, Okla.: 352° ; centerline of N/S rnwy 100′ above t elevation of the rnwy.

Hobbs, N. Mex. (Lea County) : 030° ; over circle on run pad apch end rnwy 3.

Hoquaim, Wash. (Bowerman) : 037° ; W end and cen rnwy 6 ; 500′.

Houghton, Mich. (County Mem'l) : 241° ; WHDF com bd twr 3.5 nmi from VOR ; 2100′.

Houlton, Me.: 042° ; over Admin Bldg on E side of flt a 5.5 nmi from VOR ; 1500′.

Houma, La.: 117° ; over intersection of rnwys 17–35 a 11–29.

Houston, Tex. (Andrau) : 276° ; arpt bcn on arpt ; 50′.

Houston, Tex.: 099° ; over intersection of E/W txwy a parking ramp of Ellington Field.

Huron, S. Dak. ((Howes) : 153° ; lctd over HON/SB 2000′.

Hutchinson, Kans.: 032° ; apch end rnwy 3 Hutchins Mun Arpt.

Imperial, Calif.: 313° ; apch end of rnwy 32 ; 200′.

International Falls, Minn.: 142° ; RR bridge over stream Ericsburg, Minn 5.4 nmi ; 2200′.

Jackson, Miss. (Hawkins) : 189° ; over arpt intersecti of rnwys 11–29 and 34L–16R.

Jackson, Tenn. (McKellar) : 267° ; over bcn twr ab arpt ; 1000′.

●**Janesville, Wis.** (Rock Co. Arpt) : 034° ; over center apch end of rnwy 04 ; 1600′.

Joliet, Ill.: 102° ; over centerline of NW end of NW/S rnwy ; 1500′.

Keeler, Mich.: 266° ; over intersection of N/S and E rnwys at Ross Fld, Benton Harbor, Mich. ; 1600′.

Kennebunk, Me.: 061° ; over Portland Arpt control twr 18 nmi from Kennebunk VOR ; 1500′.

uville, Mo.: 138°; over water twr at La Plata, Mo. (8.2 nmi from VOR).

ome, Ind.: 097°; over int NW/SE and NE/SW rnwys Marion Mun Arpt., Ind., 17.5 nmi from VOR; 1000'.

Worthington, Minn.: 047° ; over grain elev at Brewste Minn. ; 2800′.
Yakima, Wash.: 246° ; intersection N/S and E/W rnwys 1600′.
Yankton, S.D.: 256° ; 7 nmi over twr ; 2500′.
Yuma, Ariz. (MCAS/Yuma Intl) : 166° ; centerline rnw 17–35 ; 400′.

GROUND

Aberdeen, S. Dak. (Saunders) ; 304° ; midway and cente of N/S taxi strip leading from S edge ramp on E sid arpt.

any, Ga.: 149.5°; center of tie down area on N edge r ramp.

xandria, La. (Esler Fld): 151°; 3.5 nmi in front Admin ldg.

e, Tex. (Jim Wells Co. Mun): 270°; on taxi strip N f hangar.

ntown, Pa. (Allentown-Bethlehem-Easton): 178°; on nwy 17 near the intersection of rnwy 24.

arillo, Tex. (AFB/MUN): 207°; lctd 985' SE of centerne on NE end of the NE/SW rnwy.

arillo, Tex. (Tradewind Arpt): 003°; Send on curve of axiway 50' W apch end rnwy 35 centerline.

erson, S.C. (Mun): 038°; on ramp in front of trml dg.

more, Okla. (Mun): 045°; adjt to S end of NS rnwy.

ntic City, N.J. (Pomona) **NAFEC:** Lctn #1—313°; on nup pad at apch end rnwy 13, 250' from centerline nwy 13–31. Lctn #2—230°; on runup pad at apch d rnwy 4, 500' from centerline rnwy 4-22. Lctn 3—208°; on runup pad at apch end rnwy 35, 250' om centerline of rnwy 17-35. Lctn #4—121°; on nup pad at apch end rnwy 31, 250' from centerline rnwy 13–31.

more, Md. (Friendship Int'l): Lctn #1-293°; centerne of rnwy 10–28 on old runup pad. Lctn #2—290°; 0' N of centerline of rnwy 10–28 on runup pad.

esville, Okla. (Phillips): Lctn #1—167°; S end parel taxi strip. Lctn #2—166°; N end parallel taxi rip. Lctn #3—166°; opposite trml parallel taxi rip.

mont, Tex. (Jefferson County): 051°; W edge of N d of parking ramp.

dji, Minn: 130°; SE corner of Trml ramp.

Spring, Tex. (Howard County): 140°; ctr of runup ea to rnwy 16.

hamton, N.Y. (Broome County): 077°; 400' S of etl r on S ramp south.

ark, N. Dak.: 275°; intersection of N/S taxi strip and e apch end of rnwy 13.

e, Calif. (Riverside Co.): 048°; on ramp 500' in ont of FSS Bldg.

, Idaho (Air Trml): 084°; center N/S taxiway beeen rnwys 28L–10R and 28R–10L on fld.

ling Green, Ky. (Bowling Green-Warren County): 21°; taxiway in front of Admin Bldg.

el, Tenn. (Tri-City): 282°; SW end of ramp in front trml bldg.

nsville, Tex. (Rio Grande Valley Intl): 248°; apch d rnwy 13L.

sbad, N. Mex.: 334°; immediately W of FSS and twr dg on ramp.

tanooga, Tenn. (Lovell): 332°; centerline S taxiway point 175' NE of centerline rnwy 32.

enne, Wyo.: 199°; on yellow line on taxi strip imediately SE or apch end rnwy 8.

ago (West Chicago), Ill. (Du Page Co.): 067°; 5.2 ni on SW corner of N parking ramp at int of txwy rnwy 15 and txwy paralleling rnwy 15–33.

dress, Tex.: 353°; intersection of edge of ramp at cenr taxi strip.

Cincinnati, Ohio: (See Covington, Ky.).

College Station, Tex.: 065°; on W edge of parking ramp on Easterwood Arpt.

Columbia, S.C. (Owens Fld): 022°; compass rose on parking ramp.

Columbia, S.C. (Mun): 331°; circle 450' S of etl twr alt 235'.

Columbus, Ga. (Muscogee Co.): 145°; pointed circle W end of main ramp area.

Columbus, Miss. (Lowndes County): 095°; at center taxiway between parking ramp and rnwy.

Covington, Ky. (Greater Cincinnati): 043°; rnwy 27 E of intersection rnwys 27 and 22.

Cross City, Fla. (Site 58, MEM-TPA): 298°; taxiway near wind indicator and rotating bcn lgt.

Dalhart, Tex.: 170°; SE corner of main ramp.

Dallas, Tex. (Addison): 159°; intersection of center and parallel taxiways.

Danville, Va. (Mun): 338°; S of trml bldg center of intersection of txwy to rnwy 6 and txwy to rnwy 2.

Dickinson, N. Dak.: 182°; intersection of E/W txwy and N/S txwy.

Dodge City, Kans.: 150° center of NW end of NW/SE rnwy.

Dothan, Ala. 186°; intersection of ramp and taxi strip NW of trml bldg.

Dubuque, Iowa: 335°; on ramp in front of terminal bldg.

Duluth, Minn.: 012°; center of intersection formed by taxi strips leading to rnwys 31 and 2 just off SE corner of ramp.

Duncan, Okla. (Halliburton Fld): 328°; trml ramp.

Dyersburg, Tenn.: 250°; intersection of ramp and center taxi strip.

East Hartford, Conn. (Rentschler): 347°; lctd at taxi strip near N side of etl twr.

Eau Claire, Wis.: 180°; center of concrete ramp 150' W of Arpt Opern Office.

Elizabeth City, N.C. (CGAS): Lctn #1—028°; lctd on taxiway leading from CG ramp.

Elko, Nev.: 329°; on apron just off NE end of rnwy 5–23.

Salinas, Calif. (Mun): 257°; rgt shoulder rnwy 21, directly in front of trml bldg.

Salisbury, Md. (Salisbury-Wicomico County): 243°; ramp front of ctl twr.

San Angelo, Tex. (Mathis): 236°; E edge of ramp in front of twr.

San Antonio, Tex. (Stinson Mun): Lctn #1: 329R, run up area at apch end rnwy 9. Lctn #2: 335R, on W end ramp opposite hangars 1 and 2.

San Juan, Puerto Rico (Intl): 081°; lctd on taxiway NE trml bldg.

Santa Barbara, Calif.: 198°; gate 2 in front of trml bldg over Figure 2 painted on apron.

Santa Catalina, Calif.: 346°; SW corner apch end rnwy 4 Santa Catalina Arpt.

Santa Fe, N. Mex. (New Municipal): 334°; at junction main intersection txwy and ramp.

Sarasota, Fla. (Bradenton): 172°; on ramp 800' N trml bldg.

Scottsbluff, Nebr. (Mun: 240°; NE edge ramp opposite trml bldg and W of txwy leading to rnwy 30 aprxly 3000' from apch end.

Seattle, Wash. (Seattle-Tacoma Int'l): 028°; 30' near edge of ramp S and W of Admin Bldg.

Sioux City, Iowa: 314°; painted circle directly in front of new twr.

Sioux Falls, S. Dak.: 148°; in line with E edge of txwy W of ctl twr, 75' S from N edge of parking ramp.

● **Sonoma Co. Arpt.**: 083.5°; SW corner of main ramp.

South Bend, Ind. (St. Joseph Co.): 178°; center of western N/S txwy 200' N of N edge of trml ramp.

Spartanburg, S.C. (Municipal): Lctn #1—192°; at compass rose on ramp.

Springfield, Ill. (Capital): 214°; in front of twr at intersection NW/SE and NE/SW taxi strips.

Springfield, Mo.: 191°; at bend in N/S txwy 400' S of N end of taxi strip.

Stinson, Tex. (Mun Arpt): Lctn #1, 329°; runup area at apch end runway 09. Lctn #2, 335°; on W end of ramp opposite hangars 1 and 2.

Thermal, Calif.: 328°; ramp 250' in front of hangar.

Topeka, Kans. (Philip Billard Arpt): 212°; N/S taxiway W of tetrahedron.

Truth or Consequences, N. Mex.: 155°; on SE/NW txwy adj to wind cone.

Tucumcari, N. Mex.: Lctn #1—255°; over square metal plate lctd on hangar ramp paved area. Lctn #2—266°; over painted orange circle, lctd on taxi strip 100′ off end of rnwy 8.

Tulsa, Okla. (Int'l): Lctn #1—260°; W end rnwy 8. Lctn #2—266°; on txwy SW corner AAL ramp. Lctn #3—265°; in runup position for rnwy 17R.

Tuscaloosa, Ala. (Van De Graaff): 241°; point lctd on centerline of txwy midway between ramp and rnwy.

Twin Falls, Idaho (Joslin): 030°; on parking strip apron 300′ SW of Admin Bldg.

Vero Beach, Fla.: 112°; on taxiway adj to wind sock adj to rnwy 11–29.

Vichy, Mo.: 241°; on center line of NE/SW rnwy 125′ from NE end Rolla National Arpt.

Victoria, Tex. (Victoria Co.-Foster): 126°; apch end rnwy 13L.

Waco, Tex., (Muni): 132°; ramp N of terminal.

Walla Walla, Wash. (City-County): 025°; ctr of txwy apch rnwy 20, mrkd.

Walnut Ridge, Ark.: 050°; taxi strip at parking apron adj to tetrahedron.

Watertown, N.Y. (Mun): 048°; ramp in front of Admin. Bldg.

Watertown, S. Dak.: 184°; lctd SE corner of ramp near taxiway leading to rnwy 12–30.

Wausau, Wis. (Alexander): 338°; 100′ N of wind tee. 30′ from S edge of concrete trml ramp where concrete ramp terminates and blacktop ramp begins.

Wenatchee, Wash. (Pangborn Fld): 45°; front of Administration Bldg.

Westfield, Mass.: 304°; from center of compass rose lctd end of rnwy 15.

Wheeling, W. Va. (Wheeling-Ohio County): 219°; txwy on E side of ramp.

Williamsport, Pa., (Williamsport-Lycoming Co.): 237°; Int of txwy to rnwy 9 and center txwy.

Woodring, Okla.: 348°; ramp W of Term. Bldg.

Youngtown, Ohio: 182° compass rose end of rnwy 18.

Zanesville, Ohio: 010°; on arpt 270′ NE of intersection of NE/SW and NW/SE taxistrips on centerline of NE/SW taxistrip.

VFR AIRPORT TRAFFIC PATTERNS

(In accordance with FAR PART 91.89(c)(3))

Airports	*Runways*	*Departure Procedures*	*Traffic Patterns Alts.*
tlanta, Ga.	9R, 9L	No turns until 3 miles, 2500' for *large acft.	
	27R, 27L	No turns until 3 miles, 2500' for *large acft.	
	15	No turns by *large acft. over more populated areas until 3 mi., 2500'.	
	21	Turn south when speed & altitude permit, or as directed by ATC.	
etts AAF, Tobyhanna Supply Depot, Pa.	14	Right hand tfc pattern.	
urlington Mun., Vt.		Single engine.	1140' MSL
		Multi engine.	1340' MSL
aldwell-Wright, Fairfield, N.J.	27	Acft shall not start crosswind leg until well past the school ltd ¼ mi to the right of the extended rnwy centerline and ¼ mi from the arpt.	1000' AGL (all rnwys)
hicago-Midway, Ill.		Turbine powered acft climb as rapidly as possible.	2000' AGL
hicago-OHare I'ntl Arpt., Ill.		Large acft climb as rapidly as possible.	2000' AGL
over ABF, Del.	01	Right hand tfc pattern.	
	31	Right hand tfc pattern.	
resno Air Terminal, Calif.	29R	*Large reciprocating and turboprop aircraft*–climb on rnwy heading to 1000' AGL, before starting left turn prior to leaving or continuing to oper in the left tfc pattern.	Turbojets–2000' AGL Turboprops and large reciprocating engine aircraft–1500' AGL
	25	*Large reciprocating and turboprop aircraft*–climb on rnwy heading to 1000' AGL before starting left turn prior to leaving or continuing to oper in the left tfc pattern.	
	29R	*Turbojets*–climb on rnwy heading until past Fresno State College before making right turn out of tfc or continuing to oper in the right tfc pattern.	
ardner, Kans.	East	Recommend alt not above 400' AGL until cross-wind leg northbound. Exit pattern NW to remain clear of tfc patterns of Olathe NAS, 3.5 mi NE.	
ennings Arpt, La.	13, 17, 22	Right hand tfc pattern.	
ansas City Fairfax Mun., Kans.		Acft under 12,500 lbs.	600' AGL

Large acft—acft weighing over 12,500 lbs maximum certificated take-off weight.

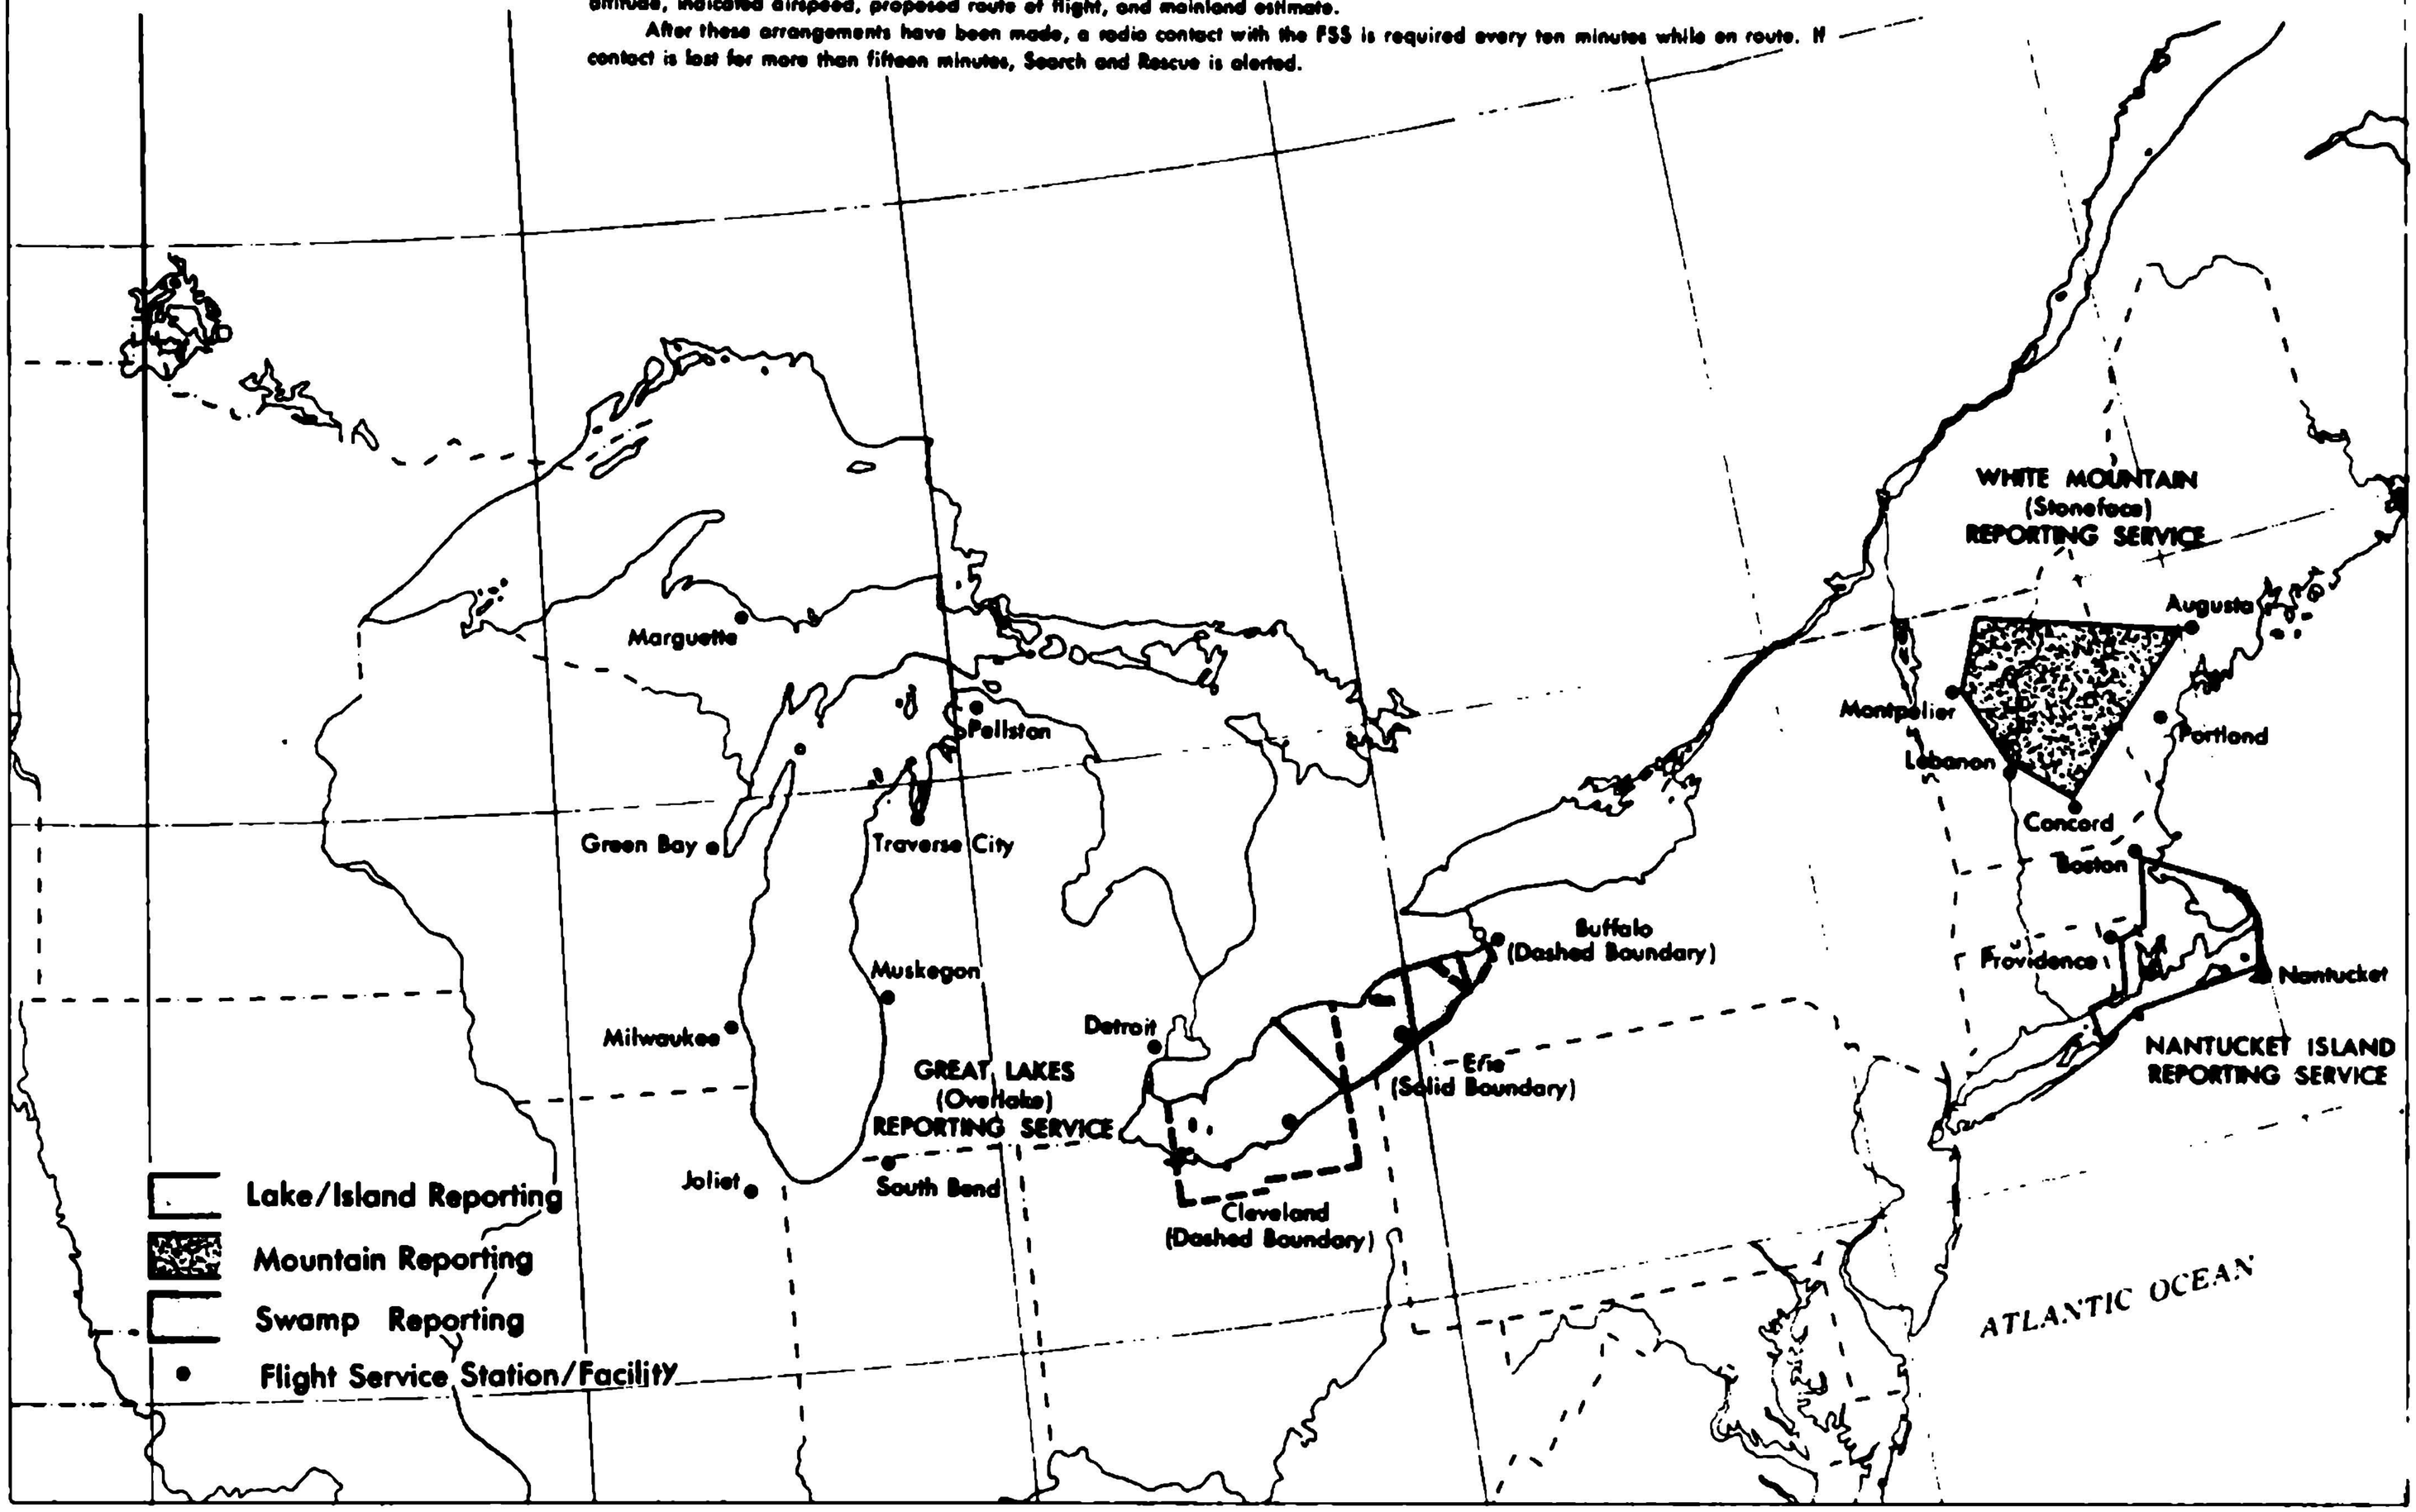
Airports	*Runways*	*Departure Procedures*	*Traffic Pattern Alts.*
Lake Charles, La.	15, 22	Right hand tfc pattern. 1000' slow acft pattern: 1500' turbine powered fixed-wing acft.	
●Midland Airpark, Tex.	25, 29, 34	Right hand tfc pattern.	
New York, LaGuardia	13	Rgt turn and proceed over Flushing Meadow Park before turning on course.	1500'
Oklahoma City, Wiley Post Post Arpt., Okla.	12	Acft shall proceed on rnwy heading until reaching 500' or until passing the arpt bndry before beginning a turn to the right.	lgt acft 800' AGL hvy acft 1200' AGL.
	17	Acft shall proceed on rnwy heading until reaching 500' or until pasing the arpt bndry before beginning a turn to the right.	
	21	Acft shall proceed on rnwy heading until reaching 500' or until passing the arpt bndry before beginning a turn to the right.	
San Antonio, Tex., Stinson Arpt	9, 14, 22	Right hand tfc pattern. 800' AGL light or slow acft. 1500' AGL, heavy or fast acft.	
Sherman Mun., Texas	16	Left turn after takeoff.	800' AGL
	34	Right turn after takeoff.	
Torrance Mun., Calif.	11L	Large aircraft—Upon reaching an altitude of 500 feet MSL but not prior to reaching Crenshaw Boulevard, turn left 45 degrees from the runway departure heading and continue climb.	
	11L	Light aircraft—Upon reaching an altitude of 500 feet MSL but not prior to reaching Crenshaw Boulevard, turn left 90 degrees to the departure runway heading (cross wind leg), thence depart the traffic pattern climbing 45 degrees to the right of the cross wing leg course.	
	11R	All aircraft—Climb on departure rnwy heading to 1500'.	
	29R	Large aircraft—Upon reaching an altitude of 500 feet MSL but not prior to reaching Hawthorne Boulevard, turn right 45 degrees from the runway departure heading and continue climb.	
	29R	Light aircraft—Upon reaching an altitude of 500 feet MSL but not prior to reaching Hawthorne Boulevard, turn right 90 degrees to runway departure heading (cross wind leg), thence depart the traffic pattern climbing 45 degrees to the left of the cross wind leg course.	
	29L	All aircraft—Upon reaching an altitude of of 500 feet MSL, make left turn from the departure runway heading to intercept an area approximately over the Pacific Coast Highway, then proceed in a westerly direction until reaching 1,500 feet MSL or the shoreline.	
Wilkes-Barre Scranton, Avoca, Pa.	16, 22	Right hand tfc pattern.	
Winona, Minn., Max Conrad Fld		Right tfc NW.	

LAKE, ISLAND AND MOUNTAIN REPORTING SERVICE
Flight Service Station (FSS)

This service provides flight monitoring where regularly traveled VFR routes cross large bodies of water, swamps, and mountains, for the purpose of expeditiously alerting Search and Rescue facilities when required.

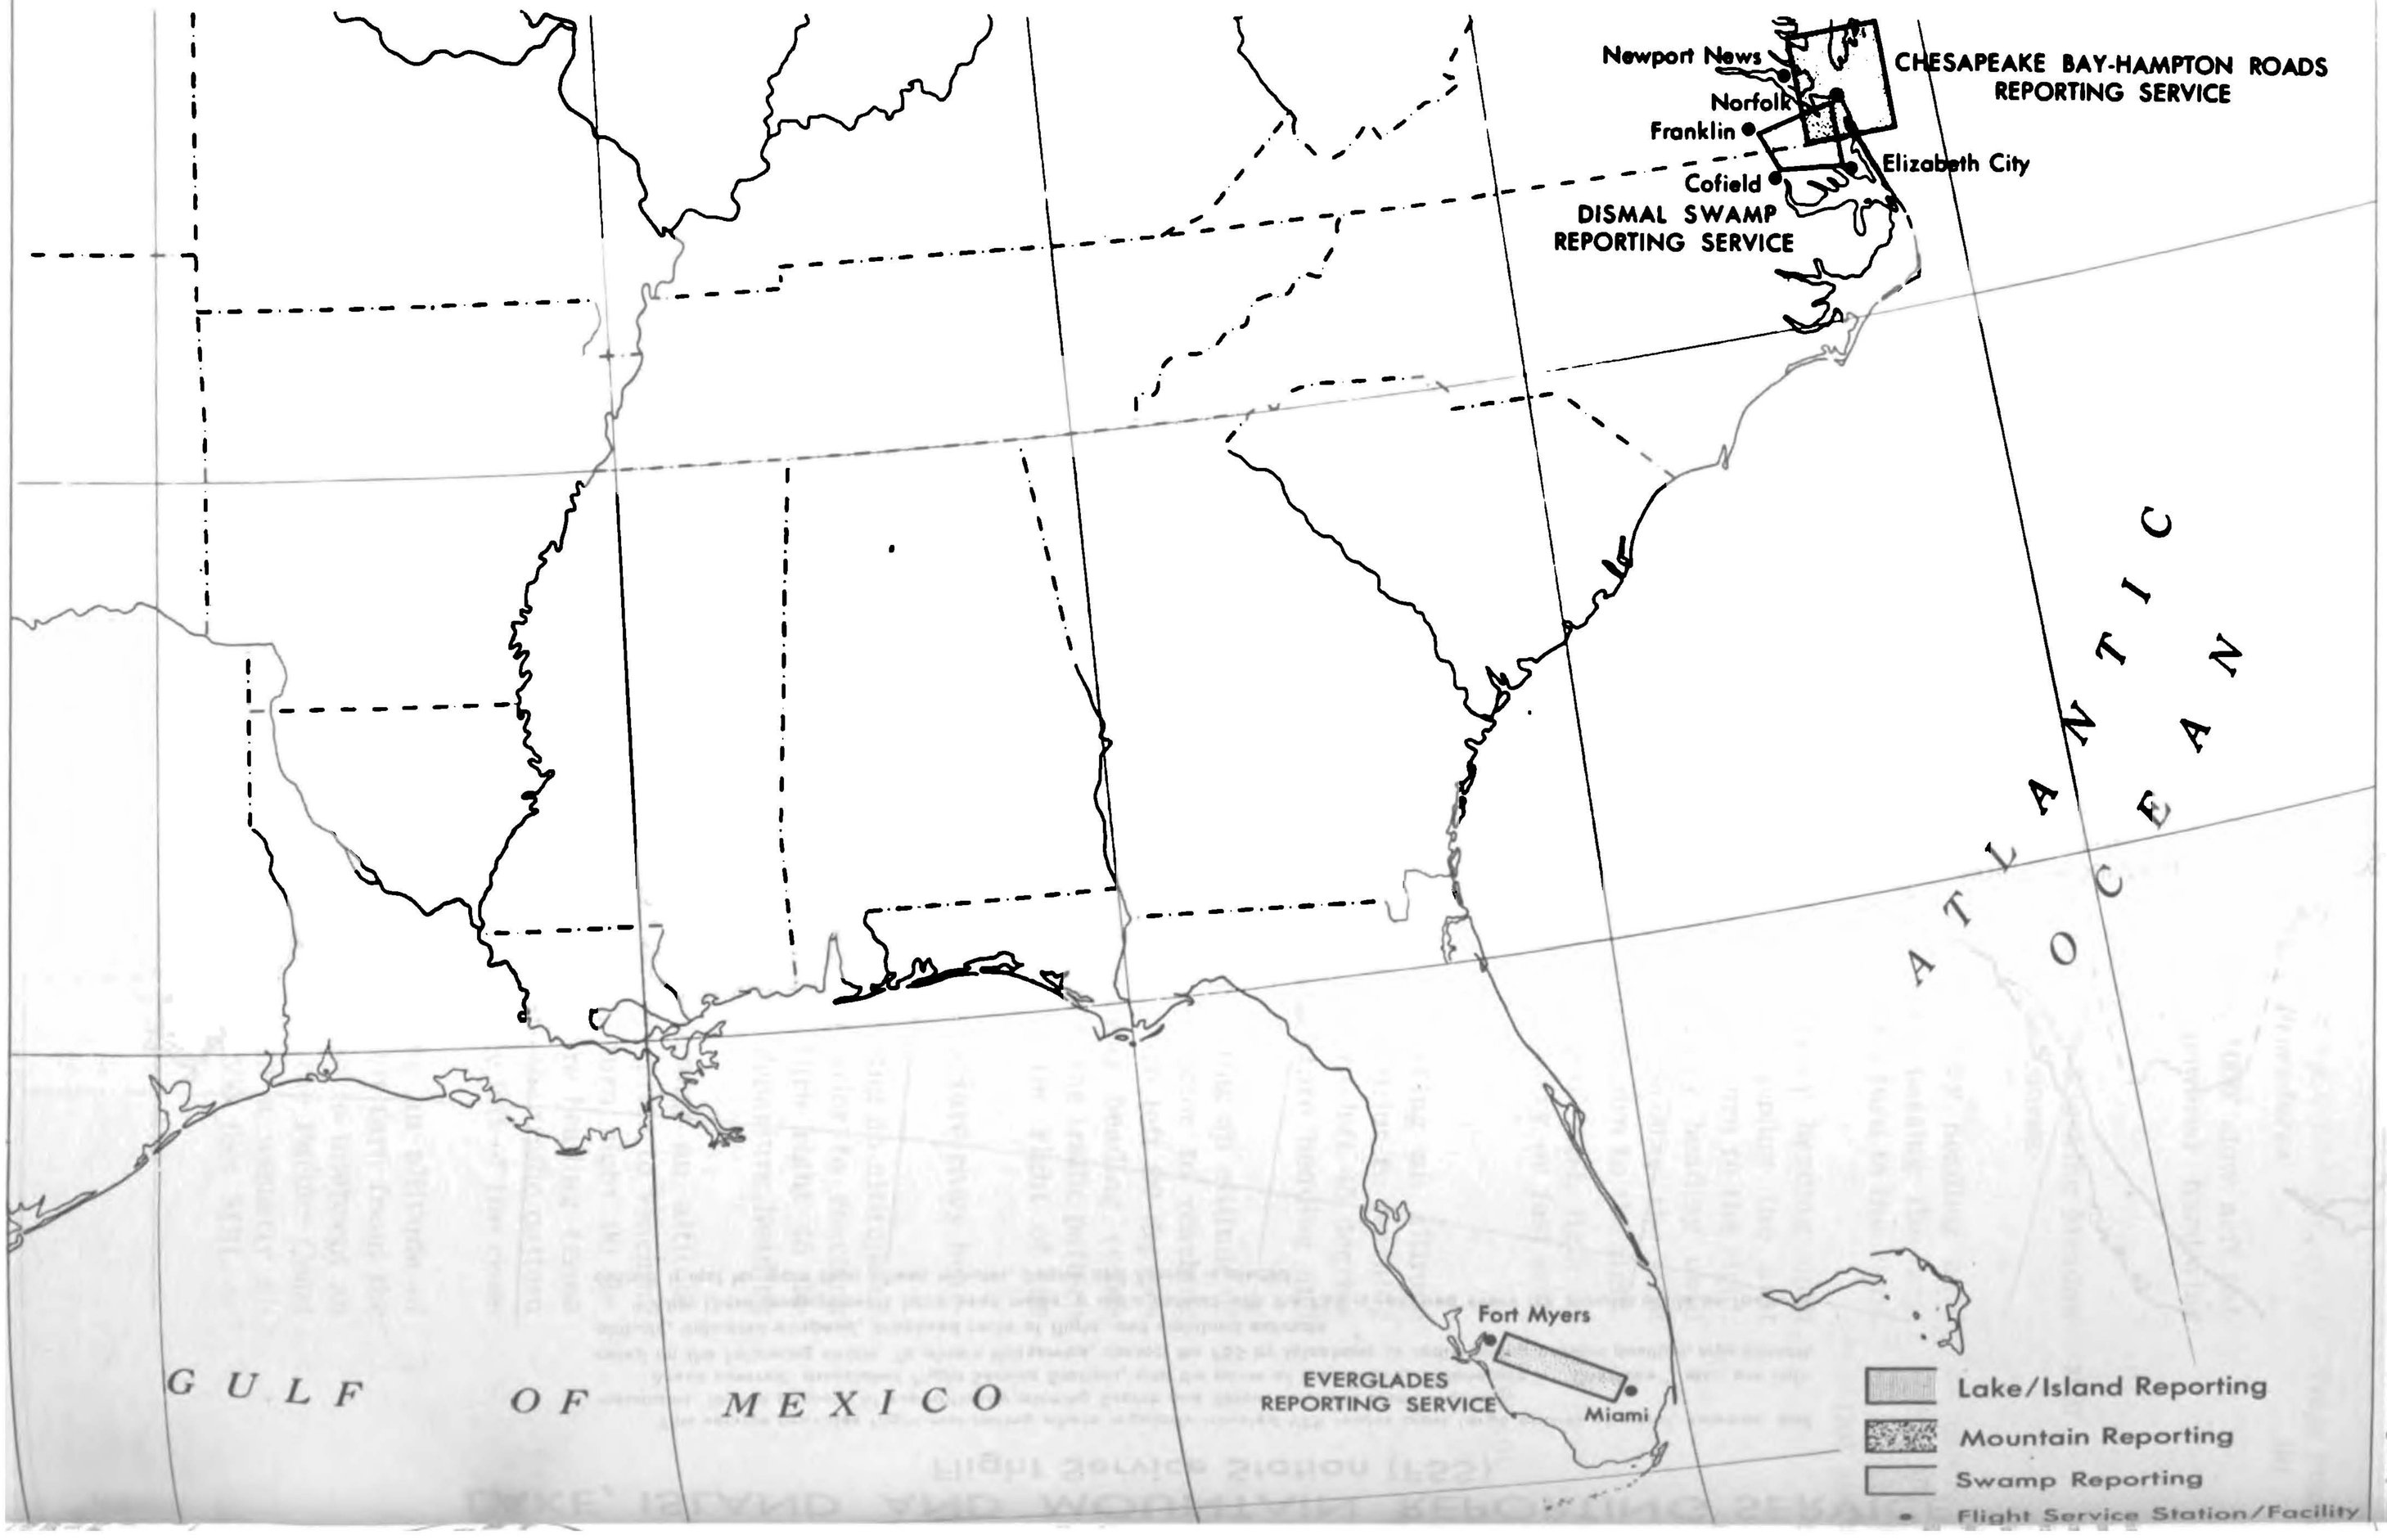
Areas covered, associated Flight Service Stations, and the name of the service, "Stoneface", "Overlake", etc., are indicated on the following charts. To obtain this service, contact the FSS by telephone or radio giving present position, type aircraft, altitude, indicated airspeed, proposed route of flight, and mainland estimate.

After these arrangements have been made, a radio contact with the FSS is required every ten minutes while en route. If contact is lost for more than fifteen minutes, Search and Rescue is alerted.



LAKE, ISLAND AND MOUNTAIN REPORTING SERVICE

Flight Service Station (FSS)



ROCKY MOUNTAIN REPORTING SERVICE

This service is available to aircraft operating VFR (with or without flight plan) between Denver and Grand Junction via Corona Pass or Monarch Pass. This service can not be offered on an area or random route basis due to the unreliability of communications caused by terrain extremes. The routes via Corona Pass and Monarch Pass have been flight checked and communications found reliable at the altitudes published on the chart.

"Rocky Mountain Reporting Service" shall be available to all VFR aircraft upon request, whether or not operating on a regular flight plan.

REQUIREMENTS

1. Aircraft must be equipped with functioning 2-way radio capable of receiving VOR and transmitting 122.1mc.
2. Pilot must fly prescribed route at an altitude no less than established MRA (Minimum Reception Altitude).
3. Pilot must arrange for accurate time of departure to be received by the FAA facility through which the service was requested.
4. Pilot must radio a position report every ten minutes as follows, whether eastbound or westbound:

   CORONA ROUTE

   To Denver Radio while operating between Denver and Corona Pass (vicinity of Moffat Tunnel, west of Tolland, Colorado).

   To Eagle Radio (through Kremmling VOR) between Corona Pass and vicinity of Glenwood Springs.

   To Grand Junction Radio between vicinity of Glenwood Springs and Grand Junction.

   MONARCH ROUTE

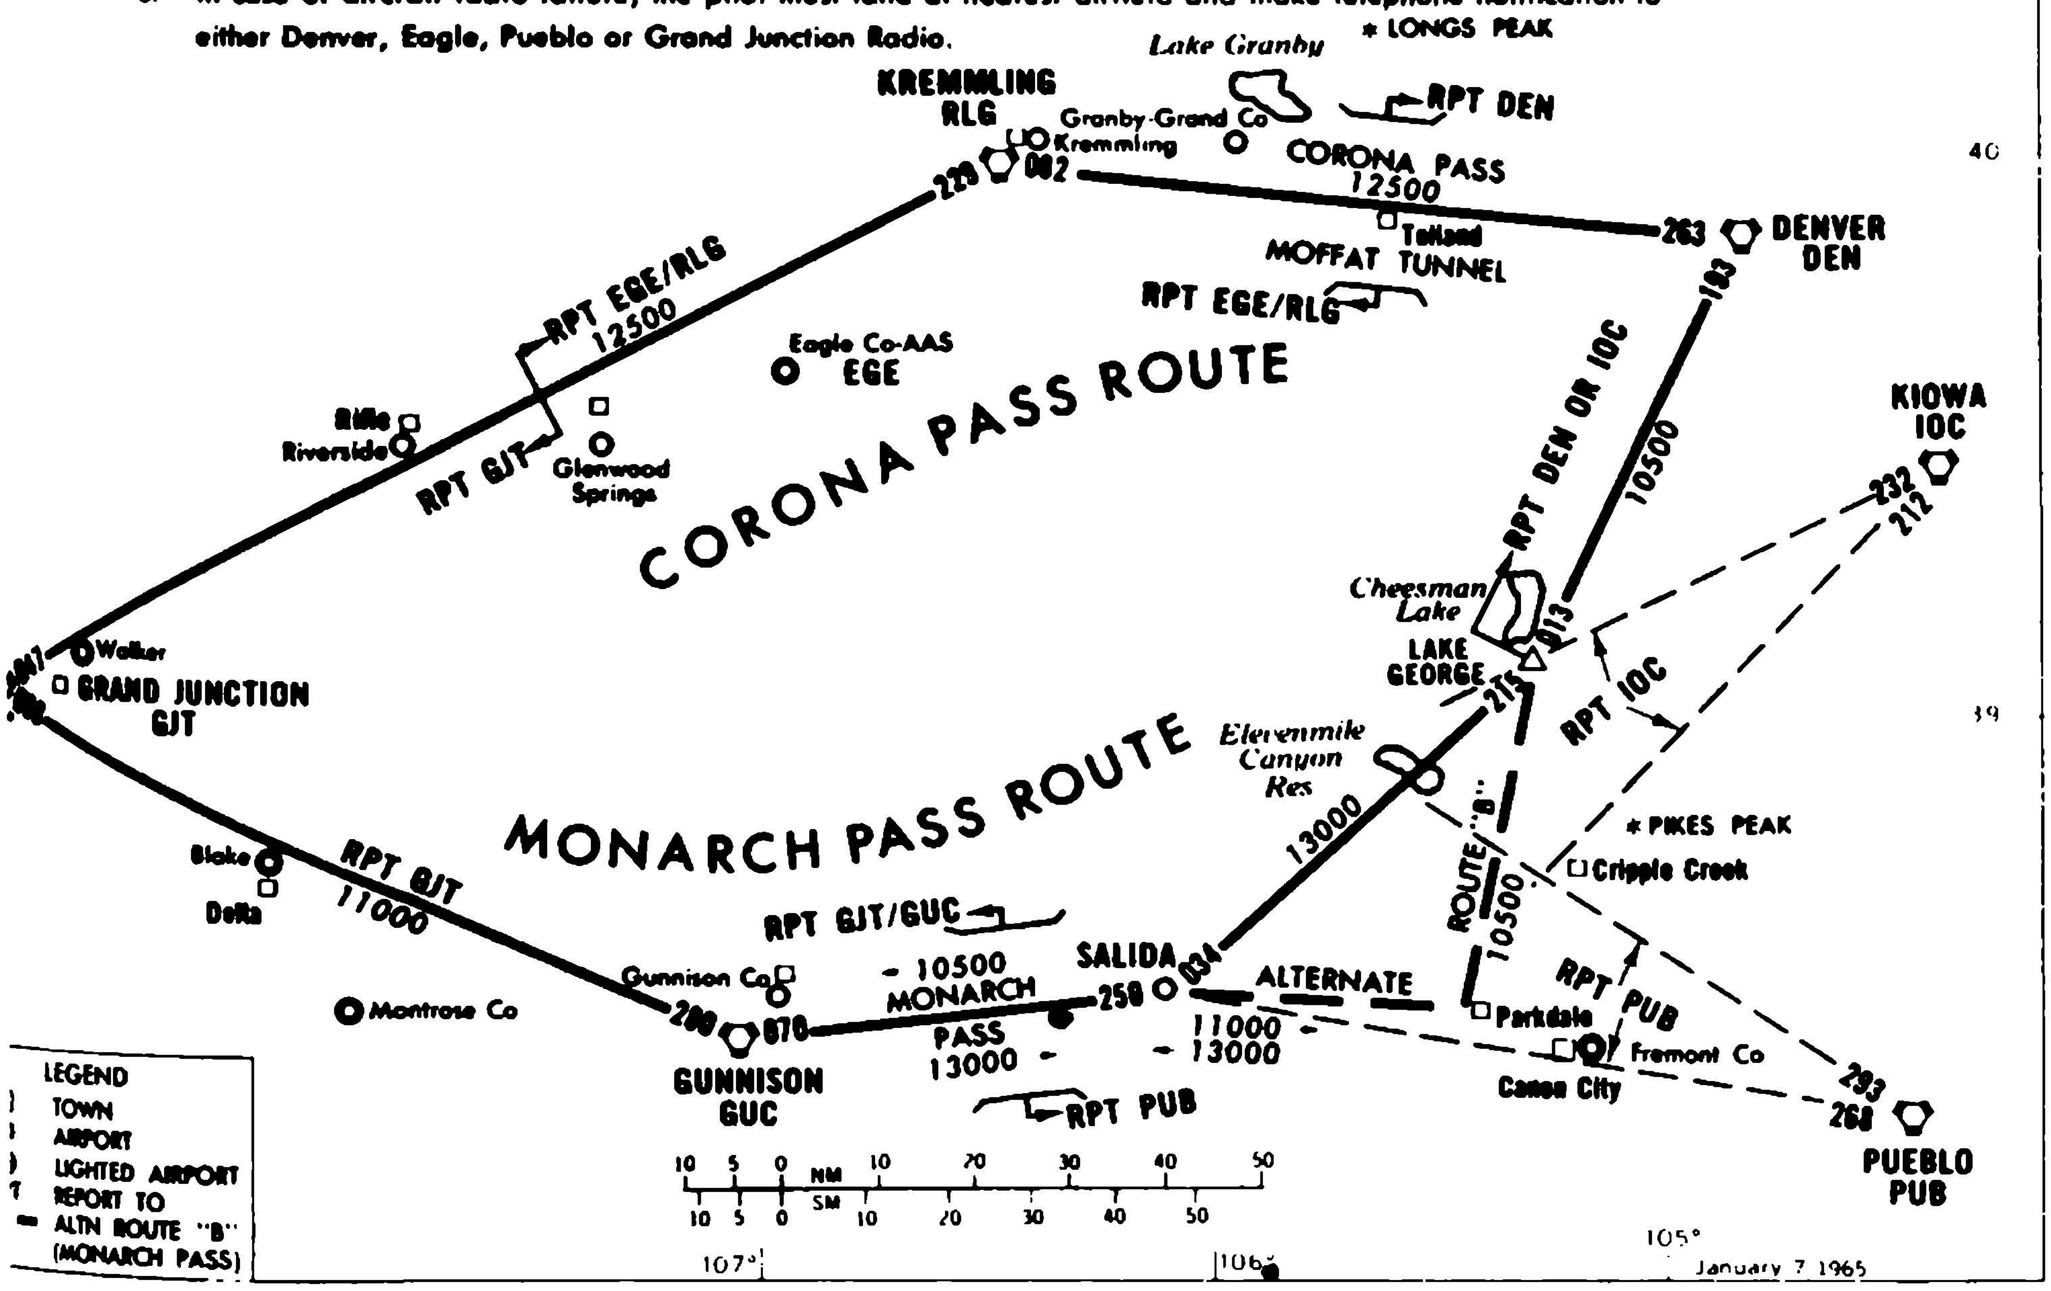
   To Denver Radio (through Denver or Kiowa VOR) between Denver and Lake George Intersection (Cheesman Reservoir). To Denver Radio (through Kiowa VOR only) between the intersection and Elevenmile Reservoir, or west of Cripple Creek, Colorado.

   To Pueblo Radio between Elevenmile Reservoir or west of Cripple Creek and Salida, Colorado.

   To Grand Junction Radio (through Gunnison VOR) between Salida and Grand Junction.

   Pilots may file for all or any portion of either route, i.e. on a flight from Denver to Grand Junction, a pilot may request the service from Denver to Kremmling only.

   (If contact with the aircraft is lost for more than 15 minutes, Search and Rescue will be alerted.)
5. The service may be terminated at any time upon request of the pilot.
6. In case of aircraft radio failure, the pilot must land at nearest airfield and make telephone notification to either Denver, Eagle, Pueblo or Grand Junction Radio.



SPECIAL NOTICES

Special Notices of a general nature or universal application, and other than for a specific geographical location, are grouped together under General Notices. Special Notices pertinent to a specific geographic area are grouped together under Area Notices by state, then city, airport, or location within the state. The month and year the notice is initially inserted into the manual is provided at the conclusion of each Special Notice. A solid dot ● prefixes new or revised Special Notices.

GENERAL NOTICES

MILITARY CLIMB CORRIDORS

ALL FLIGHTS desiring to traverse these areas must obtain prior approval from the Appropriate Authority and maintain continuous listening watch on the appropriate frequency while traversing the corridor. The list of corridor appropriate authority and frequencies follows:

Corridors	Appropriate Authority	Frequencies
Bangor (Dow AFB) Maine	Dow AFB Apch Ctl	126.2; 363.8; 122.5G
Charleston AFB/Mun., S.C.	Charleston Apch Ctl	119.3; 319.8; 122.5G
Columbus (Lockbourne AFB), Ohio	Columbus Apch Ctl	123.7; 122.5G; 360.6
Falmouth (Otis AFB), Mass.	Otis RAPCON	124.7; 118.2; 122.5G
Glasgow (Glasgow AFB), Mont.	Glasgow AFB Apch Ctl	126.2; 236.6; 122.5G; 363.8
Goldsboro (Seymour Johnson AFB), N.C.	Seymour Johnson Apch Ctl	119.7; 122.5G
Grand Forks (Grand Forks AFB), N.D.	Grand Forks AFB Apch Ctl	118.1; 363.8; 122.5G
Grandview (Richards-Gebaur AFB), Mo.	Olathe RAPCON	363.8; 124.7; 122.5G
Hampton Roads (Langley AFB), Va.	Norfolk Apch Ctl	350.3; 125.7; 122.5G
Houston (Ellington AFB), Texas	Houston Apch Ctl	118.1; 284.6; 122.5G
Limestone (Loring AFB), Me.	Loring AFB Apch Ctl	122.5G; 363.8
Madison (Truax Fld), Wisc.	Truax Tower	120.1; 350.3; 122.5G
Marquette Co. (K.I. Sawyer AFB), Mich.	Sawyer Apch Ctl	122.5G; 119.1; 259.3; 363.8
Merced (Castle AFB), Calif.	Castle AFB Apch Ctl	118.9; 122.5G; 379.4
Minot AFB, North Dakota	Minot AFB Apch Ctl	363.8; 118.5; 122.5G
Mt. Clemens (Selfridge AFB), Mich.	Selfridge AFB Apch Ctl	126.2; 363.8; 122.5G
New Orleans (NAS New Orleans), La.	New Orleans Center—5000′ & above, IFR	126.0; 323.2
	New Orleans Apch Ctl—VFR	118.1; 122.7G; 248.7
Oscoda (Wurtsmith AFB), Mich.	Wurtsmith AFB Apch tl	126.2; 122.5G
Oxnard AFB, Calif.	Ventura Apch Ctl	124.7; 319.2; 122.5G
Rome (Griffiss AFB), New York	Griffiss Apch Ctl	118.5; 363.8; 122.5G
San Antonio (Kelly AFB), Tex.	San Antonio Apch Ctl	122.5G; 123.9; 126.5; 134.1; 353.5
San Rafael (Hamilton AFB), Calif.	Hamilton AFB Apch Ctl	122.5G; 126.2
Sault Ste. Marie (Kincheloe AFB), Mich.	Kincheloe Apch Ctl	118.3; 122.5G; 363.8
Victorville (George AFB), Calif.	Edwards Apch Ctl	124.4; 127.1; 137.65; 335.6; 122.5G
Westhampton Beach (Suffolk AFB), N.Y.	Suffolk Apch Ctl	126.2; 122.5G; 236.6
Wrightstown (McGuire AFB), N.J.	McGuire Apch Ctl	122.5G; 110.6T; 134.1; 126.2

●

CIVIL USE OF MILITARY FIELDS:

U.S. Air Force, Navy and Coast Guard Fields are open o civil fliers only in emergency or with prior permission; rmy Air Fields are open to civil aircraft on authorizaion of the Air Field Commander.

For Air Force installations, prior permission should e requested at least 30 days prior to first intended land-g from Headquarters USAF (AFOAPDA) via the Commanding Officer of the field concerned (who has auority to approve landing rights for certain categories f civil aircraft). For use of more than one Air Force stallation, requests should be forwarded direct to Hq SAF (AFOAPDA), Washington, D.C. 20330.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) ia the Commanding Officer of the field concerned (who as the authority to approve landing rights for certain ategories of civil aircraft).

For Coast Guard fields prior permission should be requested from the Commandant, U.S. Coast Guard via the ommanding Officer of the field.

However, with minor exceptions, authority to use Air orce and Navy fields is granted only to aircraft on overnment business, or when no suitable civil airport is ailable in the vicinity. Use of Coast Guard fields is mited to persons on government business only when ere is no suitable civil airport in the vicinity.

When instrument approaches are conducted by civil rcraft at military airports, they shall be conducted in cordance with the procedures and minimums approved the military agency having jurisdiction over the airort.

December 1964

HEAVY TRAFFIC AROUND MILITARY FIELDS

Pilots are advised to exercise vigilance when in close proximity to most military airports. These airfields have an unusually heavy concentration of jet aircraft operating within a 25 nautical mile radius and from the surface to all altitudes. This precautionary note also applies to the larger civil airports. BE ALERT, STAY ALIVE!

December 1964

FLIGHTS ACROSS U.S. BORDERS:

All pilots contemplating flights across U.S. borders should refer to complete regulations in INTERNATIONAL FLIGHT INFORMATION MANUAL, Volume 12, April 1964. Pilots must report for inspection at time of each entry to avoid inconveniences, additional expenses and penalties.

December 1964

HELP PREVENT SMUGGLING BY AIR

All American pilots are asked to help Federal law enforcement agencies in combating the smuggling of illegal aliens and contraband into the U.S. by private aircraft. If you have information of any kind that might relate to smuggling by air, please contact the nearest U.S. Immigration and Naturalization Service or U.S. Bureau of Customs office at once. The local FAA office will pass the information along for you, if you so desire. Awards for original information are paid by Customs under certain circumstances.

December 1964

•AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)

Automatic Terminal Information Service (ATIS) is the continuous broadcast of recorded noncontrol information in selected high activity terminal areas. Its purpose is to improve controller effectiveness and to relieve frequency congestion by automating the repetitive transmission of essential but routine information.

ATIS is now available at high activity terminal airports listed at the end of this Notice. Information such as ceiling, visibility, wind, altimeter, instrument approach, and runways in use is continuously broadcast on the voice feature of a TVOR/VOR/VORTAC located on or near the airport, or on a discrete VHF tower frequency. Pilots of aircraft arriving or departing the terminal area can receive the continuous ATIS broadcasts at times when cockpit duties are least pressing and listen to as many repeats as desired.

Sample Broadcast:

"THIS IS WASHINGTON NATIONAL AIRPORT INFORMATION BRAVO. CEILING MEASURED TWO THOUSAND, OVERCAST, VISIBILITY SIX, SMOKE. WIND ONE SIX ZERO DEGREES AT FIVE. ALTIMETER TWO NINER NINER TWO. VOR RUNWAY ONE FIVE APPROACH IN USE.

LANDING RUNWAY ONE EIGHT. DEPARTURES ON RUNWAY ONE FIVE. NOTAM, GEORGETOWN RADIO BEACON OUT OF SERVICE. INFORM WASHINGTON APPROACH OR GROUND CONTROL ON INITIAL CONTACT THAT YOU HAVE RECEIVED INFORMATION BRAVO."

Pilots hearing the ATIS broadcast should, on initial contact with the tower or approach control, repeat the specific phonetic alphabet code word (Alpha, Bravo, Charlie, etc.) appended to each ATIS message. This will indicate that the pilot has received the latest information and obviate the need for the controller to repeat the information.

Example: ". . . I HAVE RECEIVED INFORMATION BRAVO."

ATIS broadcasts will be updated when there is a significant change in information contained therein. Terminal controllers will issue pertinent information to pilots who do not acknowledge receipt of the ATIS message, or who acknowledge receipt by an alphabet code word which is not current.

Pilots are urged to cooperate in the ATIS program since it relieves frequency congestion on approach control, ground control and local control freqeuncies.

ATIS Locations

Airport Location	*Voice Facility*	*ATIS Frequency*	*Information Broadcast*	*Hours L.S.T.*
Atlanta	REX VOR	111.8 mc	Arrival/ Departure	0800–2000

April 1965

SPECIAL CIVIL AIR REGULATION NO. 456

Effective immediately the provisions applicable under Special Civil Air Regulation No. 456 will apply as follows:

Air traffic clearances to aircraft of Cuban registry not engaged in scheduled International Air Service in U.S. airspace will require that flight be conducted on one of the following routes and a landing be made at Kennedy International Airport. In the event alternates are necessary due to weather, such alternates will be Logan International Airport and Dulles International Airport in that order.

Flights from Montreal to Kennedy below FL 180 will be routed via V–282, V–203, V–91, V–475, DPK. Those at FL 180 and above will be routed via St. Eustache V–91, PLB, J–75, ALB, POU, V–91, V–475, DPK. Flights from Kennedy to Montreal below FL 180 will be routed via Sound Intersection, POU, V–487. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J–75, PLB, V–91, St. Eustache.

Flights from Ottawa to Kennedy below FL 180 will be routed via MSS, V–203, ALB, V–91, V–475, DPK. Those at FL 180 and above will be routed via G–1 Maxville, V–104, MSS, J–37, ALB, POU, V–91, V–475, DPK. Flights from Kennedy to Ottawa below FL 180 will be routed via Sound Intersection, POU, V–91, ALB, V–203, MSS. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J–37, MSS, V–104, Maxville, G–1.

Flights from Toronto to Kennedy below FL 180 will be routed via V–36S, V–252, BGM, V–270, V–34, V–475, DPK. Those at FL 180 and above will be routed via V–36S, BUF, J–95, HUO, CMK, V–34, V–475, DPK. Flights from Kennedy to Toronto below FL 180 will be routed via HUO, V–126, AVP, V–36. Those at FL 180 and above will be routed via Northport Intersection, HUO, J–95, BUF, V–36.

All flights in both directions, between Kennedy and Cuba will be routed via the Tuna Intersection and the overwater Papa Route. These are the only routes which will be authorized. Reroutings which will traverse other U.S. airspace will not be authorized.

The procedures set forth herein will not apply at this time to overflights by aircraft of Cuban registry engaged in scheduled International Air Service. However, if circumstances subsequently warrant, a notam prescribing routes for such aircraft will be issued.

December 1964

Exemption from the provisions of Section 91.109 of Part 91 of the Federal Aviation Regulations

The Department of the Air Force has been issued an exemption from the provisions of Section 91.109 of Part 91 of the Federal Aviation Regulations to conduct certain Radar Bomb Scoring (RBS) training missions at or above Flight Level 300 within 75 nautical miles of the sites listed below. A navigation aid will be listed to define the center of the complex if such an aid is so located. If a NAVAID is not located at the center, the center will be defined by bearing/distance from a High Altitude Navigation Aid.

The NIKE/RBS Complexes used are:

Providence 280°/35NM
Windsor VORTAC
Presque Isle 087°/20NM
Kennedy VORTAC
Boston VORTAC
Rapid City 110°/33NM
Dupree VORTAC 010°/114NM
Syracuse VOR 018°/48NM

PILOT-TO-FORECASTER WEATHER SERVICE

Pilot-to-Forecaster Service (PTFS) in the general area the Washington ARTCC is provided for the purpose the direct pilot/forecaster exchange of meteorological formation when weather conditions are critical, changing pidly or when the direct advice of a professional aviation eteorologist is considered necessary. Routine requests for eather information or pilot reports should be directed the nearest FAA Flight Service Station (FSS).

PTFS is available on the radio frequency of 122.6 egacycles (mc) within communications range of the llowing FAA FSS locations:

Washington, D.C.
Elkins, West Virginia
Richmond, Virginia
Roanoke, Virginia
Front Royal, Virginia
Rocky Mount, North Carolina

Air/ground calls should be made to "Washington Forester" for direct communications with a U.S. Weather ureau Meteorologist who is currently familiar with ather in the area. This service is available from 1200Z 0200Z (7:00 a.m. to 9:00 p.m., EST). Emergency ather service during other periods may be made ailable by contacting the flight service specialist hen VFR) or the Washington ARTCC (when IFR) d requesting that "Washington Forecaster" communite on 122.6 mcs.

December 1964

•MEA, MCA, MOCA, MRA, MAA

Efctv immediately the MOCA for V–205, V–159W, tL to Center Hill Int, Fla. is 1900 ft. vice 1700 ft, and e MOCA for V–152 N, PIE ORL is 1900 ft vice 1700 ft.

March 1965

VFR PRACTICE INSTRUMENT APPROACH PROCEDURES

VFR practice instrument approach procedures at the lowing locations are published for and used by USAF r Training Command pilots:

Cotulla, Tex.	Radio Beacon	JAL–907–ADF
Draughon-Miller Arpt. Temple, Tex	VOR	JAL–809–VOR
Cotulla, Tex.	VOR	JAL–907–VOR
Howard County Arpt. Big Spring, Tex.	VOR	JAL–5019–VOR
Killeen, Tex. Hood AAF	VOR	JAL–5031–VOR
Rock Springs, Tex.	VOR	JAL–111–VOR–3
Sequin AF Aux., Tex.	Beacon	AL–5223–ADF
Vance AFB, Woodring, Okla.	VOR	JAL–135–VOR–3

These approach charts are published by the USAF Aeronautical Chart and Information Center in a loose-leaf format. Civil aviation requests for these charts should be submitted to the Director, Coast and Geodetic Survey, 14th and Constitution Avenue, N.W., Attention: Distribution Division Washington, D.C. 20230.

December 1964

SPECIAL CIVIL AIR REGULATION NO. SR 454A

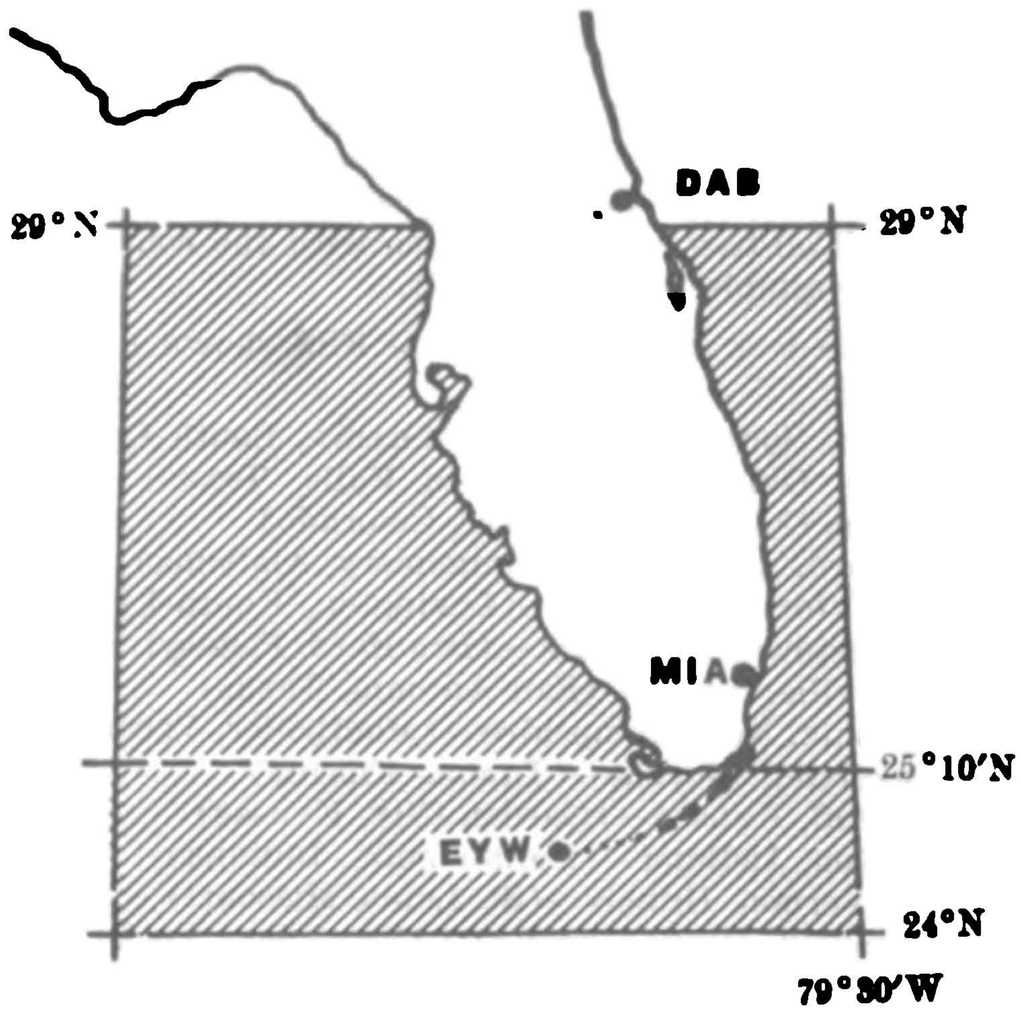
The following special rules of SR 454A are in effect. No person may operate any civil aircraft:

(1) Over water and outside the land mass of the State of Florida beginning at 29°N lat., 85°W long., thence clockwise to 29°N lat., 79°30′W long. to 24°N lat., 79°30′ W long., to 24°N lat., 85°W long., to the point of beginning or over land South of 25°10′N lat., unless:

• (a) It is operated under a flight plan that has been approved by appropriate military authority acting through an FAA air traffic control facility; and

(b) the aircraft possesses functioning navigation and communications equipment necessary to maintain two-way radio contact with air traffic control facilities at all times during the operation, and the pilot in command monitors the radio frequencies specified by air traffic control.

SR 454A is applicable to the land mass between 25°10′N and 29°00′N whenever activated by NOTAM.



•LOCATION IDENTIFIERS

The following changes affect the use of the location identifiers ATP–7350.1 G:

ACY --- Atlantic City, N.J. NAFEC/Atlantic City Airport (Pomona) (correction)

AIY --- Atlantic City, N.J. Municipal Airport (Bader Field) (correction)

April 1965

New Flight Assistance Service Facility Tests

The FAA is testing a modernized FSS configuration by field test of two new types of low cost facilities for flight assistance service at local airports. The tests will extend through June 30, 1965.

Flight Service Facility (FSF): An FSF is operated by FAA flight service specialists during the busy hours of each day. It is equipped with transmit/receive on 121.7 mcs. for airport advisory service and 121.5 mcs. for emergency communications; weather observing instruments; weather teletypewriters; and communications into the ATC system. FSFs provide airport advisory service (on request); aviation weather observations; pilot briefing; and flight plan handling. Toll-free Communications with the control FSS will be available 24-hours daily. During the hours the FSF is operating, pilots landing or departing the FSF airport may contact the FSF for airport advisory service when within 15 nautical miles. Call and listen on 121.7 mcs. Use the name of the FSF airport followed by the word "radio": "Kimble Radio this is N1234V over."

The location of test FSF with control FSS in parenthesis and local hours of FSF operation are:

Delta Municipal Airport, Delta, Utah (Salt Lake City FSS) 0600–1800.
Kimble County Airport, Junction, Texas (San Antonio FSS) 0600–1800.
Manhattan Municipal Airport, Manhattan, Kansas (Salina FSS) 0600–1800.
Crescent Beach Airport, Myrtle Beach, S. C. (Florence FSS) 0600–1800.

Airport Information Desk (AID): An AID is an unmanned facility designed for pilot self-service briefing, flight planning and filing of flight plans. A desk and flight planning material will be available at all AID locations, usually during daylight hours. In addition, some AIDs will have weather instruments and weather teletypewriters. Toll-free communications with the control FSS will be available 24 hours daily.

The AID test sites with control FSS shown in parenthesis are:

Aiken, South Carolina—(Florence, South Carolina)
Altus, Oklahoma—(Wichita Falls, Texas)
Aspen, Colorado—(Denver, Colorado)
Auburn, Alabama—(Montgomery, Alabama)
Frankfort, Kentucky—(Lexington, Kentucky CS/T)
Jamestown, New York—(Bradford, Pennsylvania)
Kerrville, Texas—(San Antonio, Texas)
Laconia, New Hampshire—(Montpelier, Vermont)
Lakeland, Florida—(Tampa, Florida)
Liberal, Kansas—(Garden City, Kansas)
Marion, Indiana—(Indianapolis, Indiana)
Mt. Vernon, Illinois—(St. Louis, Missouri)
Pittsfield, Massachusetts—(Albany,New York)
Ruidoso, New Mexico—(Roswell, New Mexico)
Tacoma Industrial Airport, Washington—(Seattle, Washington)
Twin Falls, Idaho—(Burley, Idaho)

Pilots are invited to use and evaluate these services. Comments and suggestions should be sent to:

Director, Air Traffic Service

April 1965

•FOUR DIGIT BEACON CODE DESIGNATION

Effective April 1, 1965, ATC facilities will use FOUR-GIT beacon code designation in operation and ad-nistrative ATC application; e.g., code 10 becomes 10, code 21 becomes 2100, code 23 becomes 2300, etc. In today's air traffic control, aircraft are equipped with e of two basic types of airborne transponders having ferent select code capability on Mode A 3. One type s a 64 select code capability, using a combination of o digits; the other has a 4096 select code capability, ng a combination of four digits. The operational ference between a 4096 select code transponder and 64 select code transponder is that the 64 select code nsponder transmits only two front digits of the 4096 le scale; e.g., 00 of 0000, 11 of 1100, 21 of 2132, 31 of 30, etc.

To provide a standard means for ATC to utilize one a combination of the 4096 discrete codes, including 64 basic select codes, FOUR DIGIT CODE DESIG-TION will be used, e.g., code 2100 would be expressed TWO ONE ZERO ZERO.

NOTE: Pilots of a 64 select code transponder equipped aircraft should disregard the last two numerals of the numbered code issued by ATC, e.g., if assigned code 2100, set in numerals 21.

Additionally, to facilitate handling of flight data, the er suffix indicating aircraft transponder and/or DME ipment will be associated with the type of aircraft ead of aircraft identification.

t is most important that pilots, when filing a IFR ht plan for flight in an aircraft equipped with a radar con transponder (no code, 64 code, or 4096 code), E equipment, or a combination of both, identify ipment capability by adding a suffix to the AIR-AFT TYPE preceded by a slant, as follows:

/X (Transponder, no code)
/T (Transponder, with 64 code capability)
/U (Transponder, with 4096 code capability)
/D (DME)
/L (DME and transponder, no code)
/B (DME and transponder, with 64 code capability)
/A (DME and transponder, with 4096 code capability)

NOTE: The suffix is not to be added to the aircraft identification or be transmitted by radio as part of the aircraft identification.

March 1965

•CLEAR AIR TURBULENCE (CAT)

Clear air turbulence (CAT) has become a very serious operational factor to flight operations at all levels and especially to jet traffic flying in excess of 18,000 feet. The best available information on this phenomena must come from pilots via the PIREPS procedures. All pilots encountering CAT conditions are urgently requested to report *time*, *location* and *nature* (moderate, severe or extreme) of the element to the FAA facility with whom they are maintaining radio contact. If time and conditions permit, elements should be reported according to the standards for other PIREPS and position reports. For consistent identification of the degree of turbulence, U.S. Standard Turbulence Criteria Table states:

Light—Loose objects in aircraft remain at rest.

Moderate—Seat-belts required. Unsecured objects move about.

Severe—Occupants thrown violently against seat-belts. Momentary loss of aircraft control. Unsecured objects tossed about.

Extreme—Aircraft is violently tossed about, impossible to control. May cause structural damage.

April 1965

Washington DISTRICT OF COLUMBIA

TEST EVALUATION OF VFR ARRIVAL AND DEPARTURE RADAR TRAFFIC INFORMATION SERVICE

VFR Radar Traffic Information Area

GENERAL PROCEDURES: The Washington VFR Radar Traffic Information Area is that airspace which extends upwards to an altitude of four thousand feet, MSL inclusive, and is encompassed by a line connecting the following points: Rockville, Laurel, Shadyside, Hughesvill, Indian Head, Centreville, and Herndon. (See chart on facing page.)

Pilots of aircraft without radio, as well as those unable to contact VFR Arrival or Departure Information Service on assigned frequencies, are urged to conform to routing via designated VFR arrival and departure routes.

Pilots operating VFR flights destined for Washington National Airport should follow the designated arrival and departure routes listed herein in order to maintain a safe, orderly flow of air traffic in the Washington area.

All aircraft arriving or departing Washington National Airport should proceed with caution when in the vicinity of Andrews AFB.

If destination is other than Washington National Airport, so advise.

THE RADAR SERVICE DESCRIBED HEREIN IS NOT INTENDED TO RELIEVE THE PILOT OF HIS RESPONSIBILITY FOR CONTINUAL VIGILANCE TO SEE AND AVOID OTHER AIRCRAFT. IT IS PROVIDED TO AID HIM IN HIS VISUAL SURVEILLANCE BY CALLING TO HIS ATTENTION PERTINENT TRAFFIC. PILOTS ARE REMINDED THAT THE SURVEILLANCE RADAR UTILIZED BY THE CONTROLLER DOES NOT PROVIDE ALTITUDE INFORMATION.

The following procedures should be adhered to by pilots of VFR flights desiring this service and having proper radio equipment when arriving at and departing from Washington National Airport.

ARRIVAL PROCEDURES: Arriving VFR flights desiring traffic information should contact Washington Traffic Information Service on 119.3 mcs/338.2 mcs UHF when approaching from Laurel, Shadyside RBN, and Hughesville; or on 120.1 mcs/306.3 mcs UHF when approaching from Indian Head, Centreville, Herndon, and Rockville. When practicable, pilots should follow the appropriate VFR arrival route as indicated (See Chart) and maintain listening watch on traffic information frequency until further advised. Landing information will be furnished to aircraft destined for Washington, and radar traffic information will be provided until the pilot is advisesd to contact the tower.

DEPARTURE PROCEDURES: VFR flights departing from Washington Airport desiring traffic information should request the service on initial contact to Ground Control. The pilot should also advise his proposed direction of flight; e.g., "VFR Information Service, Laurel." Following take-off, the tower will advise the pilot when to contact Washington Information Service and the frequency to be used. Flights proceeding to Laurel, Shadyside, and Hughesville will use 119.3 mcs/338.2 mcs UHF. Flights proceeding to Indian Head, Centreville, Herndon, and Rockville will use 120.1 mcs/306.3 mcs UHF. Pilots should depart the Washington Terminal area via the designated VFR departure route most nearly aligned with their destination. They should also maintain listening watch on the appropriate information service frequency until cleared to leave the frequency or beyond the perimeter fix.

Washington National Airport

Arrival Routes

Northeast—Report Laurel. Proceed well right of Washington-Baltimore Parkway to Beltsville, then north of Washington to Chain Bridge.

East—Report Shadyside RBN. Proceed via Brandywine to Fort Washington. Caution—Military conventional and jet traffic vicinity of Andrews AFB Control Zone.

Southeast—Report Hughesville. Proceed via Waldor to Fort Washington. Caution—Andrews jet penetration inbound on Andrews VOR 187 degree radial descending to cross Andrews LFR at 1500 feet MSL.

Southwest—Report Indian Head. Proceed on right side of Potomac River until past Mount Vernon.

West—Report Centreville. Proceed well right of U.S. Route 29 highway to Falls Church.

Northwest—Report Herndon. Proceed well right of Potomac River to Falls Church.

North—Report Rockville. Proceed well left of Potomac River to Chain Bridge.

Departure Routes

Northeast—Proceed via west bank of Anacostia River to Riverdale and well right of Washington-Baltimore Parkway until past Beltsville Airport.

East—Proceed via Fort Washington and Brandywine to Shadyside.

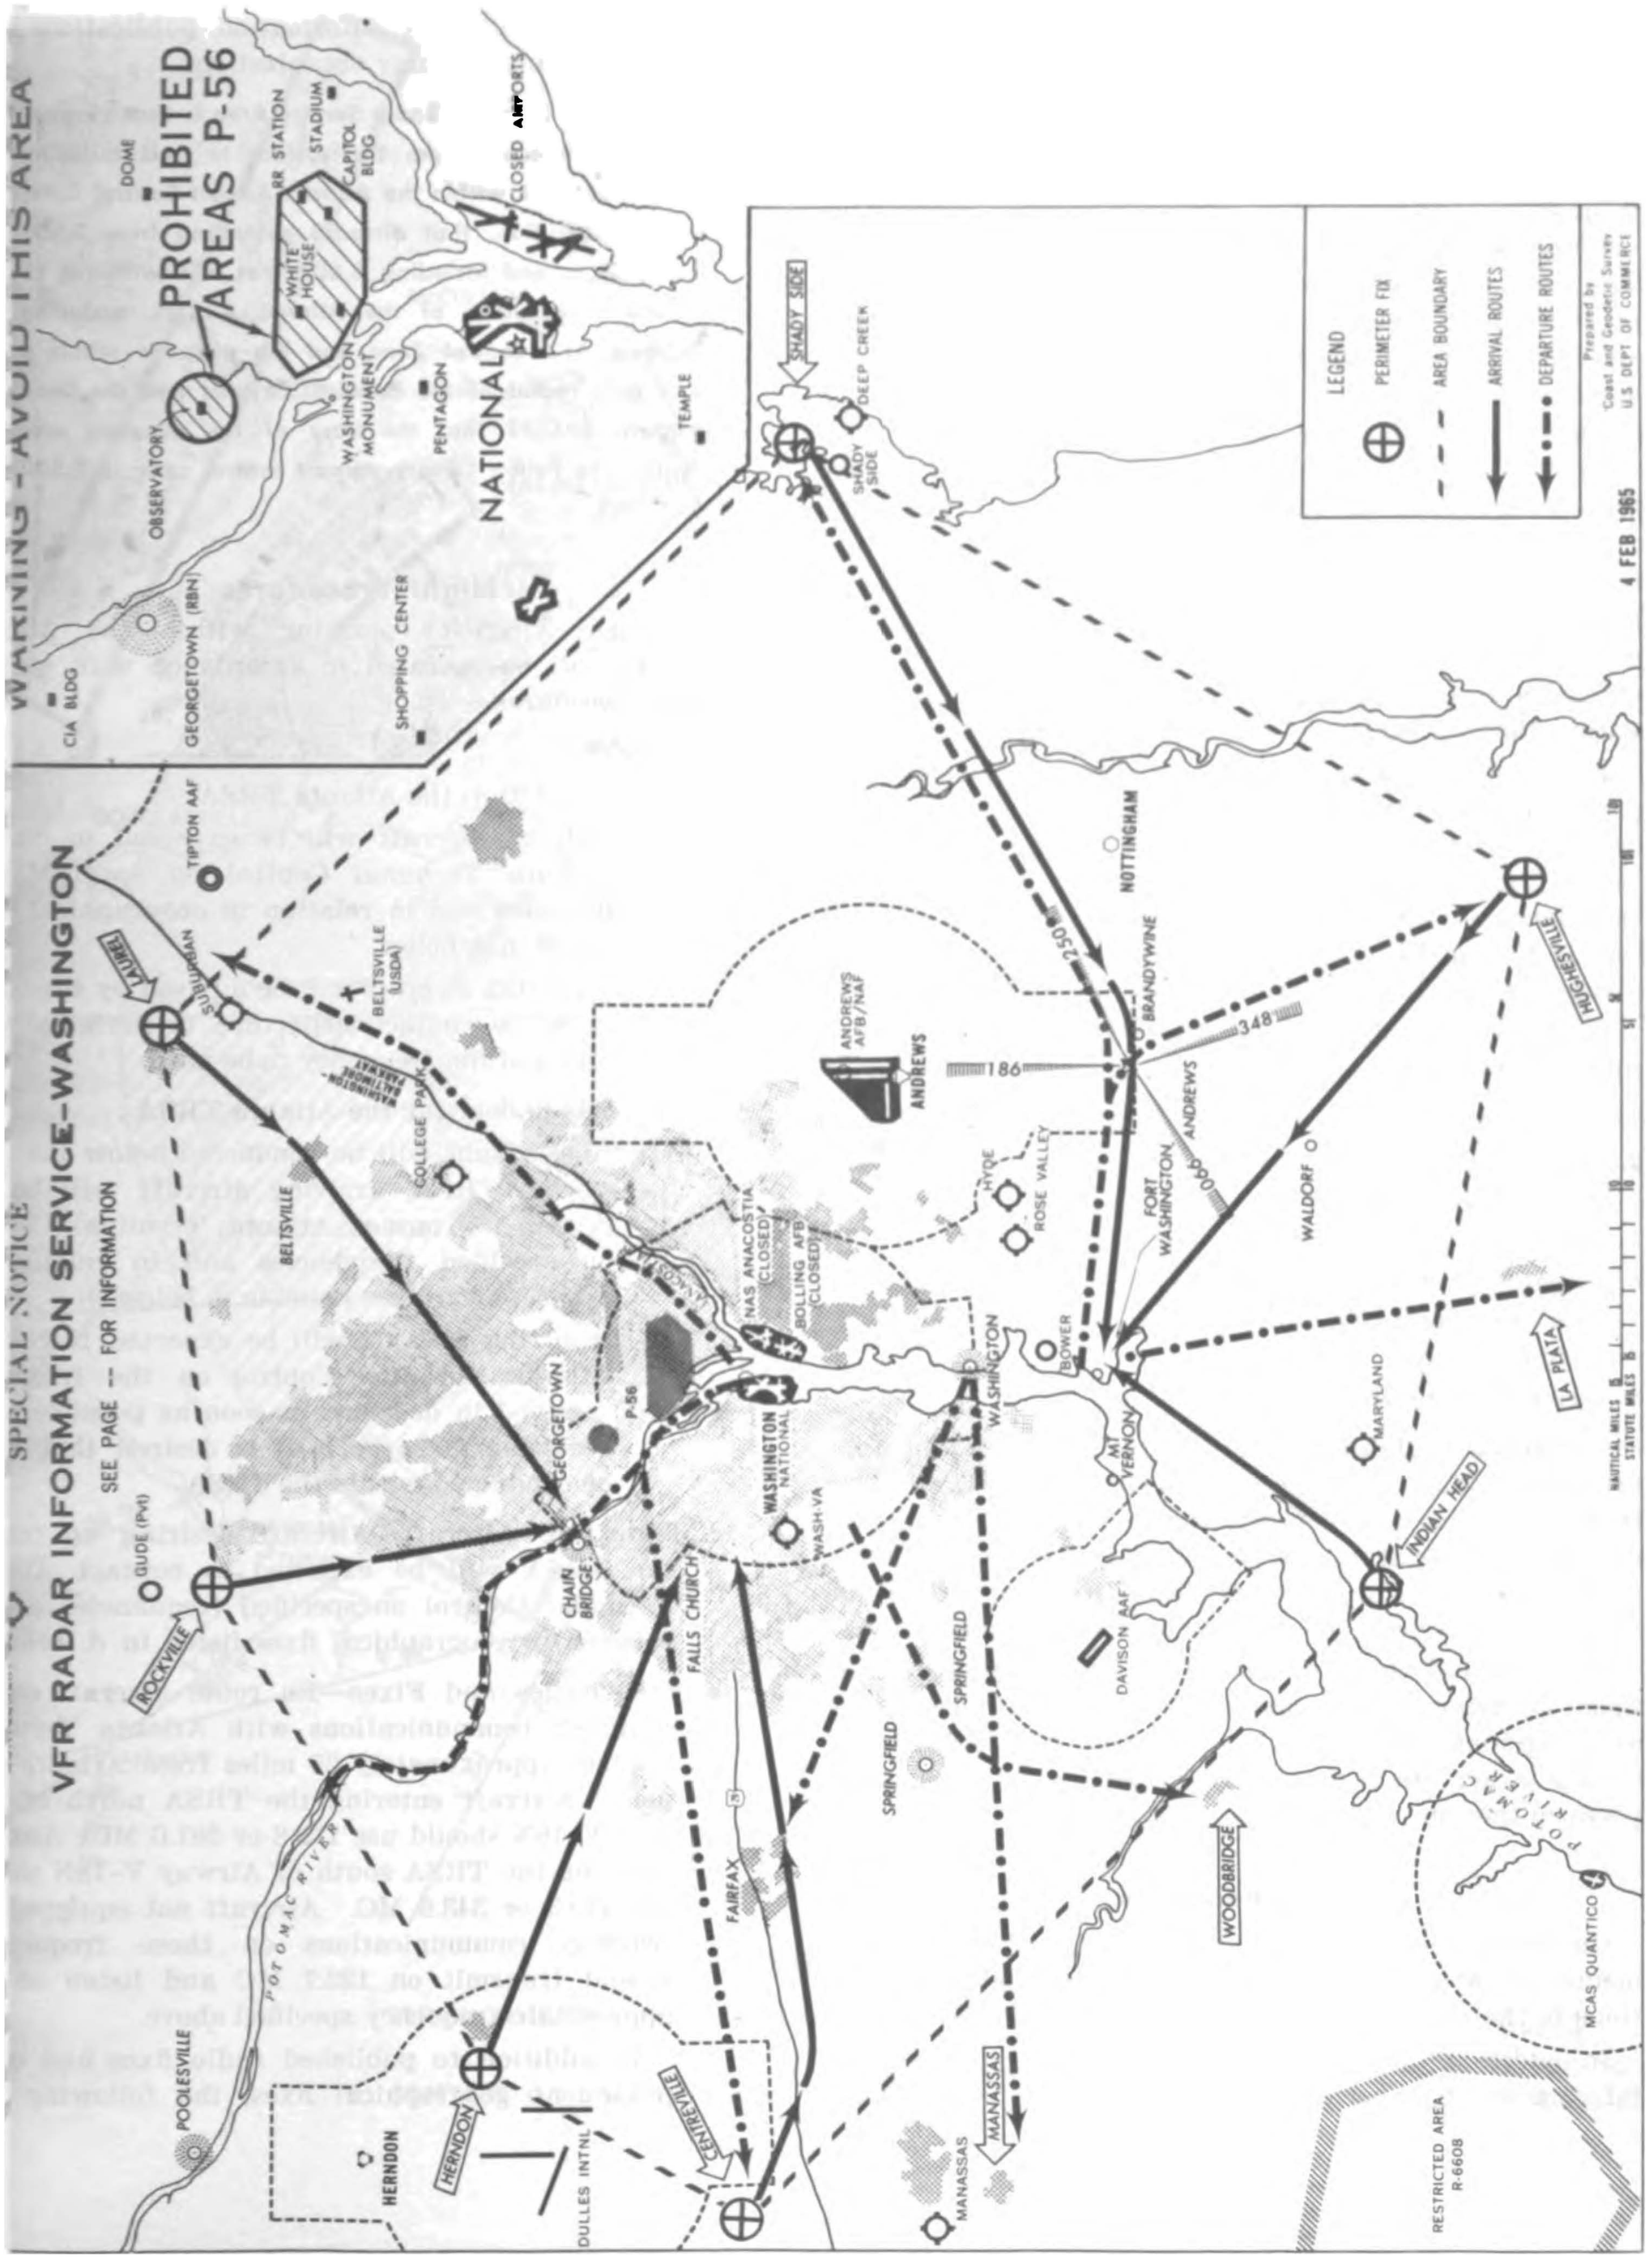
Southeast—Proceed via Fort Washington and LaPlata.

Southwest—Proceed well right of Potomac River until past Woodbridge.

West—North departures proceed well right of U.S. Route 29 highway until past Centreville. South departures proceed via Washington LFR to Manassas.

Northwest—North departures proceed via Potomac River until leaving the area. South departures proceed via Washington LFR to Fairfax.

•DISTRICT OF COLUMBIA



Atlanta GEORGIA

TERMINAL RADAR SERVICE AREA

(An Evaluation of Terminal Area Positive Separation)

The Air Traffic Service, FAA, has developed a program to evaluate a concept of providing a positive separation service to aircraft operating within a terminal area. The airspace area where this evaluation will be conducted will be known as a Terminal Radar Service Area (TRSA). During the evaluation period, a true positive separation environment will not be guaranteed.

This program is in consonance with the report of the Task Force on air traffic control (Project Beacon) and the subsequent Air Traffic Service analysis of the report.

A program for positive separation of aircraft operating in terminal airspace, regardless of weather conditions, must be able to satisfy the many varied requirements of both the VFR and IFR users without imposing excessive restrictions to their operations, yet it must be within the capabilities of the air traffic control system.

In consideration of these two major stipulations, the program will initially be implemented on a voluntary basis, whereby pilot participation will be encouraged rather than required. In this respect, it is obvious that considerable cooperation and effort must be expended jointly by the Federal Aviation Agency (FAA) and the airspace users, if a realistic evaluation is to be made.

Generally, the objective of this evaluation is to determine the following:

1. Airborne equipment and pilotage requirements.
2. Operating personnel, equipment, procedural and airspace requirements.
3. Impact on the over-all terminal operation.
4. Capability of the air traffic control system to provide positive separation to all aircraft operating within a terminal area.
5. Need for regulatory action.

Following a thorough and complete analysis of this evaluation, FAA in cooperation with the users, will determine the necessary requirements for implementation of a positive separation system in high activity terminal areas, wherein all aircraft would be provided separation by the ATC system, irrespective of weather conditions.

The size and shape of the TRSA will vary depending upon operational requirements. This area may be shown as a circular radius or other configuration and should be no larger than absolutely necessary to adequately perform the control functions.

Implementation

On November 15, 1962, a TRSA program was implemented at Atlanta, Georgia, as the first of selected locations to thoroughly evaluate the program.

In addition to the following details and procedures, information has been provided on appropriate charts, other aeronautical flight information publications a through representative user organizations.

The Atlanta Terminal Radar Service Area is that airspace extending upward from the surface to and including 6,000 feet MSL within the Atlanta Airport Control Zone; and, in addition, that airspace extending from 2,000 feet MSL to and including 6,000 feet MSL within a 15 statute mile radius of the Atlanta Airport, excluding Dobbins AFB Control Zone and the airspace within a 1½ mile radius of the Edwards Skyport and the Gunn Airport; EXCEPT that the base of the airspace area within the Fulton County Airport control zone is 2,500 feet MSL.

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Atlan TRSA shall be operated in accordance with curre IFR procedures.
2. **VFR Flights**

   a. Airports within the Atlanta TRSA:

      (1) Arriving aircraft will be expected to cont Atlanta Terminal Control on specified f quencies and in relation to geographical fi listed in d. below.

      (2) Departing aircraft will be advised by the to when to contact departure or terminal c trol and the frequency to be used.

   b. Airports underlying the Atlanta TRSA:

      (1) Unless flight will be conducted below the fl of the TRSA, arriving aircraft will be e pected to contact Atlanta Terminal Cont on specified frequencies and in relation geographical fixes listed in d. below.

      (2) Departing aircraft will be expected to cont Atlanta Terminal Control on the frequen specified in d. below as soon as possible aft becoming airborne if it is desired that flig be conducted within the TRSA.

   c. Transiting Aircraft—Aircraft desiring to tran the TRSA will be expected to contact Atlan Terminal Control on specified frequencies and relation to geographical fixes listed in d. below.

   d. Frequencies and Fixes—En route aircraft shou establish communications with Atlanta Termin Control approximately 25 miles from Atlanta Ai port. Aircraft entering the TRSA north of Ai way V–18N should use 119.8 or 381.6 MC; Aircra entering the TRSA south of Airway V–18N shou use 119.3 or 343.6 MC. Aircraft not equipped fo two-way communications on these frequencie should transmit on 122.7 MC and listen on th appropriate frequency specified above.

      In addition to published radio fixes and oth prominent geographical fixes, the following ar

ATC Procedures

1. The Atlanta TRSA is primarily a radar environment, and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.
2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.
3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

   NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

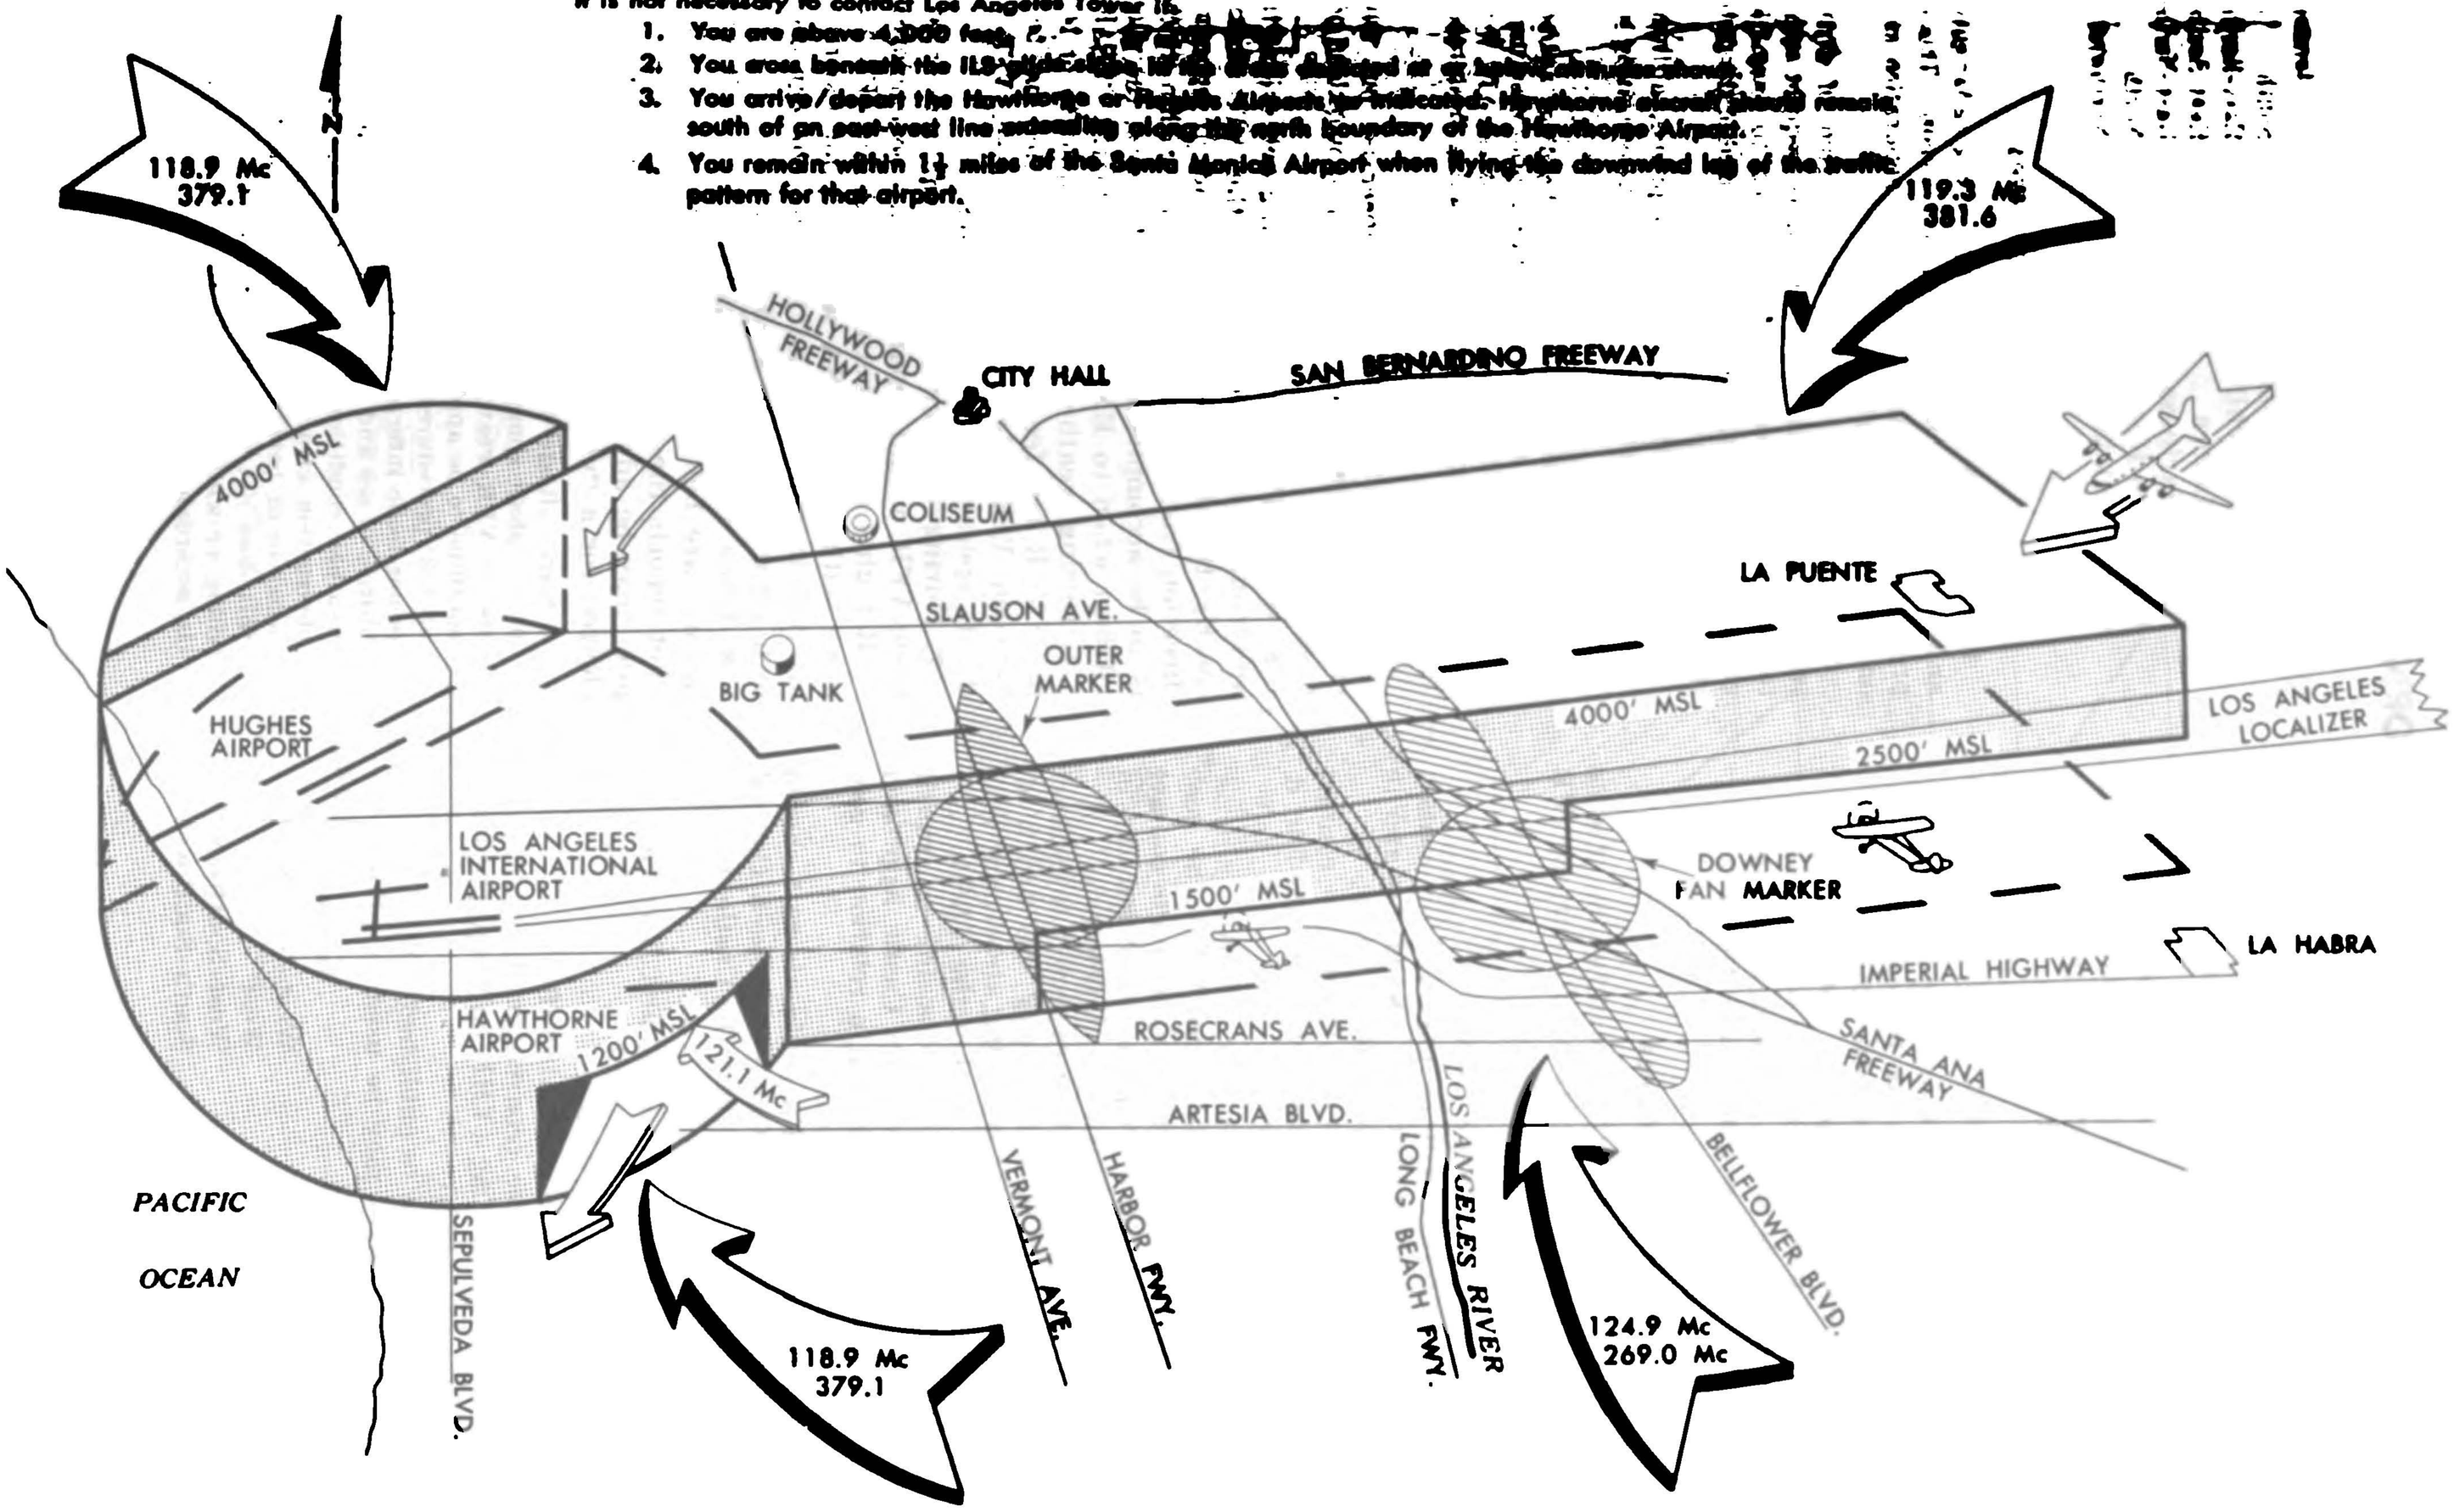
4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.
5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.
6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.
7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.
8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

   NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall apply within the Atlanta TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

Prior to penetrating this area, VFR pilots are encouraged to contact Los Angeles Tower for traffic advisory service on the frequencies indicated for the direction of flight.

It is not necessary to contact Los Angeles Tower if:

1. You are above 4,000 feet.
2. You are beneath the ILS glide path of the [illegible] at an altitude [illegible].
3. You arrive/depart the Hawthorne or Hughes Airports as indicated. Hawthorne aircraft should remain south of an east-west line extending along the north boundary of the Hawthorne Airport.
4. You remain within 1½ miles of the Santa Monica Airport when flying the downwind leg of the traffic pattern for that airport.



*THIS DOES NOT CONSTITUTE AUTHORITY FOR A PILOT TO DEVIATE FROM FAR 91.79 OR OTHER APPLICABLE PROVISIONS OF THE FEDERAL AVIATION REGULATIONS.

Merced CALIFORNIA

CASTLE TERMINAL RADAR SERVICE AREA

Implementation

On March 1, 1965, a TRSA program was implemented at Merced, California, in the Castle AFB terminal area. The service is designed using the concepts developed by the Federal Aviation Agency for the Atlanta, Georgia, area and, in addition, includes procedures peculiar to the operation of military aircraft. The service is mandatory for use by the USAF pilot. All civil and other military pilots are encouraged to participate on a voluntary basis.

The Castle Terminal Radar Service Area is that airspace extending upward from the surface to and including 7,000 feet MSL within the Merced Control Zone; and, in addition, that airspace extending from 1,500 feet MSL to and including 7,000 feet MSL within a 15 nautical mile radius of the Castle Airport, excluding the airspace 3,000 feet MSL and above within Victor Airway 23.

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Castle TRSA shall be operated in accordance with current IFR procedures.

2. **VFR Flights:**

a. Airports within the Castle TRSA:

(1) Arriving aircraft will be expected to contact Castle Approach Control on specified frequencies and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below.

b. Airports underlying the Castle TRSA:

(1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.

c. Transiting Aircraft: Aircraft desiring to transit the TRSA will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

d. Frequencies and Fixes: En route aircraft should establish communications with Castle Approach Control approximately 25 nautical miles from the Castle Airport.

(1) Frequencies:

(a) Civil: 118.9 mc Transmit and Receive
122.5 mc Transmit
114.2 mc Receive

(b) Military: 294.5 mc (jet aircraft)
301.5 mc (conventional aircraft)
137.65 mc (VHF only equipped aircraft)

(2) Fixes: In addition to published radio fixes, the following geographical fixes may be used by pilots:

Fix	Location
City of Modesto	West–Northwest
Crows Landing (NAS)	West
City of Gustine	West–Southwest
City of Los Banos	South–Southwest
City of Dos Palos	South
City of Chowchilla	East–Southeast
City of Madera	East–Southeast
City of Mariposa	East–Northeast
Don Pedro Reservoir	North
City of Oakdale	Northwest

ATC Procedures

1. The Castle TRSA is primarily a radar environment and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.

2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.

3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

NOTE.—**Assignment of radar headings and/or altitude are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.**

4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.

6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.

7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.

8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—**Basic VFR weather minima as set forth in FAR 91.105 shall comply within the Castle TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.**

Chicago ILLINOIS

PARALLEL ILS APPROACHES—CHICAGO O'HARE INTERNATIONAL AIRPORT

Effective April 11, 1964 a revised Parallel ILS 14R&L approach procedure Amendment 1 was effective for Chicago O'Hare International Airport. ILS, radar, communications, ATC procedures and flight procedures are employed as integral parts of a total system. Under the system, Chicago Approach Control may clear aircraft to conduct Parallel ILS Approaches to Runways 14L and 14R when wind conditions permit straight-in landings and when all components of the system—except airborne or ground glide slope equipment—are operating normally. Aircraft are radar vectored to the final approach course (localizer) of either runway and the pilot executes an ILS approach. The separation between localizer courses (6,510 feet) imposes certain requirements and techniques peculiar to parallel approaches.

Requirements: To conduct a Parallel ILS Approach, aircraft must be equipped with a functioning 75 mc marker (or ADF) and localizer receivers, and have the capability to simultaneously monitor both the assigned control frequency and the appropriate localizer voice frequency when advised by ATC.

ATC Concept and Procedures: Arriving IFR aircraft en route to O'Hare Airport will be cleared by Chicago Center to one of four outer fixes (Northbrook, Niles, Lakewood, or Warren) established in the O'Hare Terminal Area and changed over to Chicago Approach Control for further clearance. On initial contact, Chicago Approach Control will advise the pilot that PARALLEL ILS APPROACHES ARE IN PROGRESS. Upon receipt of this information, **pilots who do not have required equipment** or do not wish to conduct a Parallel ILS approach, or require a specific runway, or require a radar fix in lieu of Meadow Intersection for 14L, must advise Chicago Approach Control prior to departing the outer fix. This will enable the controller to plan and provide for individual handling.

Chicago Approach Control will clear aircraft to depart the outer fix on a specified heading and at a specified altitude FOR RADAR VECTOR TO RUNWAY 14 (RIGHT/LEFT) ILS FINAL APPROACH COURSE and will specify the appropriate localizer frequency (109.7 or 110.1). After departing the outer fix, aircraft will be descended to the appropriate ILS Intercept Altitude (2,200 or 3,200 feet m.s.l.) and provided a period of level flight prior to the ILS intercept in which the pilot may dissipate any excess speed accumulated during the descent.

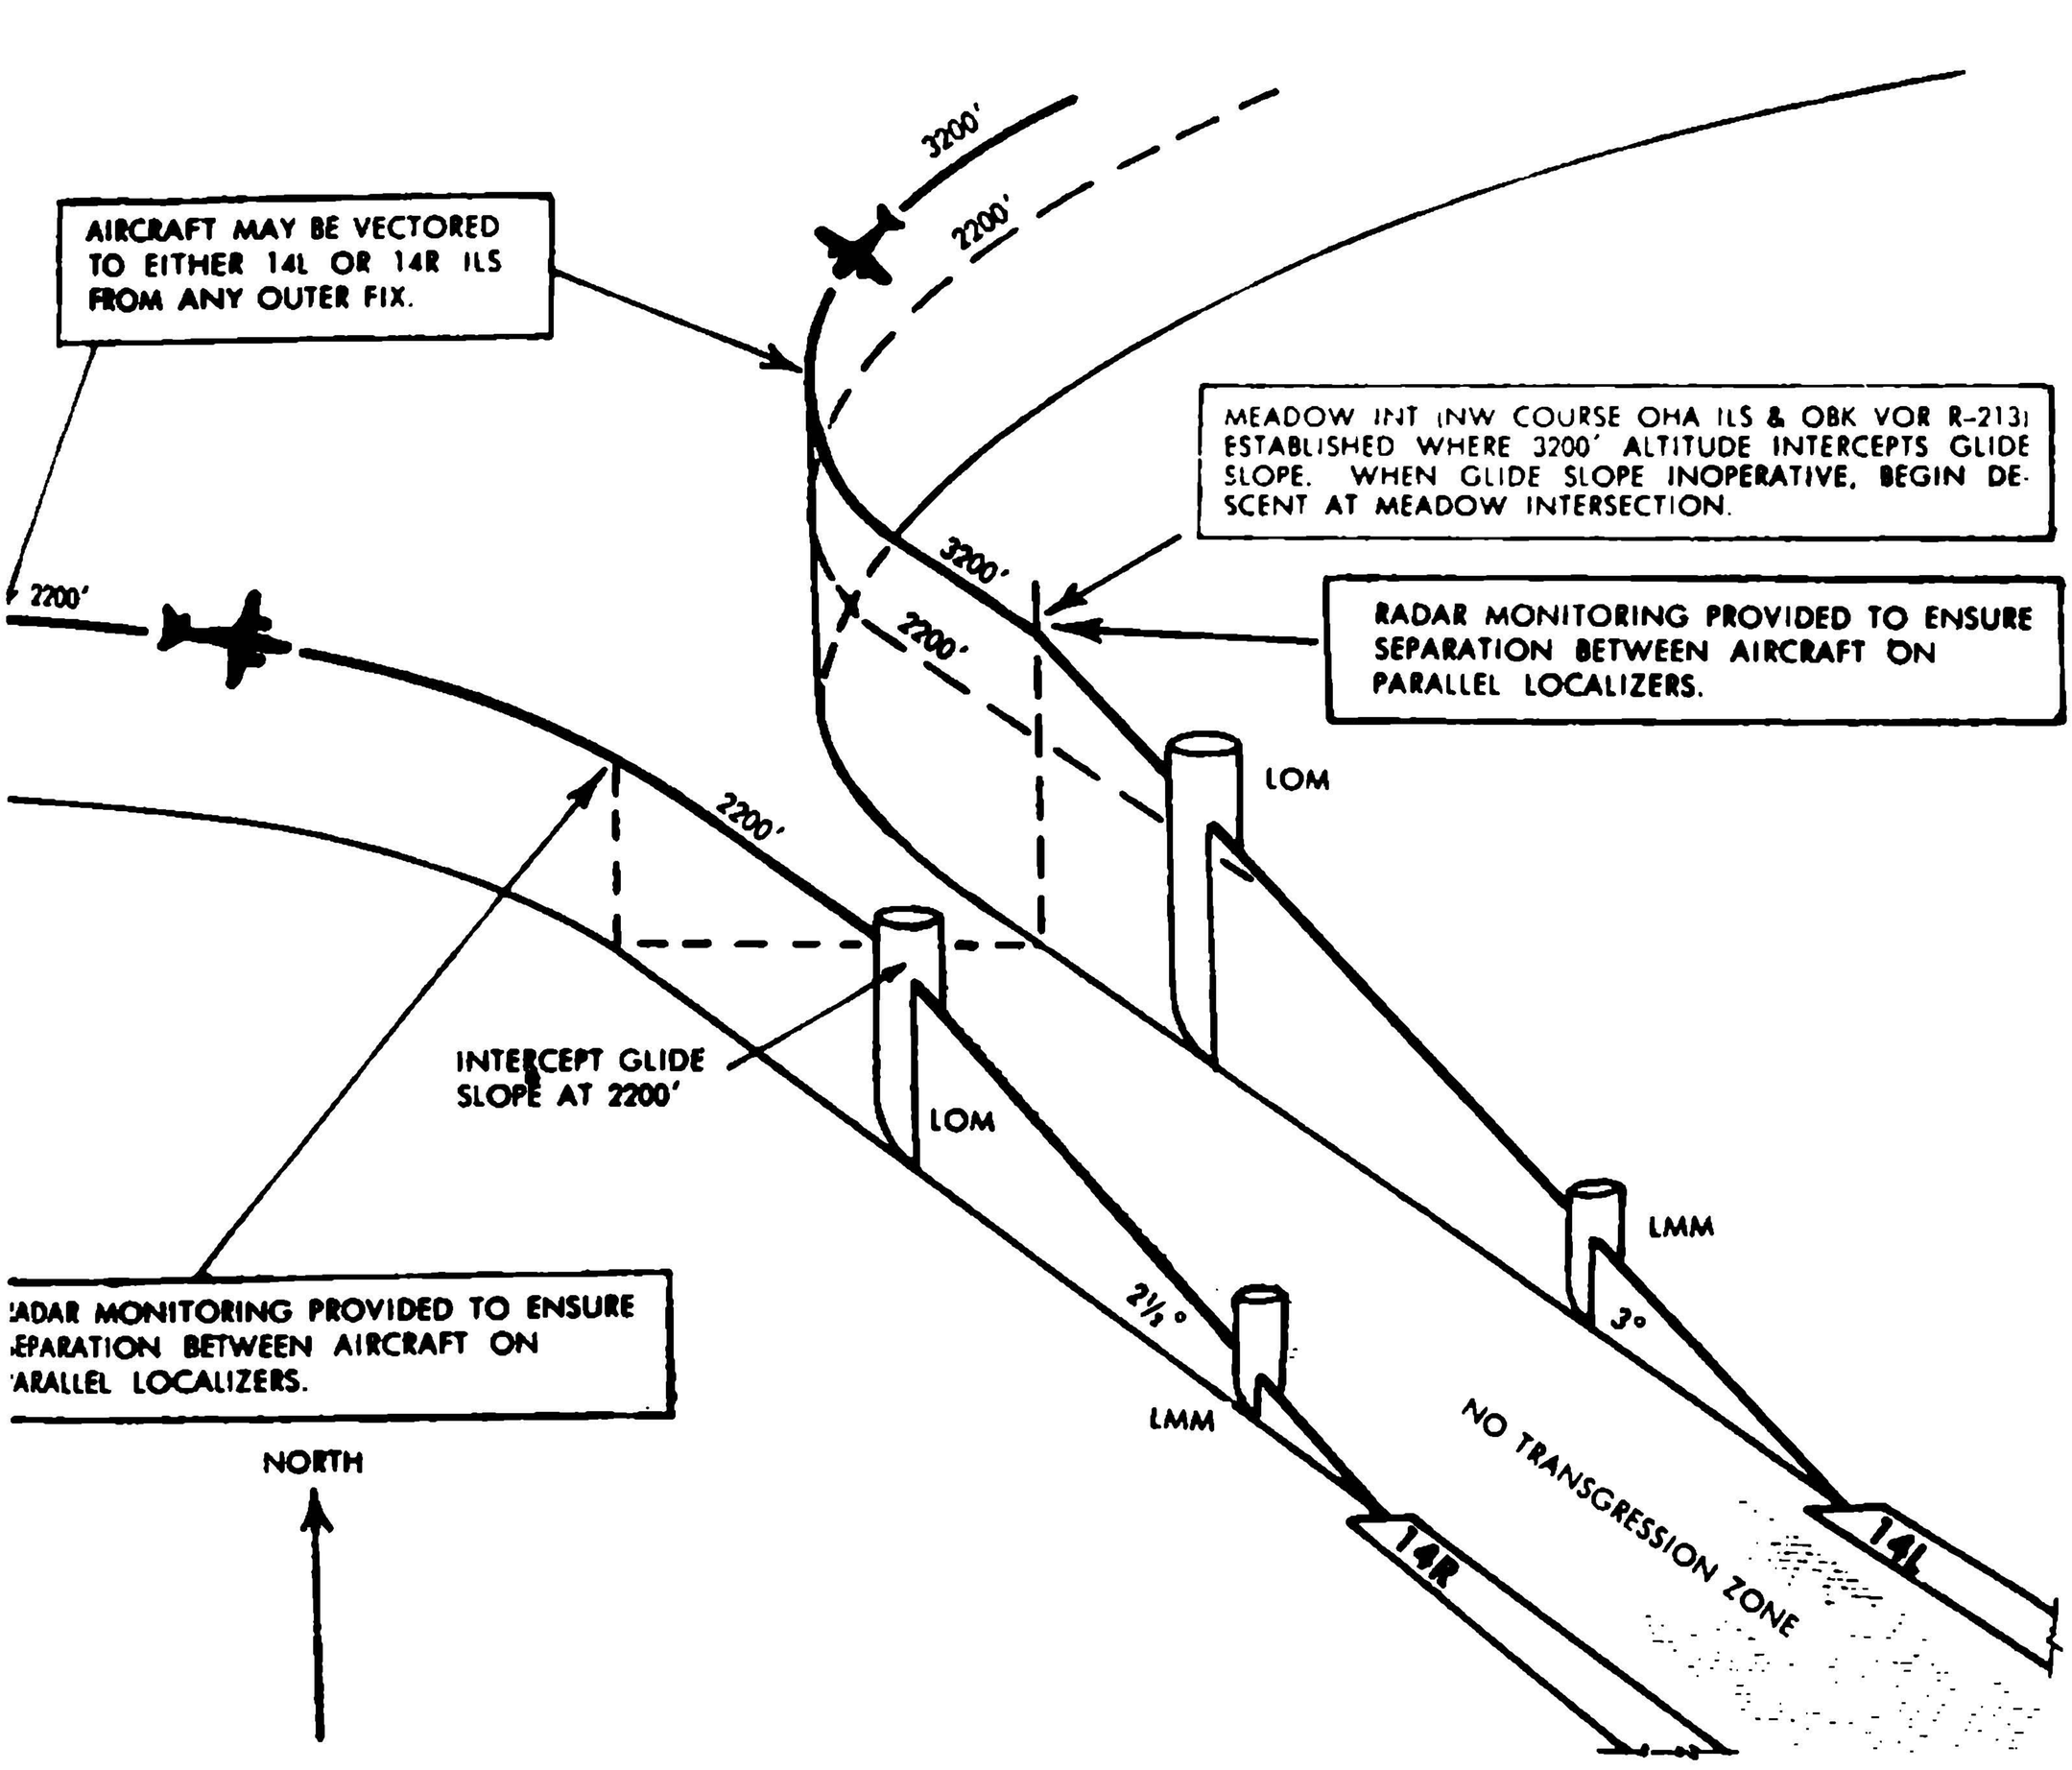
ATC Separation: Radar separation is provided between aircraft being vectored to, and while on, the same localizer course throughout the entire approach. Aircraft being vectored to Runway 14R will intercept that localizer course at 2,200 feet m.s.l. Aircraft being vectored to 14L will intercept that localizer course at 3,200 feet m.s.l., or higher. Since aircraft may be vectored to either IL localizer course from any of the four outer fixes, a mi mum of 1,000 feet vertical or 3 miles radar separati will be provided between the aircraft being vectored opposite ILS courses during the turn-on. The appropr ate ILS Intercept Altitude is maintained by the aircra until intercepting the glide slope. After the turn-on a until aircraft are 2.3 miles northwest of the out markers, a minimum of 1,000 feet vertical separation provided between aircraft on parallel ILS localiz courses.

Localizer Interception: Aircraft will be vectored so as permit the pilot to intercept the appropriate ILS localiz course at an angle not greater than 20°. After assigni this final intercept heading, approach control will cle the aircraft for a parallel ILS approach. Subsequent the pilot will be changed over to O'Hare Tower and i structed to monitor the appropriate localizer voice fr quency (either 109.7 or 110.1 mc). When glide slo receiver or ground glide slope transmitter is inoperati the pilot will begin descent from 3,200 feet for 14L Meadow Intersection or descend from 2,200 feet for 1- at the LOM. When glide slope is out or not received radar fix in lieu of Meadow Intersection will be provid upon pilots request or aircraft equipped with ILS a VOR will start descent on 14L upon identification Meadow Intersection.

Radar Monitoring: All turn-ons and final approaches a radar monitored regardless of weather conditions. Mo tor controllers will issue advisory information and c trol instructions as may be necessary to insure that a craft on final approach remain within an area 1,500 f either side of the localizer course. Since the prima responsibility for navigation rests with the pilot, advis information and control instructions issued on the loc izer voice frequency are limited to those necessary insure separation between aircraft. Pilots need n acknowledge transmissions made by the monitor c troller on localizer voice frequency unless specifica requested to do so.

A "no transgression zone" 3,510 feet wide is est lished equidistant between the centerlines of each lo izer course and displayed on the monitor radar sc Should an aircraft on final approach deviate from cou and enter the "no transgression zone," the monitor c troller will issue instructions as are necessary to alter t course of that aircraft. Concurrently, immediate act will be taken by the controller monitoring the adjace localizer course to cause any aircraft in potential con with the intruding aircraft to alter its flight path.

Missed Approach: The missed approach procedure d veloped for either runway is designed to provide sepa tion from the adjacent runway. The pilot may be i structed to execute the missed approach procedure at a time during the approach.



AIRCRAFT MAY BE VECTORED TO EITHER 14L OR 14R ILS FROM ANY OUTER FIX.

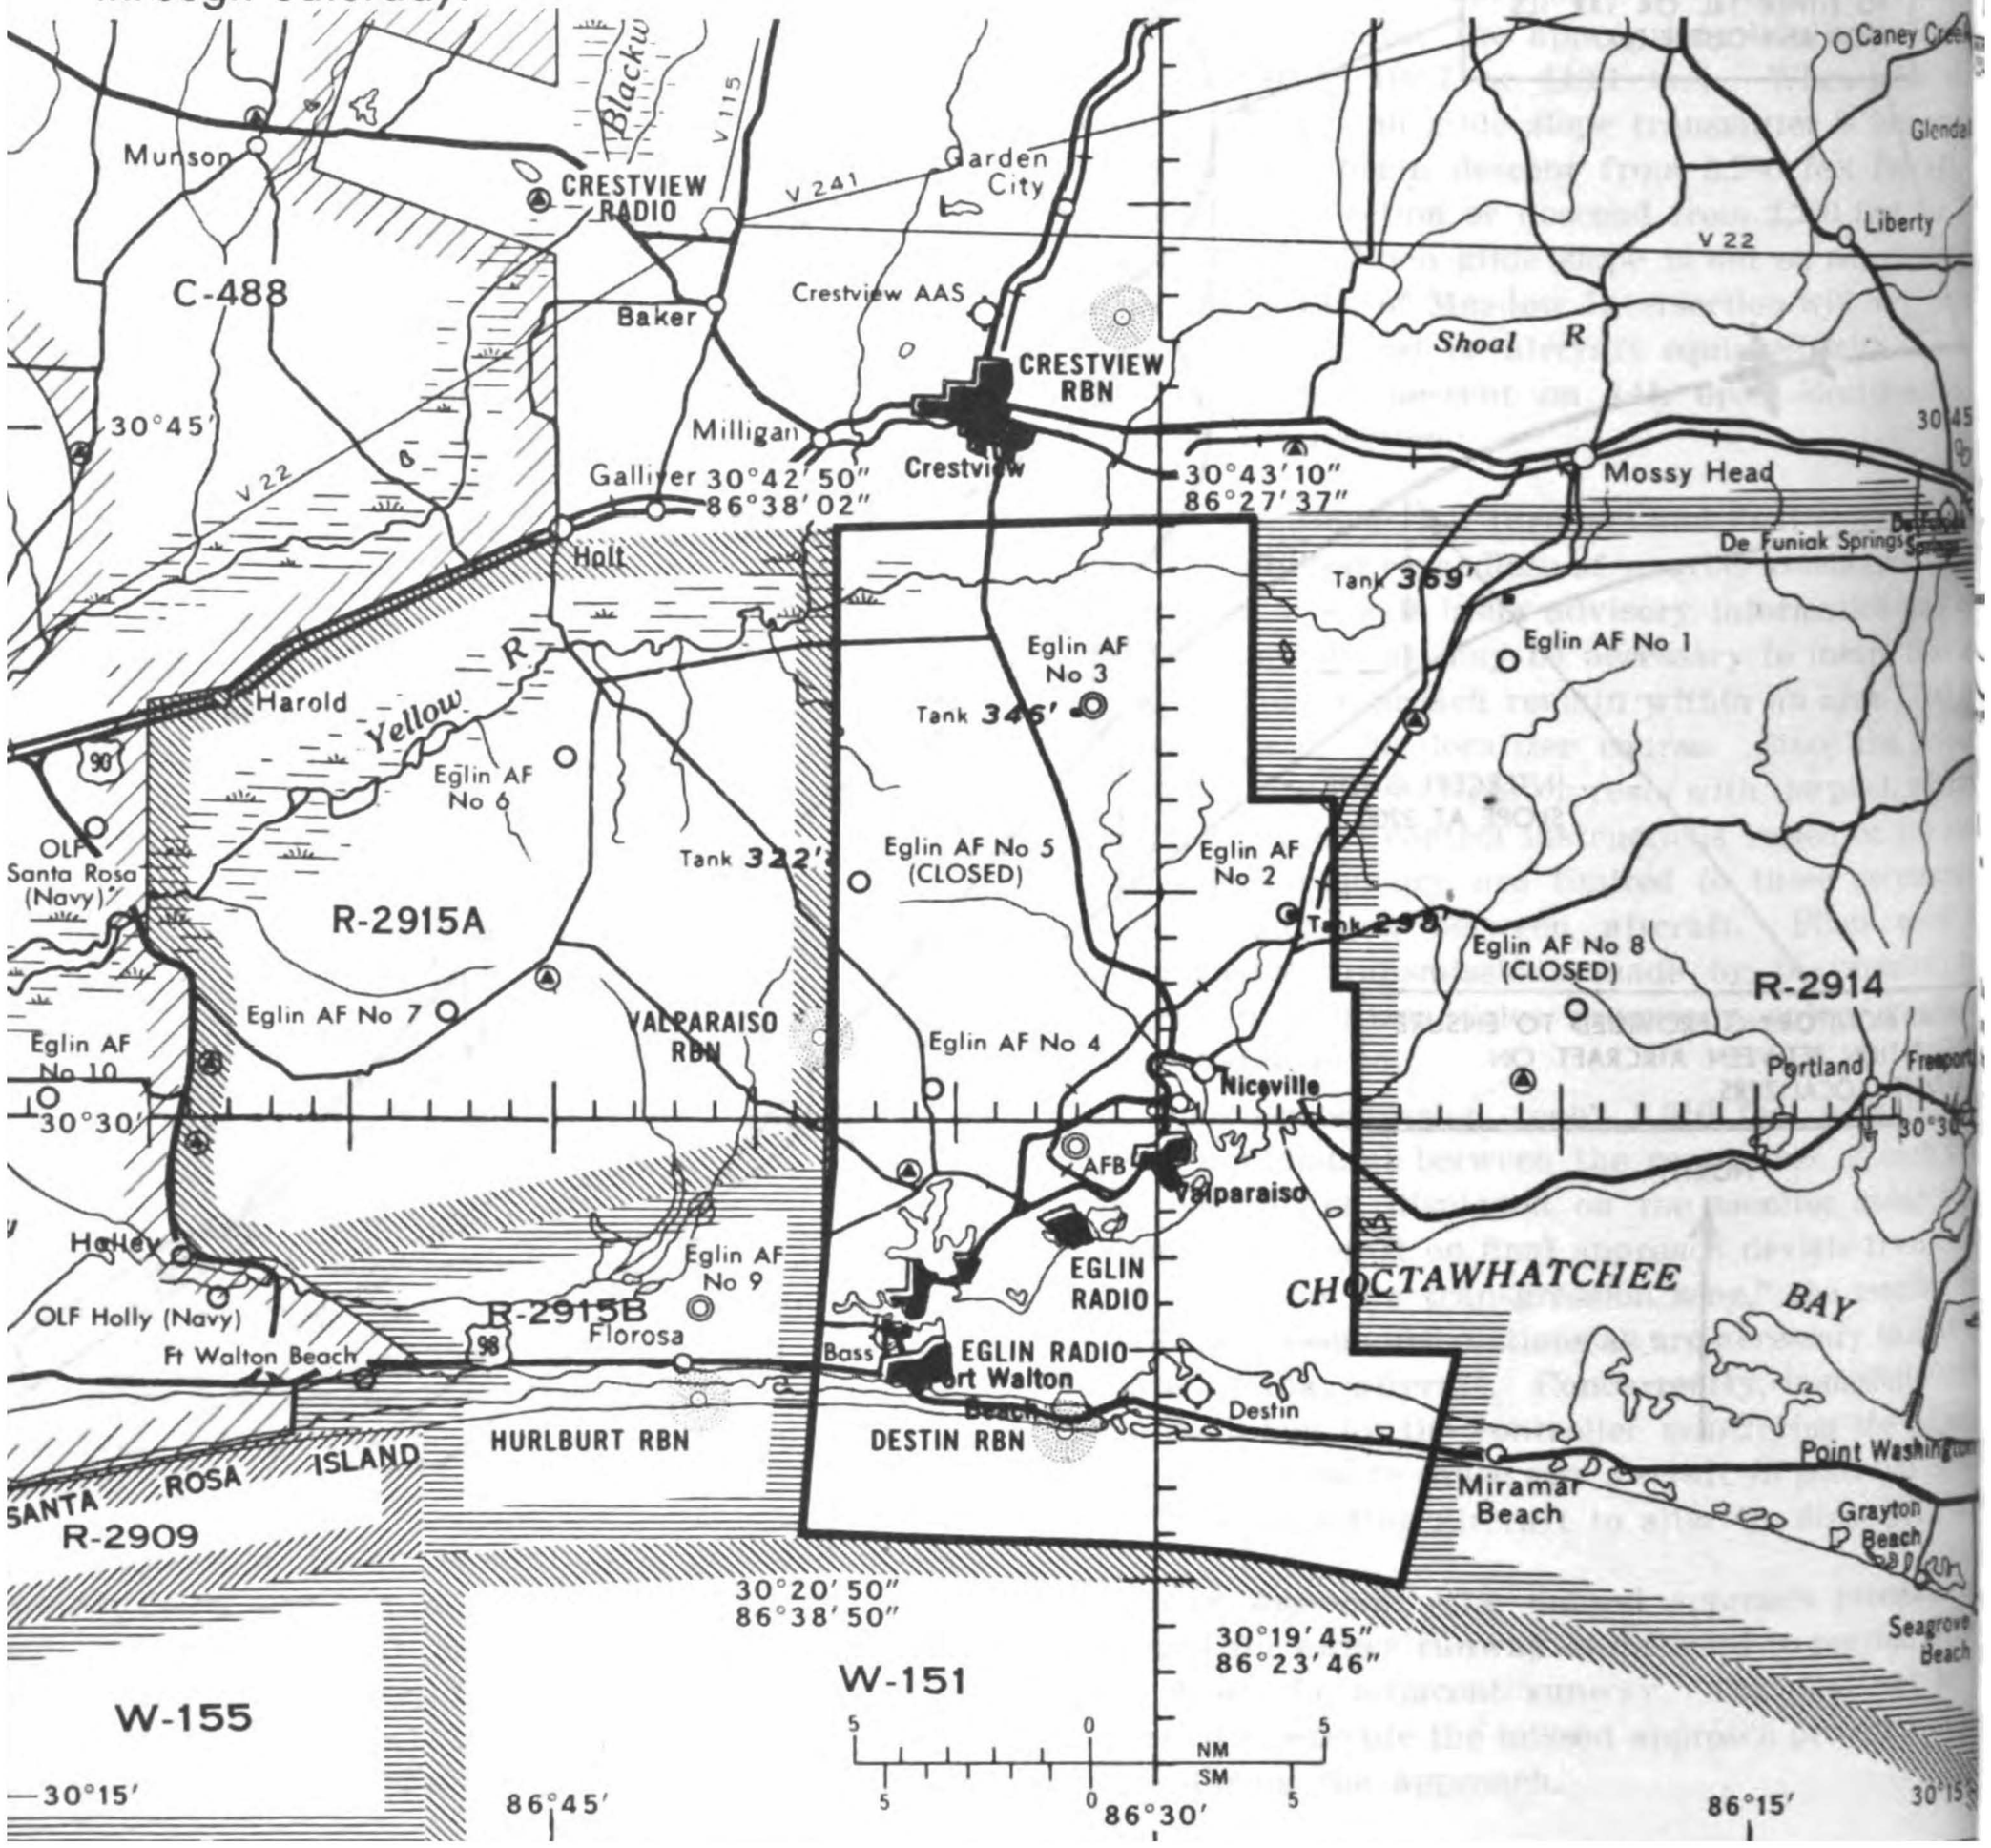
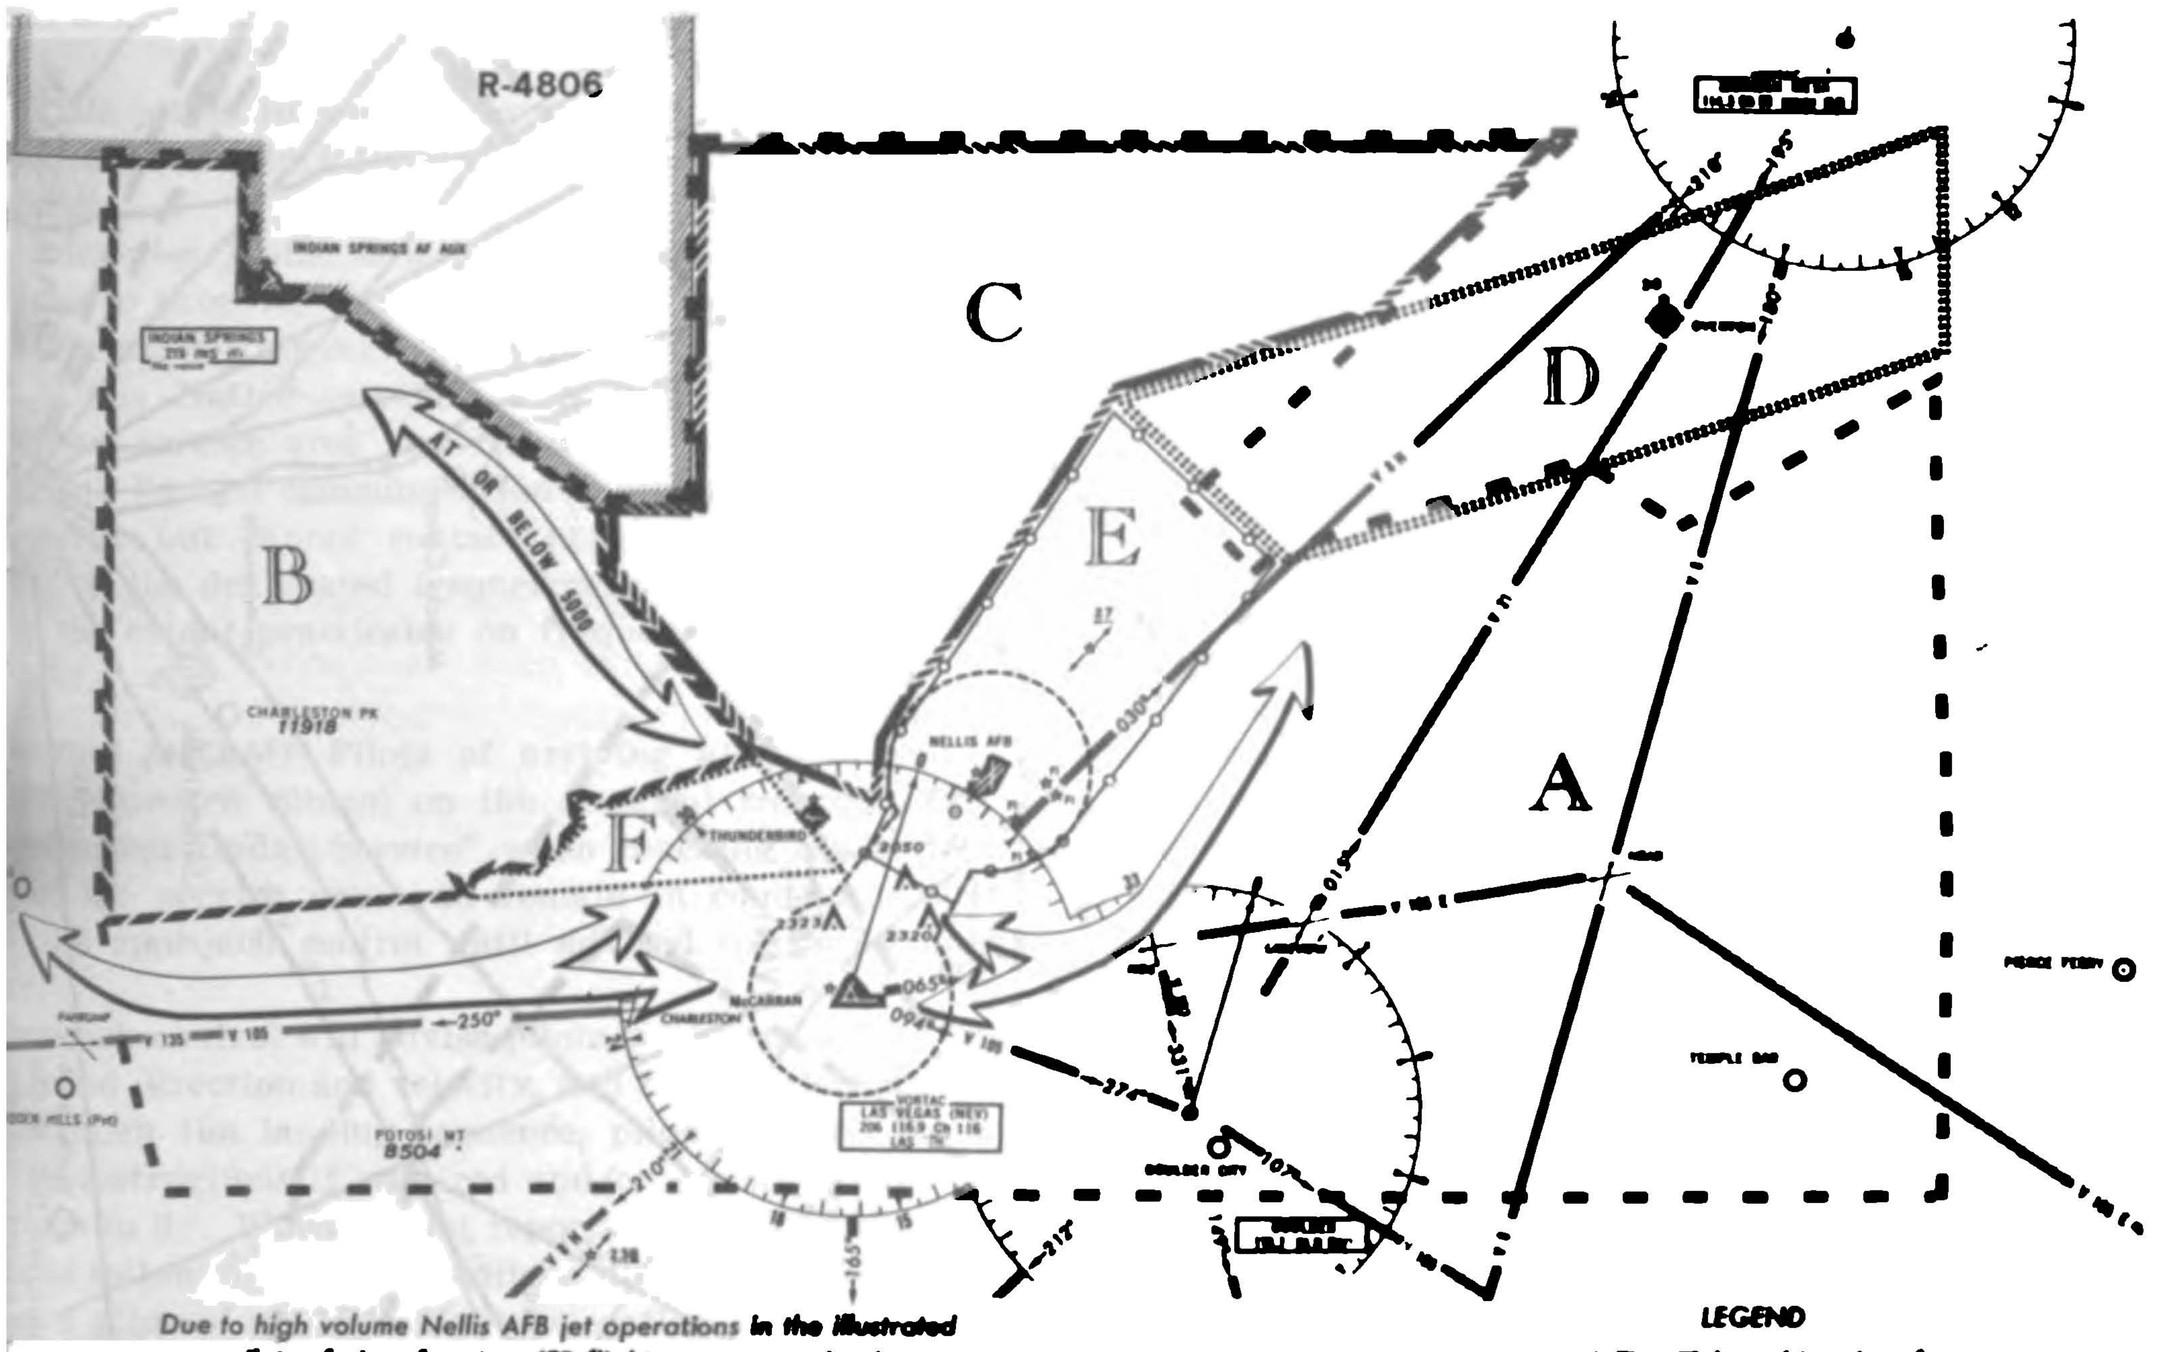
SPECIAL AIR TRAFFIC RULES (VFR OR VFR CONDITIONS)

EFFECTIVE DECEMBER 10, 1964

Prior to conducting flight operations in the area shown, pilots are required to obtain information about operating altitudes of high speed special activities conducted in the area. Normally, special activities will use not more than two altitude levels. Contact Crestview Radio, Eglin AFB RAPCON, Tallahassee Radio, or Pensacola Radio. Information may be obtained by radio or telephone. This special rule is in effect sunrise to sunset Monday through Saturday.



LAS VEGAS TERMINAL AREA NOTICE
LAS VEGAS, NEVADA



Due to high volume Nellis AFB jet operations in the illustrated area pilots of aircraft not on IFR flight plans operating into or through the Las Vegas area are encouraged to:

1. *Avoid areas of jet concentration by following suggested routings shown by arrows, at appropriate altitudes and;*
2. a. *Arriving – contact Las Vegas Approach Control on 121.1, 125.9, 284.6 or 353.6 mcs, for radar advisories when inbound prior to reaching a point approximately 30 miles from Las Vegas or if not practical, contact Las Vegas Radio for in-flight advisories.*
   b. *Departing – contact Las Vegas Departure Control on 119.4 or 335.5 mcs, for radar advisories immediately after departure from McCarran Field or Thunderbird Airport.*

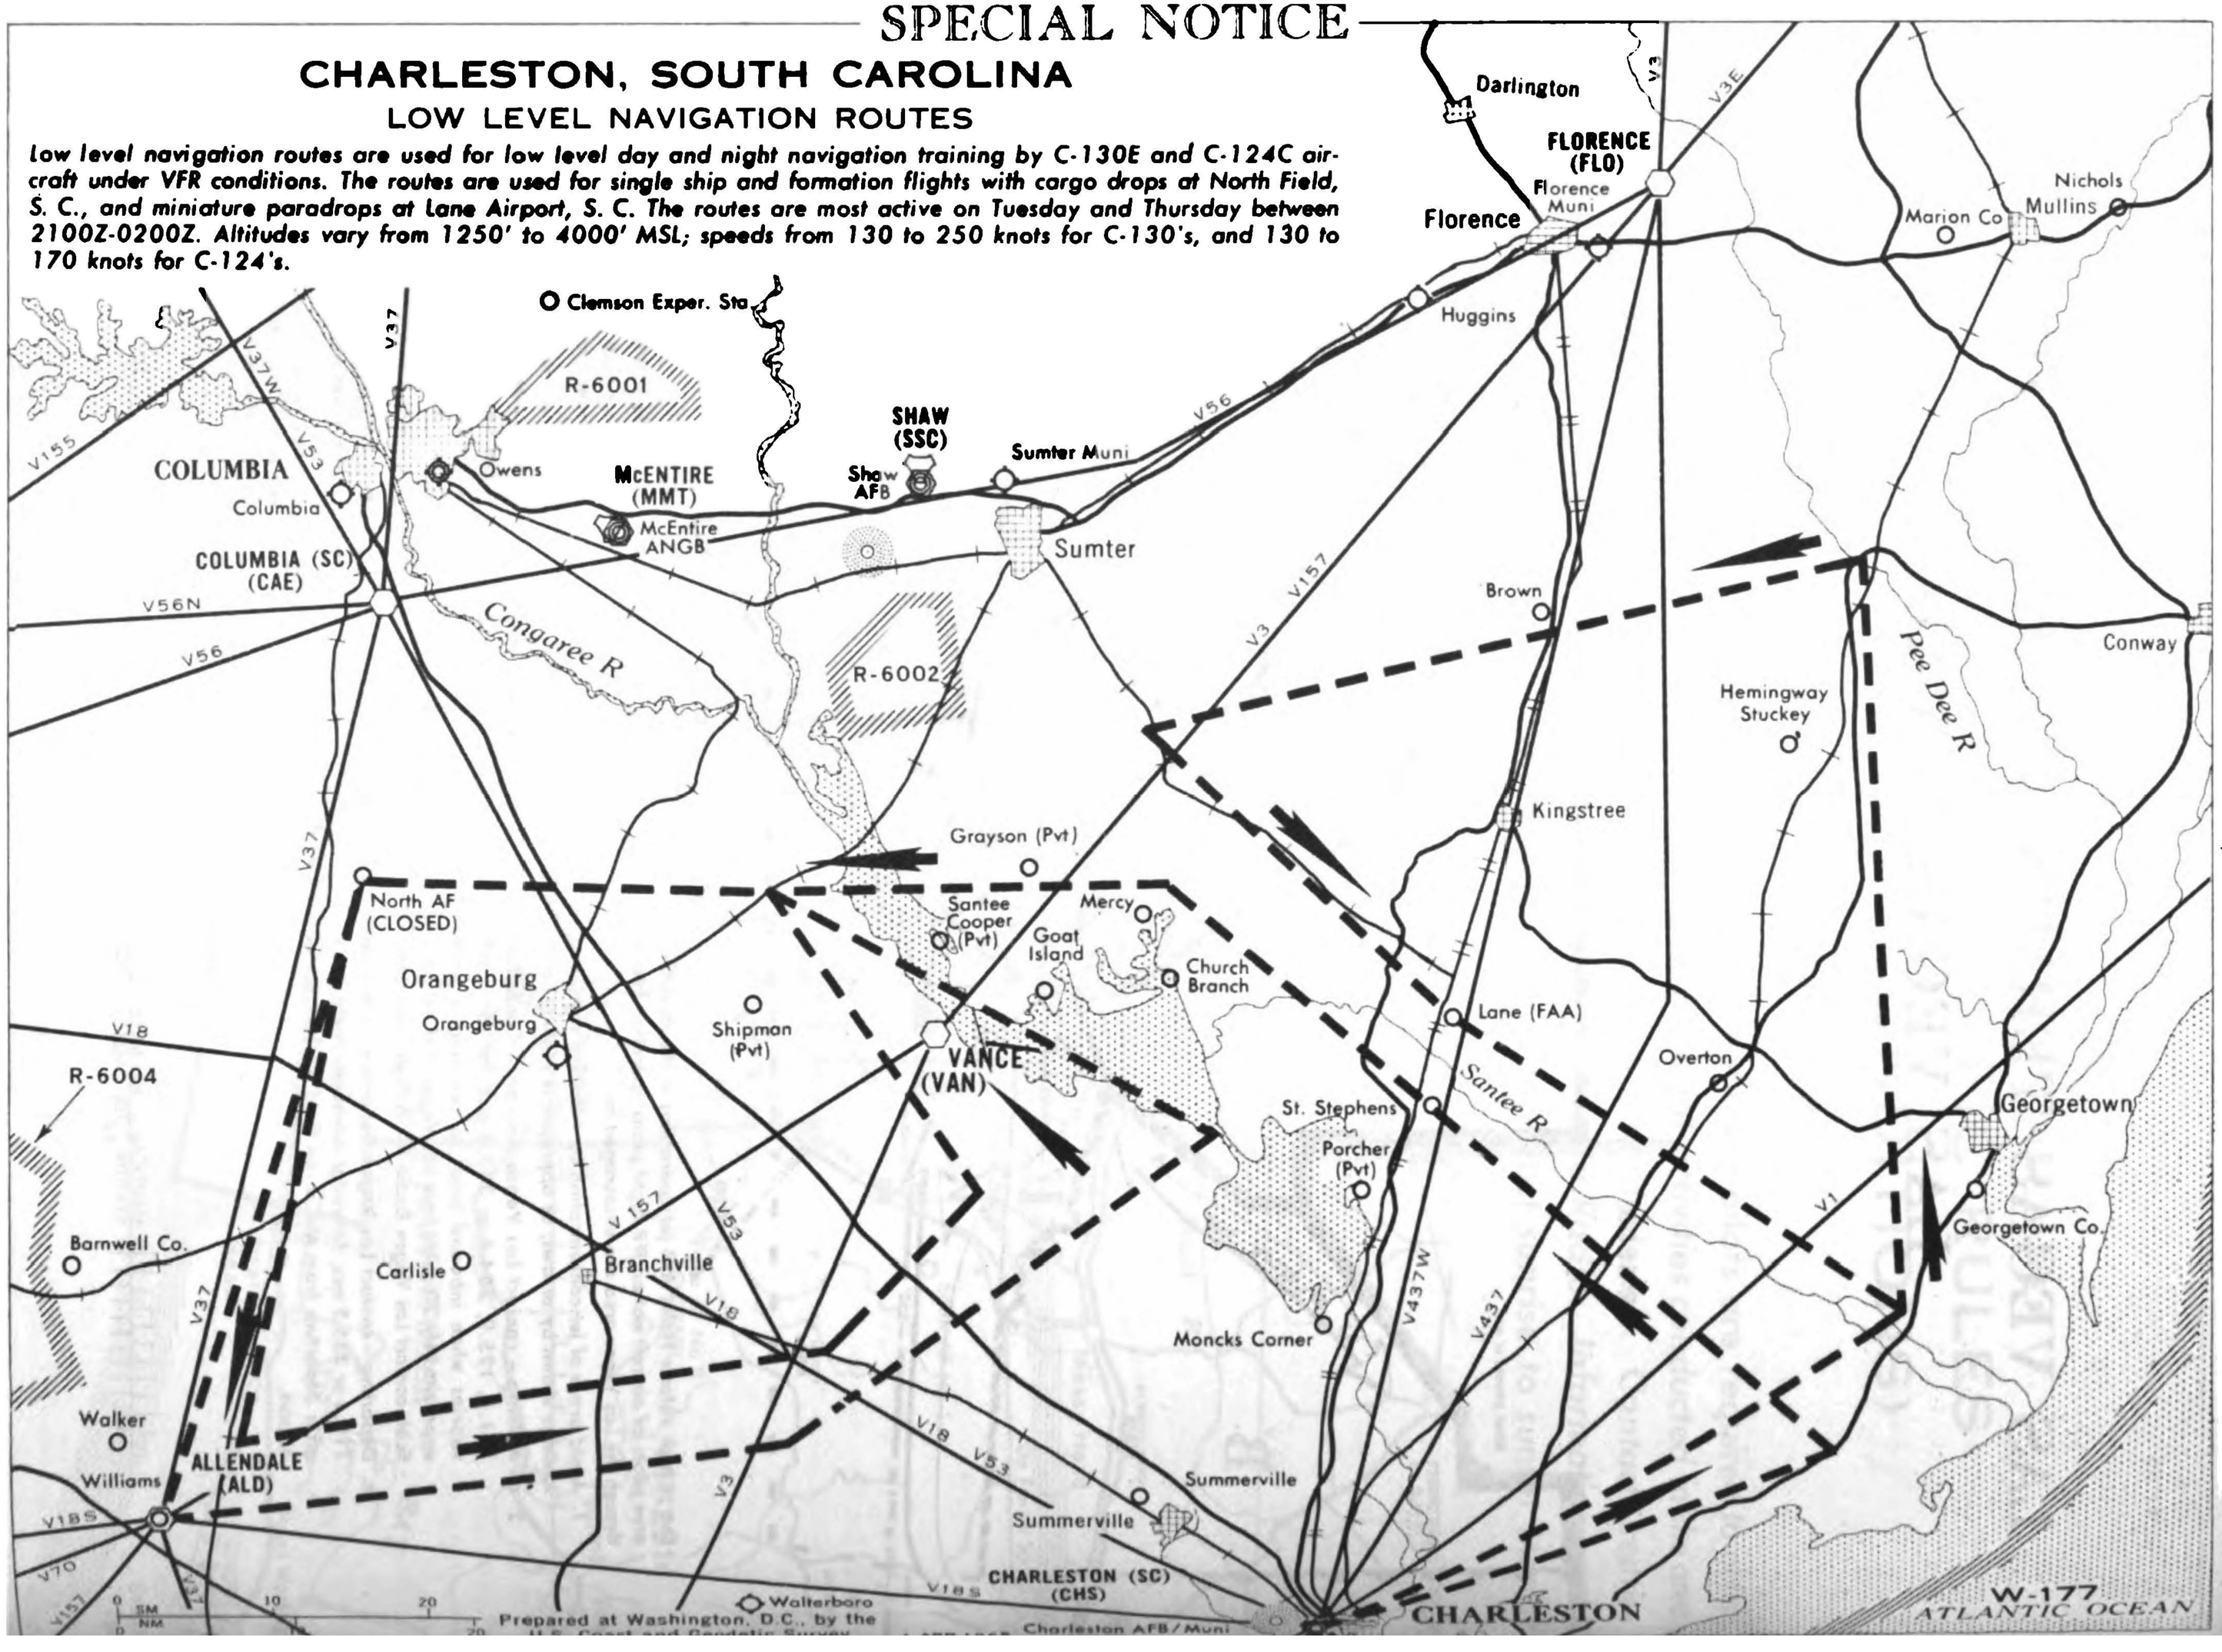
LOW LEVEL NAVIGATION ROUTES

Low level navigation routes are used for low level day and night navigation training by C-130E and C-124C aircraft under VFR conditions. The routes are used for single ship and formation flights with cargo drops at North Field, S. C., and miniature paradrops at Lane Airport, S. C. The routes are most active on Tuesday and Thursday between 2100Z-0200Z. Altitudes vary from 1250' to 4000' MSL; speeds from 130 to 250 knots for C-130's, and 130 to 170 knots for C-124's.



EXPANDED RADAR SERVICE FOR ARRIVING AND DEPARTING FLIGHTS IN TERMINAL AREAS

'ertain approach control facilities are providing ex-ded radar service for arriving and departing flights hin their terminal areas. These services are designed

1. Aid pilots to see and avoid other traffic by pro-ing radar traffic information on possible conflicting ffic, and
2. Improve traffic flow by giving specific routes or dings to properly sequence arrivals.

ations where this service is provided are listed at the of this Notice together with information on the gnated service area and frequency to be used. Air-ft with limited communication equipment who desire service but cannot contact approach or departure rol on the designated frequencies will be given serv-to the extent practicable on frequencies available to pilot.

RRIVING AIRCRAFT: Pilots of arriving aircraft should tact approach control on the assigned frequency/ies l "Request Radar Service" when reaching the perim-of the service area and remain in communication h the approach control until advised to contact the er.

pproach control will advise pilots of the runway to be d, wind direction and velocity, and traffic information. establish the landing sequence, pilots will be given ling instructions if required and/or specific routes or dings to fly. When a pilot reports he has the aircraft is to follow in sight, he will be directed to follow it. en a pilot of an IFR flight, operating in basic VFR ther conditions, is instructed to follow a preceding raft he will be cleared for a "visual approach." This rance may be issued whether or not the IFR flight is rating within the control zone. With a "visual ap-ach" clearance, the pilot operating on an IFR flight in VFR conditions may deviate from the prescribed rument approach procedure and proceed to the air-with visual reference to the surface. Radar service be terminated when aircraft are told to contact the er and the tower will assign a landing sequence ber.

EPARTING AIRCRAFT: Departing VFR aircraft desiring ffic information should "Request Radar Service" on al contact with ground control and advise proposed ction of flight. Following takeoff, the tower will ad-when to contact departure control and the frequency e used.

'hen radar contact is established, departure control provide traffic information until radar contact is lost or the flight has reached the perimeter of the service area. The pilot will be advised when radar service is terminated.

TRAFFIC INFORMATION: Standard radar separation will be provided between aircraft operating in accordance with Instrument Flight Rules until such time as the aircraft is sequenced and the pilot sees the aircraft he is to follow. Standard radar separation between VFR or between VFR and IFR aircraft will not be provided; instead, traffic information will be issued to the appropriate aircraft prior to the time less than 3 nmi exists between one identified VFR flight and another identified flight, either VFR or IFR. Traffic information on other observed but unidentified radar targets will be issued to the extent controller workload permits. Pilots may request radar vectors to avoid reported traffic and vectors will be given to the extent possible consistent with controller workload.

Pilot participation in this program is not mandatory but is strongly urged since the success of the program is largely dependent on full pilot participation.

THESE PROCEDURES ARE NOT TO BE INTERPRETED AS RELIEVING PILOT OF THEIR RESPONSIBILITIES TO SEE AND AVOID OTHER TRAFFIC OPERATING IN BASIC VFR WEATHER CONDITIONS, TO MAINTAIN APPROPRIATE TERRAIN AND OBSTRUCTION CLEARANCE, OR TO REMAIN IN WEATHER CONDITIONS EQUAL TO OR BETTER THAN THE MINIMA REQUIRED BY FAR 91.105. WHENEVER COMPLIANCE WITH AN ASSIGNED ROUTE OR HEADING IS LIKELY TO COMPROMISE SAID PILOT RESPONSIBILITY RESPECTING TERRAIN AND OBSTRUCTION CLEARANCE AND WEATHER MINIMA, APPROACH CONTROL SHOULD BE SO ADVISED AND A REVISED CLEARANCE OR INSTRUCTION OBTAINED.

LOCATIONS AT WHICH THE ABOVE RADAR SERVICE IS PROVIDED

John F. Kennedy Intl Airport, N.Y.

EFFECTIVE DATE: 16 AUGUST 1962

Area Within Which Service is Provided: Approximately 25 nautical mile radius of John F. Kennedy Intl Airport exclusive of LaGuardia, Newark, and Floyd Bennett NAS control zones. **Arrival Frequencies:** Aircraft flying to the airport, contact approach control on 120.8 mc. Aircraft not equipped for two-way communication on 120.8 mc should transmit 122.7 mc and listen on 120.8 mc. **Departure Frequencies:** N and W bound 123.9 mc or 269.4 mc; all others 121.1 mc or 269.4 mc.

Houston International Airport, Tex.

EFFECTIVE DATE: 1 SEPTEMBER 1962

Area Within Which Service is Provided: At least 25 nmi from the airport. **Arrival Frequencies:** Aircraft flying to the airport on headings of 189° thru 037° contact approach control on 118.3 mc or 379.1 mc. Those flying headings of 038° thru 188° use 118.1 mc or 307.1 mc. Aircraft not equipped for two-way communication on those frequencies should transmit 122.5 mc and listen on the appropriate frequency specified above or a frequency/ies assigned by the facility. **Departure Frequencies:** 123.7 mc or 290.2 mc.

El Paso International Airport, Texas and Biggs AFB, Texas

EFFECTIVE DATE: 1 SEPTEMBER 1962

Area Within Which Service is Provided: At least 25 mi from the airports. **Arrival Frequencies:** Aircraft should use 118.7 mc or 307.0 mc. Aircraft not equipped for two-way communications on those frequencies should transmit 122.7 mc and listen on the appropriate listed frequency. **Departure Frequencies:** The tower will advise pilots of departing VFR flights who have requested the service when to contact departure control and the frequency to be used.

Los Angeles International Airport, California

EFFECTIVE DATE: 22 SEPTEMBER 1964

Area within which service is provided: 25 nmi. **Arrival Freq:** 045–224 degrees inbound, 119.3 or 381.6 mc. 225–044 degrees inbound, 124.9 or 260.0 mc. If not so equipped, trans 122.7 mc and guard above freq or LAX VOR. **Departure Freq:** tower, 118.9 mc. then departure control o: 125.2 or 385.4 mc when outbound 225–045 degrees, 124. or 363.2 mc, 045–225 degrees.

Weir-Cook, Indianapolis, Indiana

EFFECTIVE DATE: 14 SEPTEMBER 1964

Area within which service is provided: 20 nmi, 4000' an below. **Arrival Freq:** 118.5 mc. **Departure freq:** ground contro 121.9 mc then Indianapolis Departure Radar Servic 121.3 mc. Enroute aircraft contact Indianapolis Termin Radar Service, 118.5 mc.

Logan International Airport, Boston, Mass.

EFFECTIVE DATE: 17 FEBRUARY 1965

Area in which service is provided: Approximately 25 na tical mile radius of Logan International Airport. **A rival frequencies:** Aircraft flying to the airport on headin. of 035° through 140° should use the frequencies 12 or 281.5 mcs. Those flying headings of 141° throu 034° use 120.6 or 263.1 mcs. Aircraft not so equip should transmit on 122.5 mcs. and listen on the app priate frequency. **Departure frequencies:** 119.1 or 343.6 m

Friendship Intl Airport, Baltimore, Maryland

EFFECTIVE DATE: 11 February 1965

AREA IN WHICH SERVICE IS PROVIDED: Approximately mi radius. **Arrival freq:** In bound on 101° thru 281 u 121.1 mc or 360.8 mc; inbound on 282° thru 100 u 125.9 mc or 307.9 mc. **Departure freq:** 120.4 or 381.4 m when advised by tower.

MILITARY AERIAL REFUELING TRACKS

itary aircraft conduct refueling operations throughout the continental United States normally between 12,000 feet MSL and FL 240 on an IFR flight plan at assigned altitude(s). Refueling aircraft have right of way over other aircraft in accordance with FAR 91.67(c)

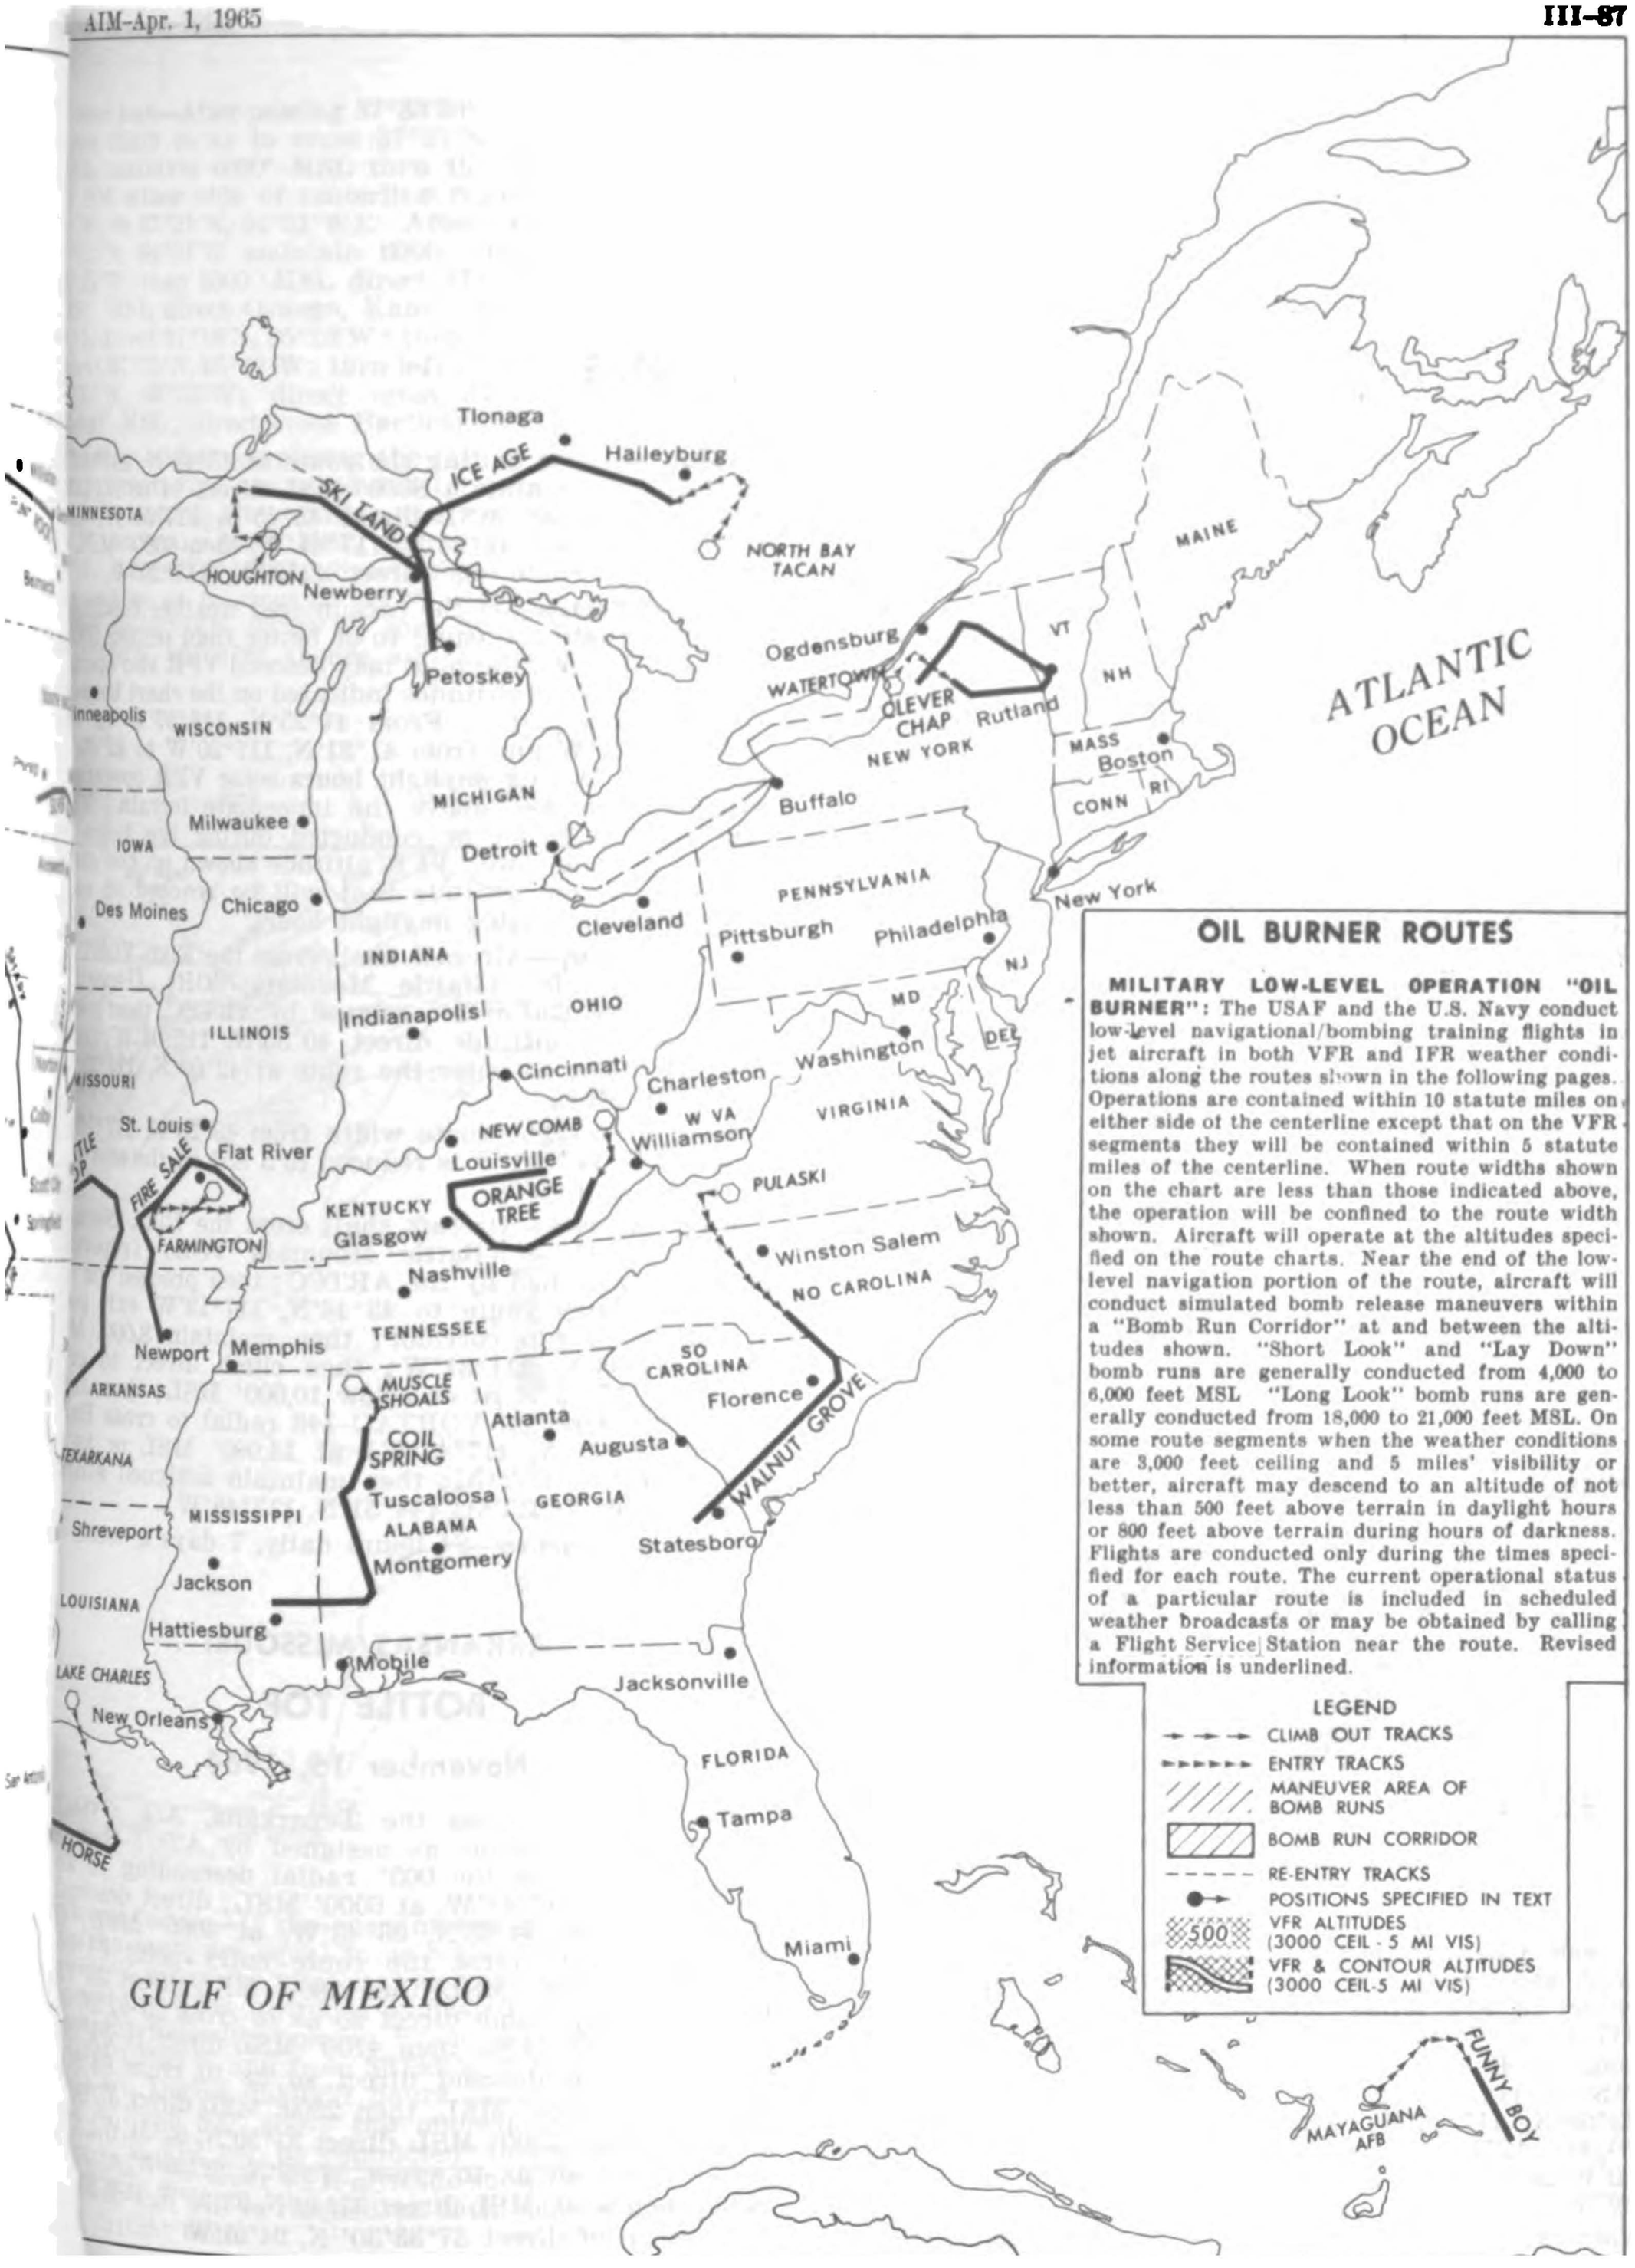
INDEX OF OIL BURNER ROUTES



OIL BURNER ROUTES

MILITARY LOW-LEVEL OPERATION "OIL BURNER": The USAF and the U.S. Navy conduct low-level navigational/bombing training flights in jet aircraft in both VFR and IFR weather conditions along the routes shown in the following pages. Operations are contained within 10 statute miles on either side of the centerline except that on the VFR segments they will be contained within 5 statute miles of the centerline. When route widths shown on the chart are less than those indicated above, the operation will be confined to the route width shown. Aircraft will operate at the altitudes specified on the route charts. Near the end of the low-level navigation portion of the route, aircraft will conduct simulated bomb release maneuvers within a "Bomb Run Corridor" at and between the altitudes shown. "Short Look" and "Lay Down" bomb runs are generally conducted from 4,000 to 6,000 feet MSL "Long Look" bomb runs are generally conducted from 18,000 to 21,000 feet MSL. On some route segments when the weather conditions are 3,000 feet ceiling and 5 miles' visibility or better, aircraft may descend to an altitude of not less than 500 feet above terrain in daylight hours or 800 feet above terrain during hours of darkness. Flights are conducted only during the times specified for each route. The current operational status of a particular route is included in scheduled weather broadcasts or may be obtained by calling a Flight Service Station near the route. Revised information is underlined.

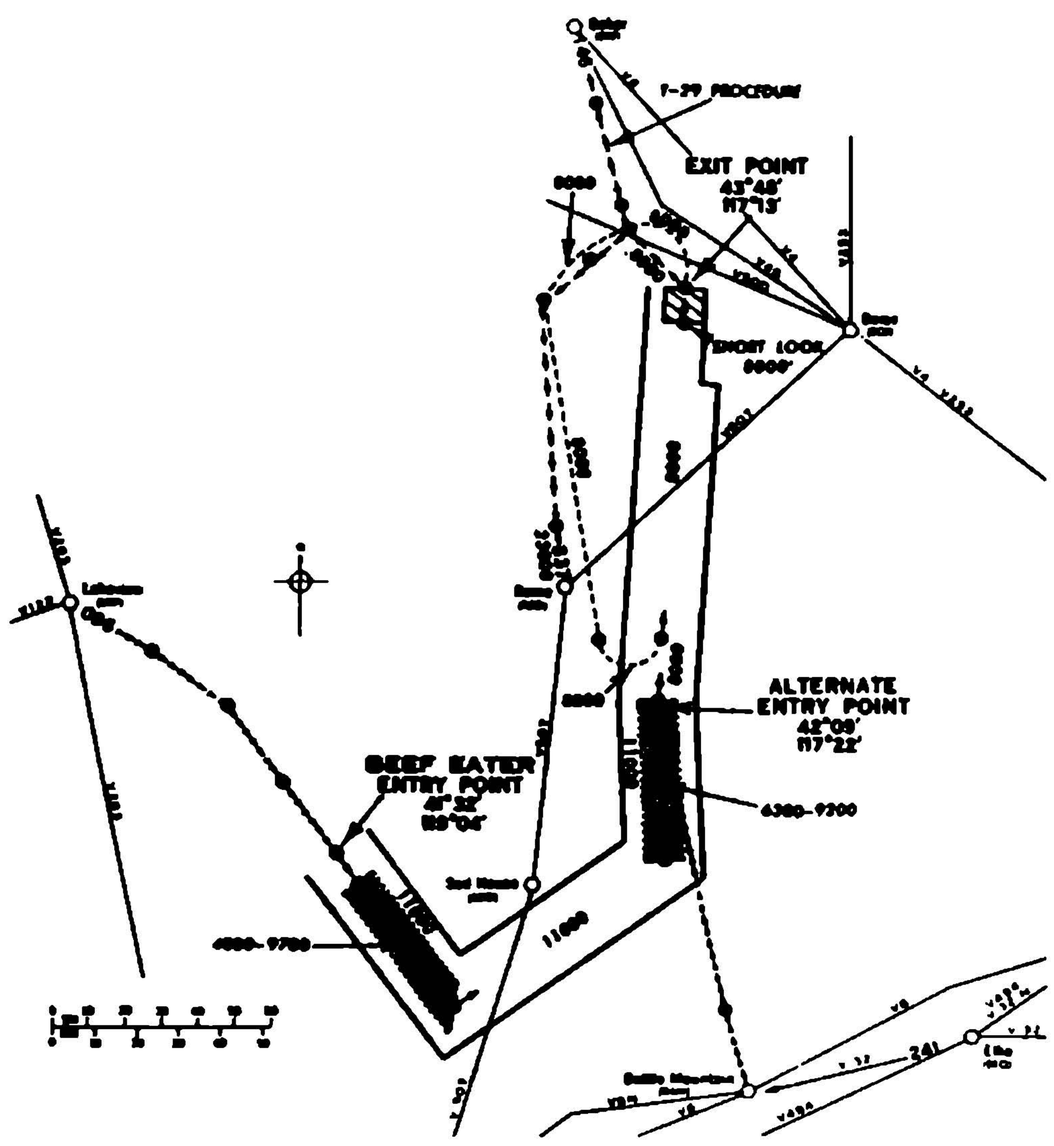
OIL BURNER ROUTES

NEVADA/OREGON

BEEF EATER

Effective May 3, 1964

Aircraft shall cross the Lakeview, Ore. VORTAC (reporting point) at FL 230, or as assigned by ARTCC; then maintain assigned altitude via the Lakeview 096° radial until 22 NM east of the Lakeview VORTAC (42°-20'N, 120°04'W); then descend direct to cross 42°07'N, 119°39'W at or below FL 230; then descend direct to cross 41°49'N, 119°21'W at or above 16,000' MSL; then descend direct to cross the entry point of the low level route at 41°32'N, 119°04'W at 11,000' MSL, then 11,000' MSL direct 40°55'N, 118°27'W, then 11,000' MSL direct 41°31'N, 117°20'W, then 11,000'. MSL direct 42°09'N, 117°22'W; then descend to cross 42°26'N, 117°20'W at 8000' MSL, then 8000' MSL direct 43°40'N, 117°13'30''W.



Short Look—After passing 43°40'N, 117°13'30''W aircraft shall maintain 8000' MSL thru the bomb run corridor (5 SM either side of centerline from 43°40'N, 117°13'30''W to 43°48'N, 117°13'W). After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 43°55'N, 117°44'W (reporting point—Beef Eater 1) at 10,000' MSL; then climb direct to cross 43°45'N, 117°-59'W at or above 14,000' MSL; then climb direct to cross 42°51'N, 117°54'W at FL 230, then maintain FL 230 via the Rome 337° radial to the Rome, Oregon. VOR.

Re-Entry—After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W, then 8000' MSL direct 43°45'N, 117°59'W, then 8000' MSL direct 42°24'N, 117°41'W, then 8000' MSL to re-enter the route via direct 42°26'N, 117°20'W.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000' visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 41°25'N, 118°57'W to 40°-55'N, 118°27'W and from 41°31'N, 117°20'W to 42°09'N, 117°22'W. During daylight hours some VFR operations will be flown 800' above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Elko VORTAC 241/54 DME fix (Battle Mountain VOR) (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned altitude direct 40°55'N, 117°01'W; then descend direct to enter the route at 42°09'N, 117°22'W at 11,000' MSL.

Route Width—The route width from 43°25'N, 117°15'W to 43°48'N, 117°13'W is reduced to 5 SM on the east side of the centerline.

T–29 Procedure—Aircraft shall cross the Elko, Nevada VORTAC 241/54 (Battle Mountain VOR) (reporting point) as assigned by the ARTCC; then proceed via the alternate entry route to 43°48'N, 117°13'W exit point of the bomb run corridor; then maintain 8,000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 44°08'N, 117°33'W at or below 10,000' MSL; then direct via Baker, Oregon, VORTAC 146 radial to cross Baker 146/19 (44°32'N, 117°42'W) at 14,000' MSL or as assigned by the ARTCC; then maintain assigned altitude direct Baker VORTAC (44°51'N, 117°48'W).

Hours of Operation—24 hours daily, 7 days a week.

ARKANSAS/MISSOURI

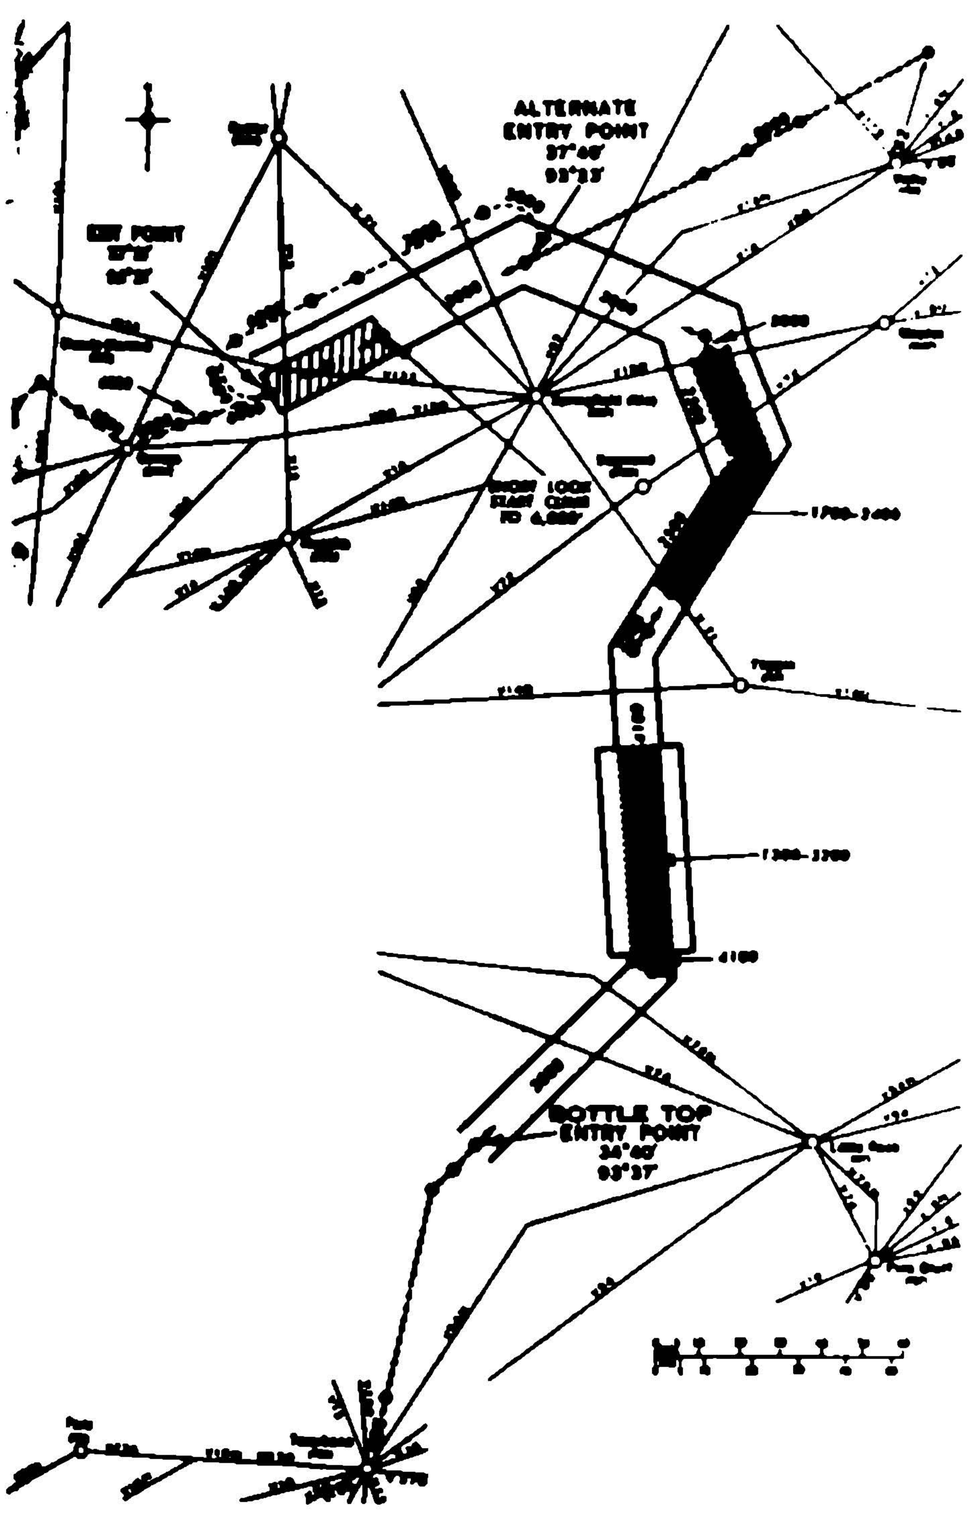
BOTTLE TOP

November 15, 1964

Aircraft shall cross the Texarkana, Ark. VORTAC 005/15 at FL 190 or as assigned by ATC; then proceed outbound on the 005° radial descending so as to cross 34°31'N, 93°48'W, at 6000' MSL; direct descending so as to cross 34°35'N, 93°43'W, at 4000' MSL; then direct so as to cross the route entry point 34°40'N 93°37'W at 2800' MSL, then 2800' MSL direct 35°17'N 92°51'W; then climb direct so as to cross 35°21'N, 92°-51'W, at 4100' MSL, then 4100' MSL direct to 36°26'N 92°55'W; then descend direct so as to cross 36°30'N 92°52'W, at 2500' MSL, then 2500' MSL direct 37°06'N 92°23'W, then 2500' MSL direct 37°30'N, 92°34'W; then climb direct so as to cross 37°33'N, 92°35'W at 3000' MSL, then 3000' MSL direct 37°49'N, 93°23'W, then 3000' MSL turn lef direct 37°33'30''N, 94°01'W.

Short Look—After passing 37°33'30"N, 94°01'W, aircraft all climb so as to cross 37°27'N, 94°16'W, at 6000' MSL, maintain 6000' MSL thru the bomb run corridor 5 SM either side of centerline from 37°33'30"N, 94°-1'W, to 37°21'N, 94°31'W). After exiting the route at 37°21'N, 94°31'W maintain 6000' MSL direct 37°16'N, 94°49'W, then 6000' MSL direct 37°14'N, 94°56'W, then 6000' MSL direct Oswego, Kans. VOR, maintain 6000' MSL direct 37°16'N, 95°28'W; then start climb to FL 230 direct 37°22'N, 95°42'W; turn left continuing climb direct 37°17'N, 95°52'W; direct cross 37°13'N, 95°53'W at 6000' MSL; direct cross Bartlesville, Okla. at FL 230.

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°21'N, 94°-31'W, maintain 6000' MSL, turn right to 37°32'N, 94°-31'W, then 6000' MSL direct 37°41'N, 94°20'W; then descend so as to cross 37°46'N, 94°08'W at 3000' MSL direct to 38°00'N, 93°34'W, then 3000' MSL turn right 37°49'N, 93°23'W, thence via the published route.



Alternate Entry—Aircraft shall cross the Vichy, Mo. VORTAC 012/25 at 15,000' MSL or as assigned by ATC. Descend direct so as to cross 38°19'N, 92°08'W at 8000' MSL; then at 8000' MSL direct to 38°13'N, 92°22'W; then descend so as to cross 38°08'N, 92°34'W at 4000' MSL; then continue descent so as to cross 37°49'N, 93°23'W at 3000' MSL. Thence via published route.

Route Width—The route width from 34°40'N, 93°37'W to 35°21'N, 92°51'W and from 36°05'N, 92°53'W to 37°-06'N, 92°23'W is reduced to 5 SM either side of centerline and 5 SM on the south side of centerline from 37°33'N, 92°35'W to 37°21'N, 94°31'W.

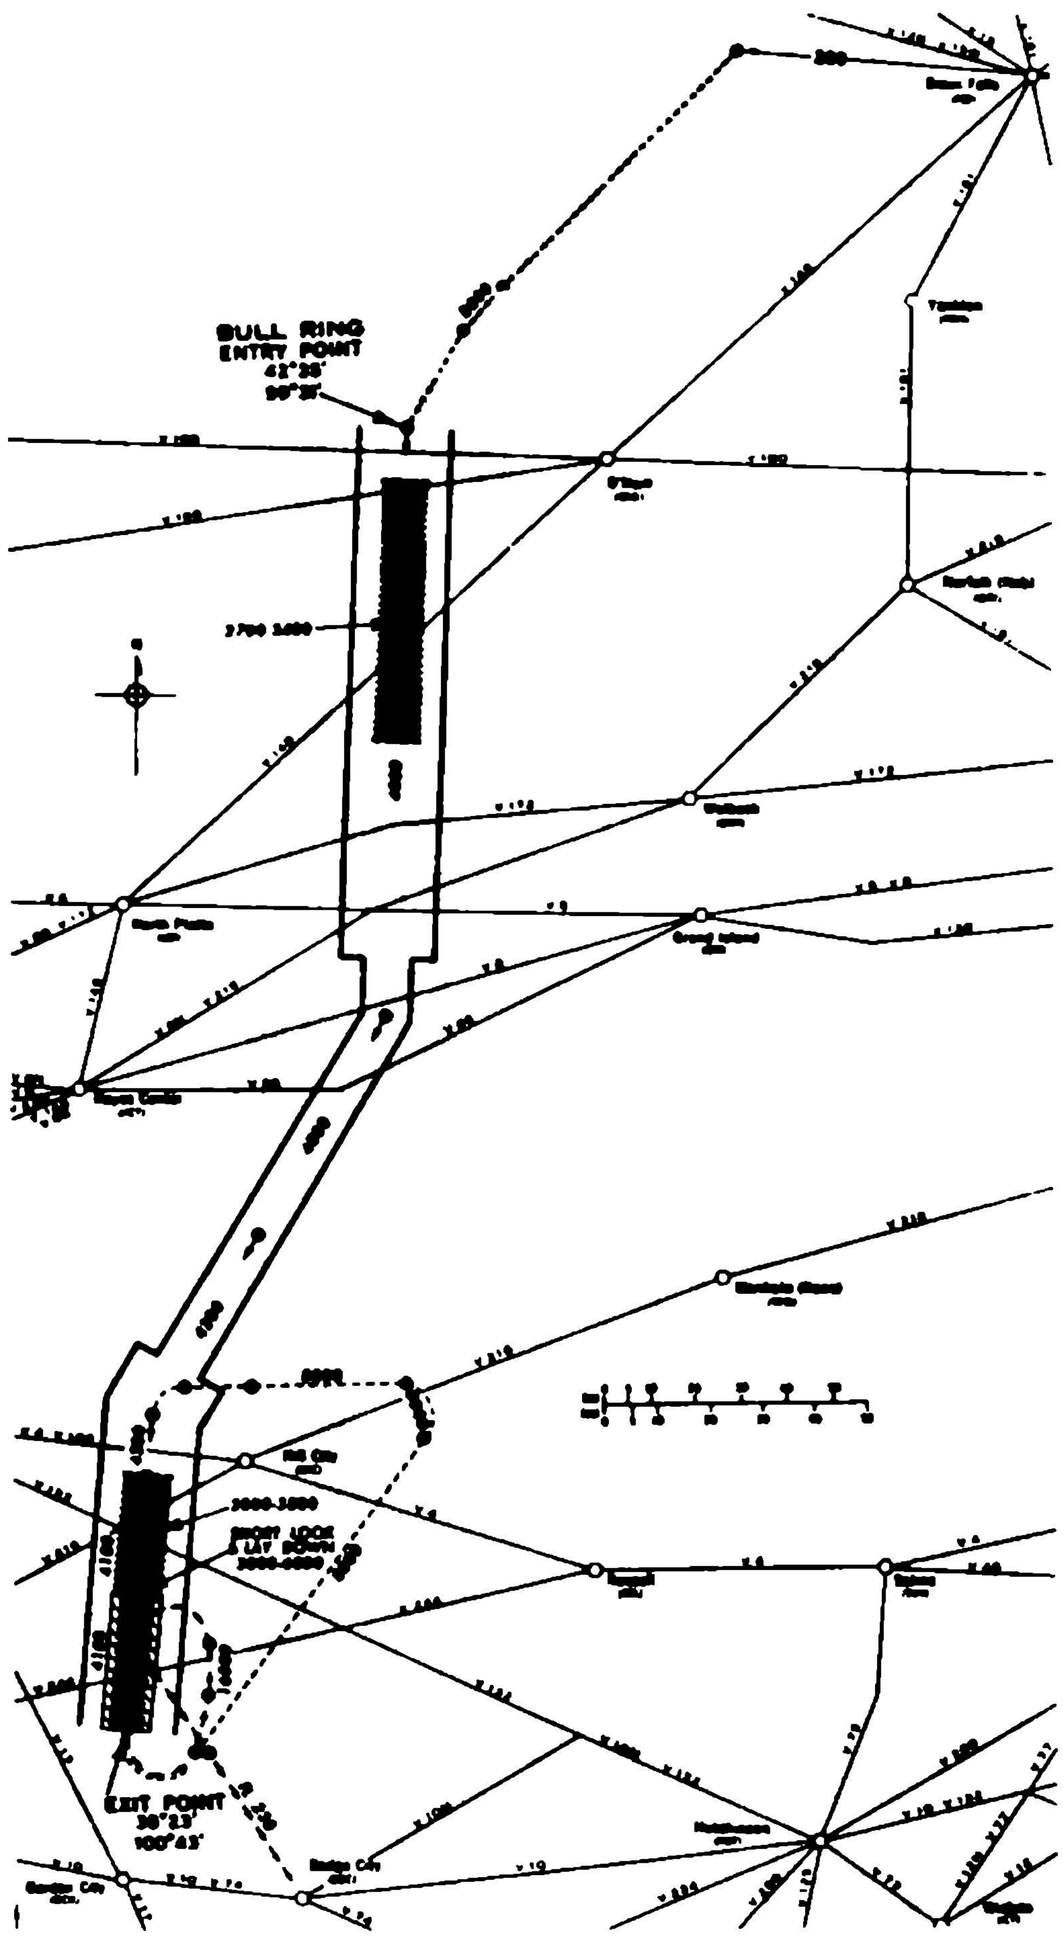
Hours of Operation—0100Z to 1400Z, 7 days per week.

KANSAS/NEBRASKA/SOUTH DAKOTA

BULL RING

Effective March 1 thru August 27, 1965

Aircraft shall cross the Sioux Falls VORTAC 269/55 (43°46'N, 98°02'W) at FL 290 or as assigned by ARTC:



VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 35°17'N, 92°51'W to 36°05'N, 92°53'W and from 36°38'N, 92°45'W to 37°30'N, 93°34'W. During daylight hours, some VFR operations will be flown 800' above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown is the minimum altitude that will be reached on each route segment during daylight hours.

then descend direct so as to cross 43°02′N, 99°06′W at 8,000′ MSL; then at 8,000′ MSL direct to 42°54′N, 99°-17′W; then descend direct so as to cross 42°35′N, 99°31′W at 4,000′ MSL (Low Level Entry Point); then at 4,000′ MSL direct to 40°41′N, 99°38′W; then at 4,000′ MSL direct to 40°00′N, 100°10′W; then at 4,200′ MSL direct to 39°26′N, 100°36′W; then at 4,200′ MSL direct to 39°-13′N, 100°37′W; then at 4,100′ MSL direct to the entry point of the bomb run corridor at 38°50′N, 100°40′W.

Short Look and Lay Down—After passing 38°50′N, 100°-40′W aircraft shall maintain between 3,000′ MSL and 6,000′ MSL through the bomb run corridor (5 SM either side of centerline from 38°50′N, 100°40′W to 38°23′N, 100°43′W), the minimum IFR altitude through the bomb run corridor is 4,100′ MSL. After exiting the route at 38°23′N, 100°43′W, aircraft shall turn left climbing to 38°20′N, 100°26′W; then continue climb direct so as to cross 38°31′N, 100°24′W at 16,000′ MSL; then at 16,000′ MSL direct 38°40′N, 100°23′W; then at 16,000′ MSL turn left to 38°41′N, 100°41′W; then climb direct to the Dodge City, Kansas, VOR crossing 38°19′N, 100°24′W at FL 230; then at FL 230 to the Dodge City VOR.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall after passing 38°23′N, 100°43′W, turn left and climb so as to cross 38°20′N, 100°26′W at 8,000′ MSL; then at 8,000′ MSL direct 39°21′N, 99°30′W; then at 8,000′ MSL turn left to 39°31′N, 99°34′W then at 8,000′ MSL direct 39°31′N, 100°12′W; then start descent direct so as to cross 39°31′N, 100°28′ at 4,200′ MSL; then turn left at 4,200′ MSL to 39°26′N, 100°36′W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000′; visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 42°25′N, 99°32′W to 41°35′N, 99°35′W and from 39°13′N, 100°37′W to 38°-23′N, 100°43′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude on the chart is the minimum altitude that will be reached during daylight hours.

Route Width—The route width is reduced to 5 SM on each side of centerline from 40°53′N, 99°38′W to 39°-35′N, 100°30′W.

Hours of Operation—24 hours daily, 7 days a week.

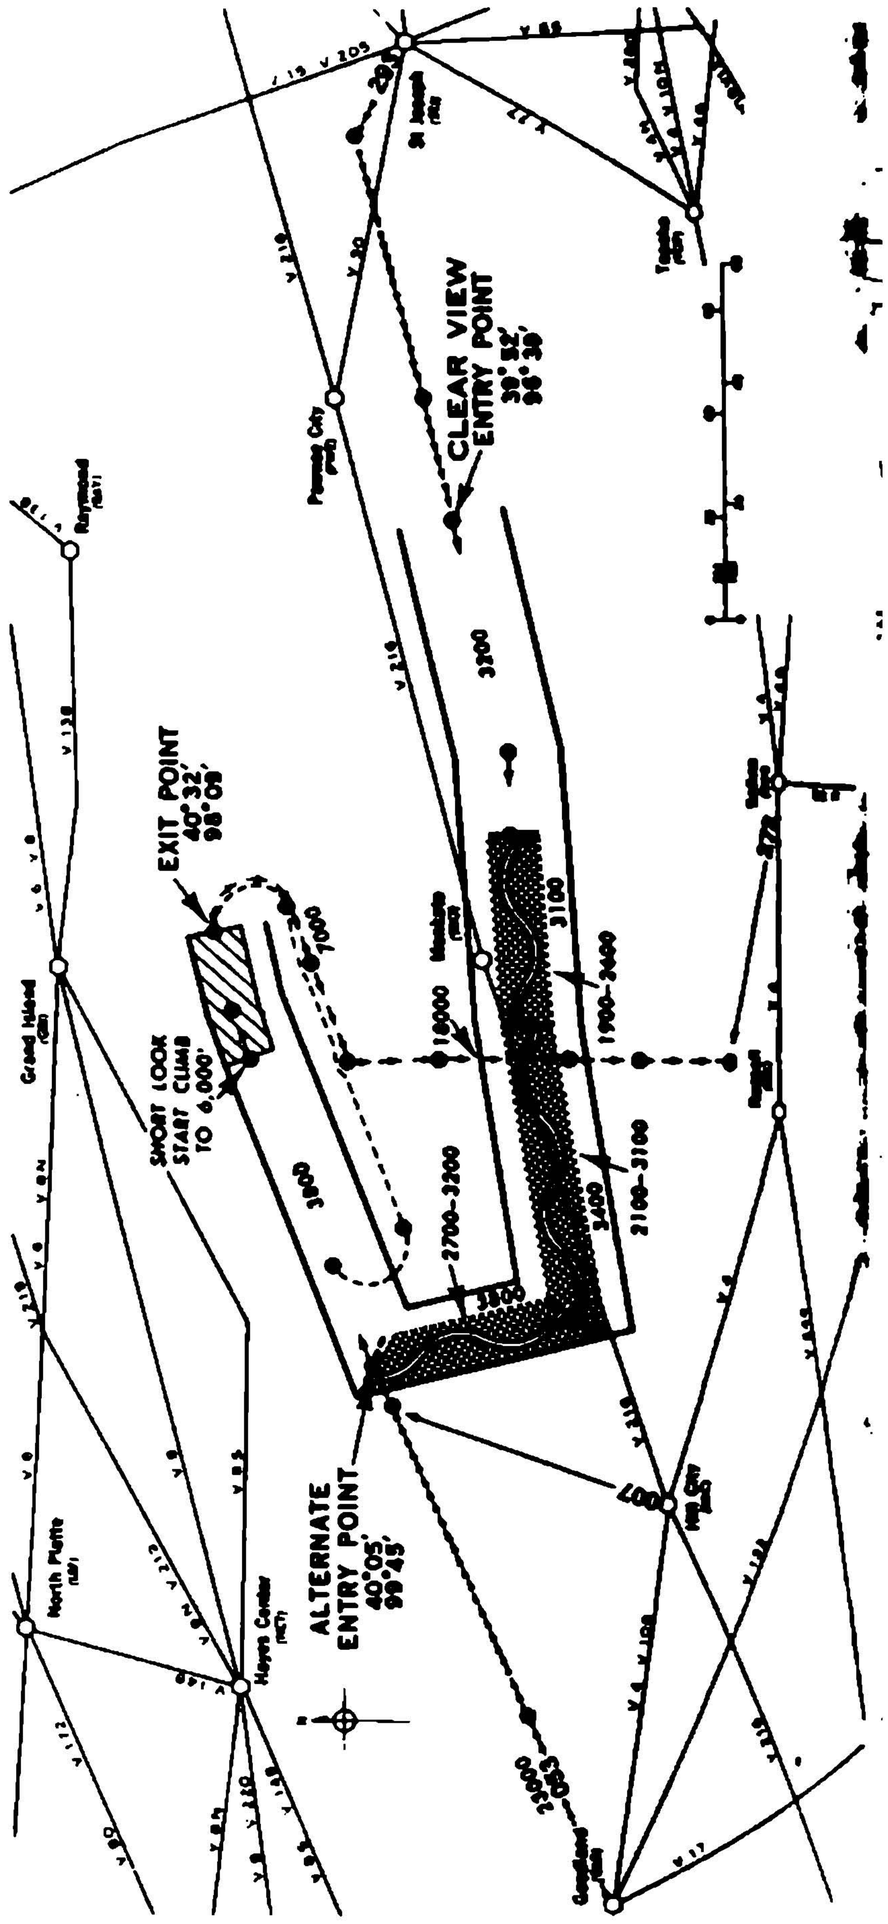
KANSAS/MISSOURI/NEBRASKA

CLEAR VIEW

Revised Effective December 24, 1964

Aircraft shall cross the St. Joseph, Mo. VOR at FL 240 or above, then proceed northwest on the St. Joseph VOR 293° radial, maintain FL 240 or above until 17 NM northwest of St. Joseph VOR; turn left direct 39°56′N, 96°12′W crossing this point at 9000′ MSL, descend to 3200′ MSL direct to the route entry point at 39°52′N, 96°39′W, maintain 3200′ MSL direct 39°43′N, 97°30′W, descend to 3100′ MSL direct 39°40′N, 98°30′W, climb to 3400′ MSL direct 39°31′N, 99°34′W, climb to 3800′ MSL direct 40°05′N, 99°45′W; maintain 3800′ MSL direct 40°26′N, 98°37′W.

Short Look—After passing 40°26′N, 98°37′W, proceed direct to 40°29′N, 98°27′W climbing so as to cross this point at 6000′ MSL; maintain 6000′ MSL through the bomb run corridor (5 SM either side centerline from 40°26′N, 98°37′W to 40°32′N, 98°09′W); after exiting the route at 40°32′N, 98°09′W, turn right climbing to cross 40°20′N, 98°03′W at 7000′ MSL; then at 7000′ MSL direct 40°16′N, 98°16′W; then start climb so as to cross 40°10′N, 98°37′W at or below 14,000′ MSL; then turn left climbing so as to cross 39°54′N, 98°37′W at FL 180; then at FL 180 direct 39°33′N, 98°37′W; then climb so as to cross 39°21′N, 98°37′W at or below FL 230, then start climb so as to cross the Salina VORTAC 272/48 at FL 250.



Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 40°32′N, 98°-09′W, turn right climbing to 7000′ MSL to 40°30′N 98°03′W, maintain 7000′ MSL direct 40°00′N, 99°14′W, turn right descending to 3800′ MSL to 40°12′N, 99°22′W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 39°42′N, 97°48′W to 40°05′N, 99°45′W. During daylight hours, some VFR operations will be flown 500′ above the immediate ter-

in. VFR operations conducted during the hours of rkness will not be flown lower than 800' above the rrain. The lower VFR altitude shown on the chart is e minimum altitude that will be reached on each route gment during daylight hours.

Alternate Entry—Aircraft shall cross the Goodland, Kans VOR at FL 230; and proceed northeast on the Goodland VOR 053° radial maintaining FL 230 until 35 NM rtheast of Goodland VOR, then descend so as to reach 0' MSL by the Hill City, Kansas VOR 007/49 NM fix; en descend to 3800' MSL direct 40°05'N, 99 45'W, nce via the published route.

Route Width—The route width from 39°31'N, 99 34'W the route exit point is 5 SM on the west and north le of the route centerline and 10 SM on the east and uth side of the route centerline.

Hours of Operation—0000Z to 2359Z Monday through turday.

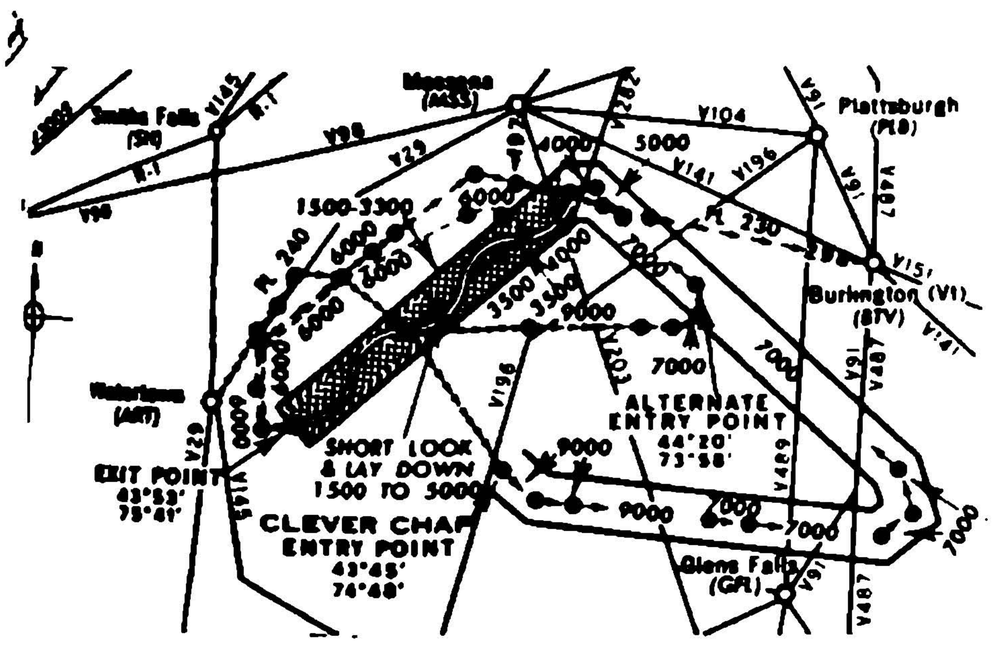
NEW YORK/VERMONT

CLEVER CHAP

Effective March 4, 1965

(Replaces Short Doll Route)

Aircraft shall cross 43°57'N, 76°04'W (Watertown, t. VOR) at FL 290; descend cross 44°11'N, 75°52'W FL 250 or above; cross 44°16'N, 75°47'W at FL 240; ect 44°22'N, 75°42'W; cross 44°22'N, 75°30'W at FL 0; cross 44°13'N, 75°12'W at 14,000' MSL; cross low eel entry point 43°45'N, 74°48'W at 9000' MSL; maintain 9000' direct 43°39'N, 74°39'W direct 43°38'N, 74°30' direct 43°35'N, 73°55'W descend to cross 43°34'N, 46'W at 7000' MSL maintain 7000' direct 43°31'N, 10'W left turn to 43°36'N, 73°01'W to 43°43'N, 73°05'W ect 44°33'N, 74°16'W descend to cross 44°37'N, 74°24'W 5000' cross 44°37'N, 74°30'W at 4000' maintain 4000' to 28'N, 74°44'W descend to cross 44°26'N, 74°47'W at 0' MSL; direct at 3500' MSL to enter bomb run corr at 44°15'N, 75°05'W.



Short Look and Lay Down—After passing 44°15'N, 75°05'W craft shall operate through bomb run corridor between 0' MSL and 5000' MSL. Minimum IFR altitude ough the bomb run corridor is 3500' MSL (the bomb corridor is 5 SM either side of centerline from 44°15' 75°05'W to 43°53'N, 75°41'W). After exiting the low el route at 43°53'N, 75°41'W aircraft shall turn right climb so as to cross 43°52'N, 75°48'W at 6000' MSL. intain 6000' MSL direct 44°00'N, 75°51'W; direct 10'N, 75°51'W, direct 44°27'N, 75°22'W; climb cross 44°30'N, 75°17'W at 13,000' MSL or below; cross 44°41'N, 74 58'W at 14,000' (Burlington, Vt. VOR 298 radial) cross 44 39'N, 74 45'W at 16,000' (Massena, N.Y. VOR 197 radial); cross 44°35'30"N, 74°21'W at FL 200; climb to cross 44°33'30"N, 74 09'W at FL 230, maintain FL 230 direct 44°24'N, 73°11'W (Burlington, Vt. VOR).

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43 53'N, 75 41'W; turn right and climb so as to cross 43 52'N, 75 48'W at 6000' MSL; maintain 6000' direct 44 00'N, 75 51'W; direct 44°10'N, 75 51'W direct 44°22'N, 75 30'W direct 44°34'N, 74°57'W at 6000' MSL; turn right to 44°34'N, 74°48'W descending to cross 44°26' N, 74°47'W at 3500' MSL, thence via the Clever Chap route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated between the following points: From 44 37'N, 74°30'W to 43°53'N, 75°41'W. During daylight hours some VFR operations will be flown 800' above the immediate terrain. The lower VFR altitude is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 290; descend, cross 44°11' N, 75 52'W at FL 250 or above; cross 44°16'N, 75°47'W at FL 240; direct 44 22'N, 75°42'W; cross 44°22'N, 75°30' W at FL 190. Cross 44°13'N, 75°12'W at 14,000' MSL; continue descend to cross 44°13'N, 74°41'W at 9000' MSL; maintain 9000' direct 44°13'N, 74°12'W; start descend, cross 44°13'N, 74 04'W at 7000' MSL; maintain 7000' MSL direct 44°20'N, 73 58'W, thence via the Clever Chap route.

Route Width—The entire low level route is reduced to 5 SM either side of centerline.

Hours of Operation—0000Z to 2359Z Monday through Sunday.

ALABAMA/MISSISSIPPI

• COIL SPRING

Revised Effective April 1, 1965

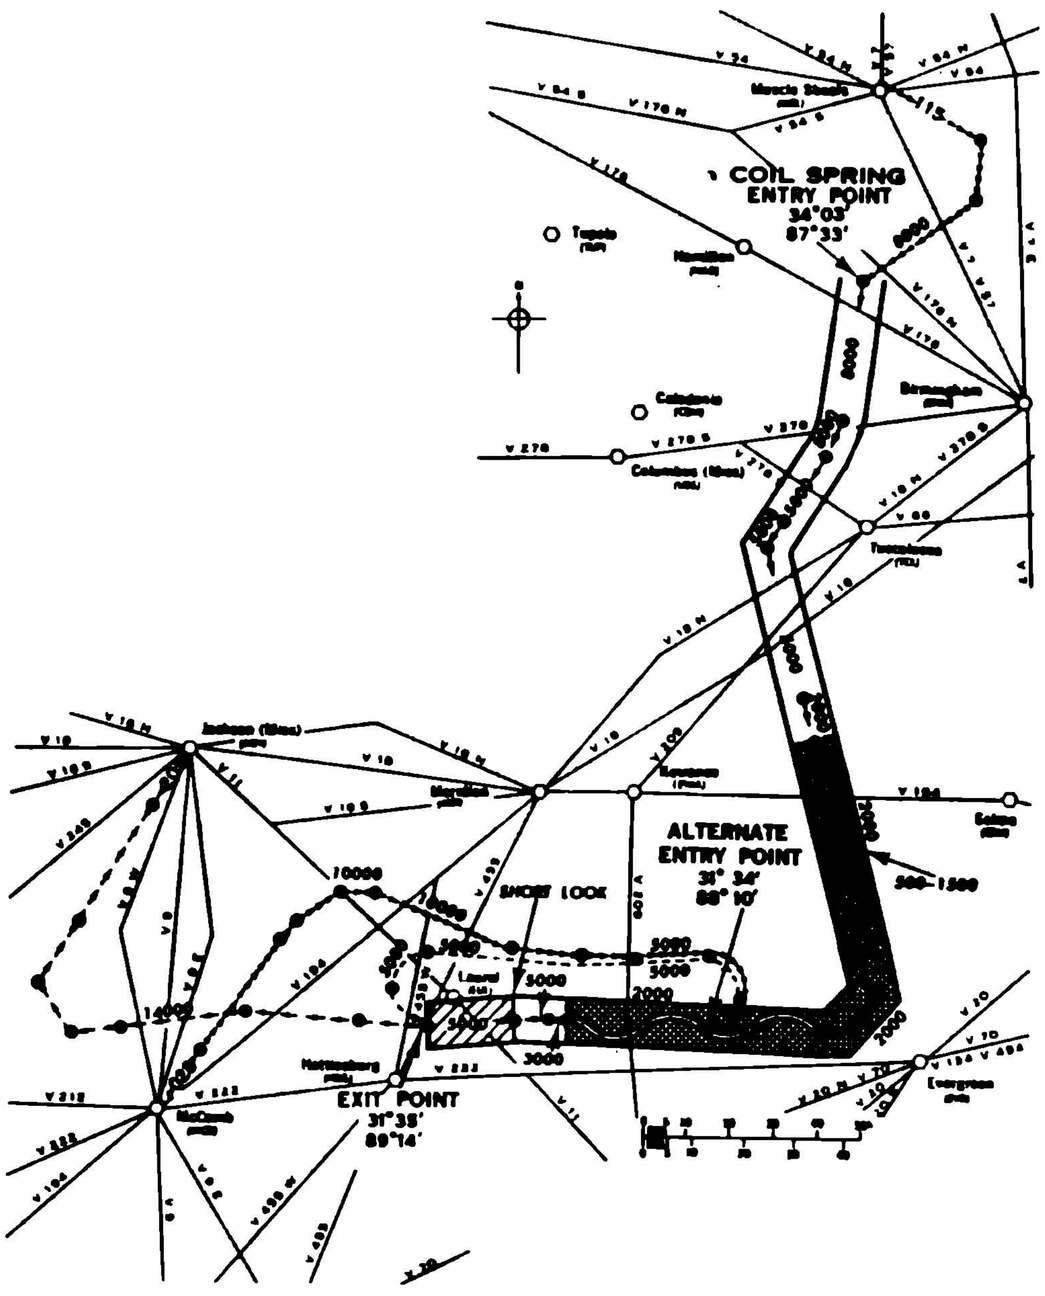
Aircraft shall cross Muscle Shoals, Alabama VOR at FL 200, or as assigned. Descend via Muscle Shoals VOR 115° radial, cross Muscle Shoals VOR 115°/24 NM at 12,000' MSL; turn right, descend to cross 34°19'N, 87°06'W at 8000' MSL, maintain 8000' MSL direct to the route entry point at 34°03'N, 87°33'W, direct 33°-35'N, 87°38'W, direct 33°28'N, 87°42'W; descend direct to cross 33°15'N, 87°52'W at 5000' MSL, maintain 5000' MSL direct 33°10'N, 87°56'W, direct 32°40'N, 87°48'W; descend to cross 32°31'N, 87°45'W at 2000' MSL, maintain 2000' MSL direct 31°41'N, 87°31'W, turn right to 31°33'N, 87°40'W, maintain 2000' MSL direct 31°36'N, 88°42'W; climb direct to cross 31°36'N, 88°46'W at 3000' MSL, direct to cross 31°36'N, 88°55'W at 5000' MSL. In addition to the above, aircraft may climb to 3000' MSL after 31°33'N, 87°40'W and maintain 3000' MSL to 31°36'N, 88°55'W during the hours 0600Z–1200Z.

Short Look—After passing 31°36'N, 88°55'W aircraft shall operate through the bomb run corridor at 5000' MSL. In addition, aircraft may operate through the bomb run corridor at 3000' MSL during the hours 0600Z–1200Z. (The bomb run corridor is 5 SM either side centerline from 31°36'N, 88°55'W to 31°35'N, 89°14'W.) After exiting the route at 31°35'N, 89°14'W, aircraft shall cross 31°36'N, 89°30'W at 5000' MSL; start climb direct to cross 31°37'N, 89°56'W at 14,000' MSL (reporting point), maintain 14,000' MSL direct 31°33'N,

90°25′W; start climb direct 31°32′N, 90°36′W, turn right to intercept Jackson, Miss. VORTAC 205° radial 56 NM fix (31°42′N, 90°44′W) at FL 200; maintain FL 200 via 205 radial to the 41 NM fix (31°55′N, 90°35′W); climb to cross the 16 NM fix at FL 250; maintain FL 250 (or flight level assigned) to Jackson VORTAC.

Re-Entry—Aircraft scheduled to execute an additional bomb run shall, after exiting the route at 31°35′N, 89°14′W, turn right, cross 31°42′N, 89°22′W at 5000′ MSL, maintain 5000′ MSL, turn right to 31°49′N, 89°-14′W, direct 31°48′N, 88°27′W; direct 31°48′N, 88°10′W; turn right, cross 31°40′N, 88°03′W at 3000′ MSL; continue turn, cross 31°34′N, 88°10′W at 2000′ MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 32°31′N, 87°-45′W to 31°36′N, 88°42′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum that will be reached on each segment during daylight hours.



Alternate Entry—Aircraft shall cross McComb, Miss. VOR (31°18′15″N, 90°15′29″W) at FL 230, or as assigned; maintain FL 230 or as assigned via the McComb VOR 028° radial to 13 NM fix; start descent, cross McComb VOR 028° radial 41 NM fix at 15,000′ MSL; cross 45 NM fix at 14,000′ MSL; turn right, cross 32°01′N, 89°35′W at 10,000′ MSL, maintain 10,000′ MSL, turn right, 32°01′N, 89°27′W, direct 31°49′N, 88°55′W; descend direct, cross 31°48′N, 88°39′W at 6000′ MSL; direct, cross 31°48′N, 88°27′W at 5000′ MSL, maintain 5000′ MSL direct 31°48′N, 88°10′W; turn right cross 31°40′N, 88°03′W at 3000′ MSL continue turn, cross 31°34′N, 88°10′W at 2000′ MSL; thence via the published route.

Route Width—The entire route is reduced to 5 SM either side of route centerline.

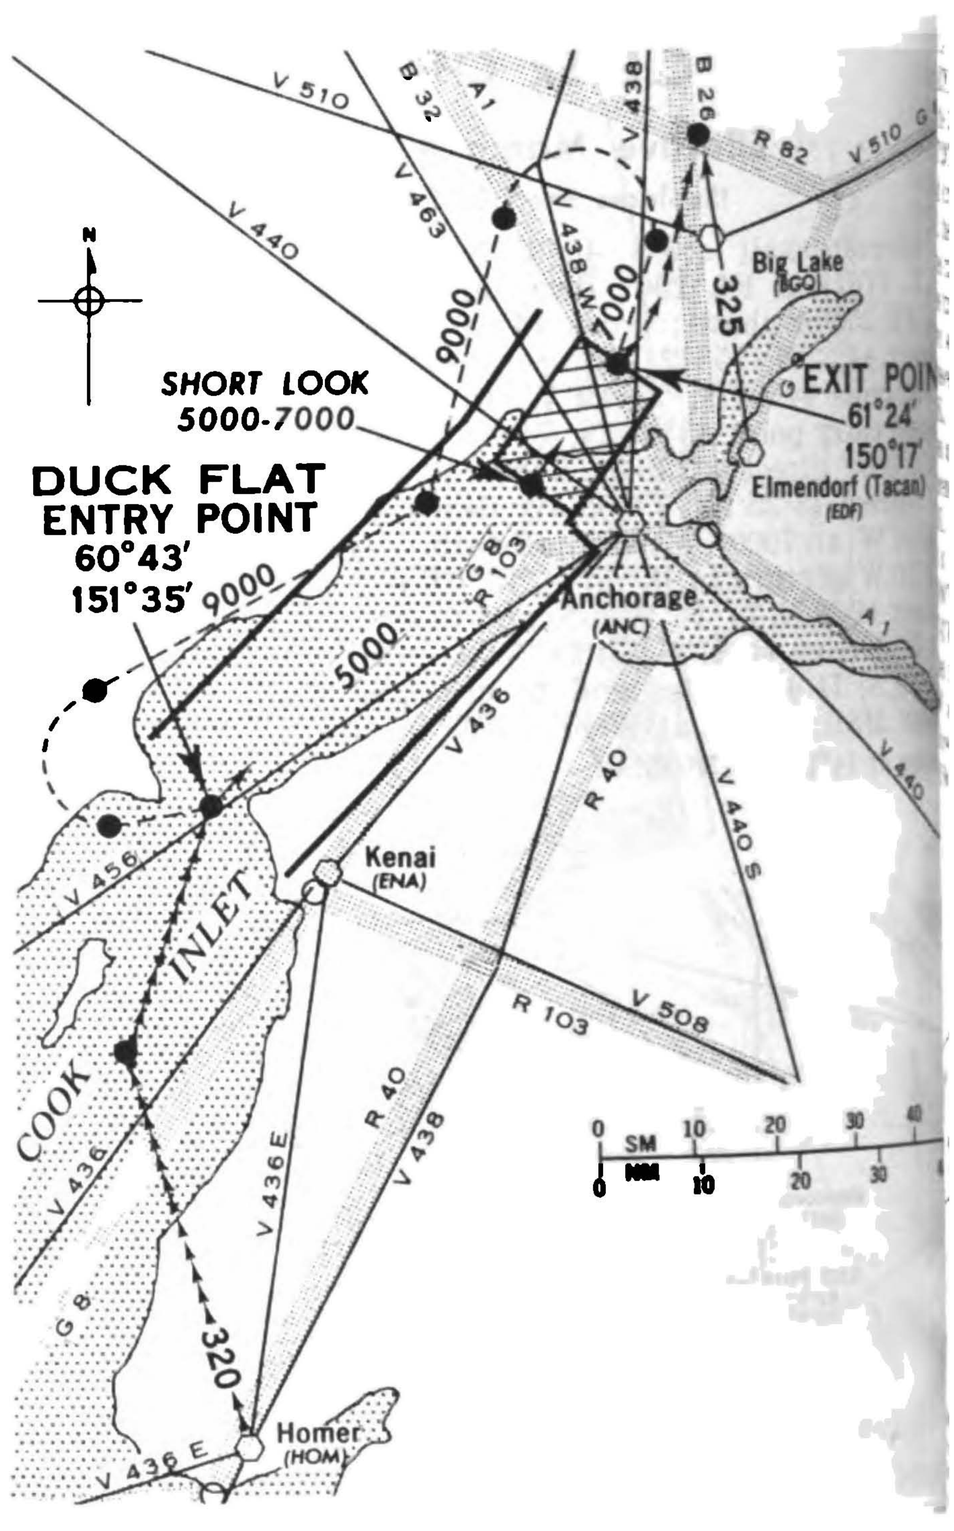
Hours of Operation—24 hours per day, 7 days a week.

DUCK FLAT

ALASKA

Effective June 16, 1963

Aircraft shall cross the Homer, Alaska VOR (reporting point) at FL 250 or as assigned by ARTCC, descend via the 320° radial of the Homer VOR to 60°20′N, 151°50′W continue descent to cross the route entry point at 60°43′N, 151°35′W at 5000′ MSL, maintain 5000′ MSL to 61°13′, 150°34′W.



Short Look—After passing 61°13′N, 150°34′W aircraft shall maintain between 5000′ MSL and 7000′ MSL through the bomb run corridor (5 smi either side centerline from 61°13′N, 150°34′W to 61°24′N, 150°17′W). After passing 61°24′N, 150°17′W (reporting point), the route exit point, aircraft shall climb to or maintain 7000′ MSL direct to the Elmendorf TACAN 325° radial 30 NM fix (Willow Intersection).

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 61°24′N, 150°17′W, main

n 7000' MSL to 61°35'N, 150°08'W, then turn left mbing to 9000' MSL direct to 61°38'N, 150°38'W, then 0' MSL to 61°13'N, 150°54'W, then 9000' MSL direct 53'N, 151°57'W, then a left descending turn to cross 41'N, 151°54'W at 7000' MSL or above, direct to re-y the Duck Flat route at 60°43'N, 151°35'W at 5000' SL.

oute Width—The route width is reduced to 5 smi southt of centerline from 61°13'N, 150°34'W to 61°24'N, °17'W.

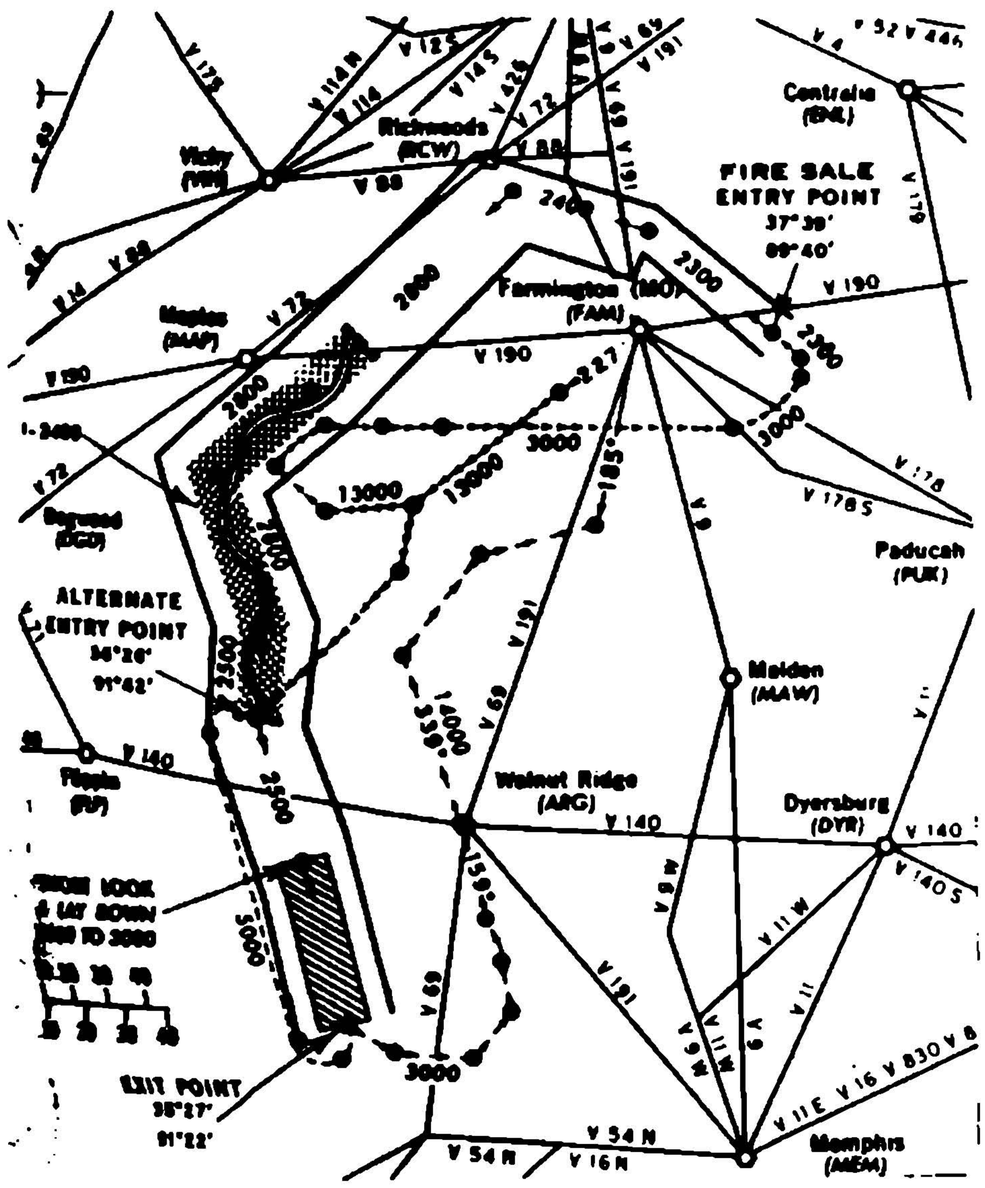
ours of Operation—2000Z to 2400Z Monday through day.

ARKANSAS/MISSOURI

FIRE SALE

Effective April 1 thru September 25, 1965

ircraft shall cross the Farmington, Missouri, VORC (37°40'24"N, 90°14'02"W) at FL 240, or as assed by ARTC; then at FL 240, or assigned altitude, ceed via the 227° radial of the Farmington VORTAC ct to 37°29'N, 90°33'W (227/18 NM DME FIX); n descend direct so as to cross 37°08'N, 91°07'W at 00' MSL; then at 13,000' MSL turn right to 37°07'N, 28'W; then turn right descending to 37°15'N, 91°38'W; n continue turn descending to 37°23'N, 91°28'W; then cend direct so as to cross 37°23'N, 91°13'W at 6000' L; then descend direct so as to cross 37°23'N, 91°00'W 3000' MSL, then at 3000' MSL direct to 37°22'N, 50'W; then at 3000' MSL turn left to 37°32'N, 89°34' then descend direct so as to cross 37°35'N, 89°34'W 300' MSL; then at 2300' MSL direct to the route y point at 37°39'N, 89°40'W; then at 2300' MSL ct to 38°00'N, 90°10'W; then at 2400' MSL direct to 8'N, 90°43'W; then at 2800' MSL direct to 37°30'N, 0'W; then at 2800' MSL direct to 37°13'N, 91°54'W; n at 2800' MSL direct to 36°45'N, 91°39'W; then at ' MSL direct to 36°26'N, 91°42'W; then at 2500' MSL ct to 36°00'N, 91°33'W.



Short Look and Lay Down—After passing 36°00'N, 91°-33'W, aircraft shall maintain between 2000' MSL and 3000' MSL through the bomb run corridor (5 SM either side of centerline from 36°00'N, 91°33'W to 35°27'N, 91°22'W). After exiting the route at 35°27'N, 91°22'W, aircraft shall turn left and climb so as to cross or maintain 3000' MSL to 35°23'N, 91°12'W; then at 3000' MSL to 35°22'N, 90°54'W; then start climb so as to intercept the 159° radial of the Walnut Ridge VOR (35°30'N, 90°45'W) at 7000' MSL; then climb via the inbound 159° radial of the Walnut Ridge VOR so as to cross the 28 NM fix (35°40'N, 90°48'W) at 11,000' MSL or above; then via the 159° radial climb so as to cross the 19 NM fix (35°48'N, 90°51'W) at 14,000' MSL; then at 14,000' MSL via the 159° radial inbound and the 339° radial outbound direct to the 33 NM fix (36°39'N, 91°08'W); then start climb so as to cross 36°58'N, 90°51'W at FL 200; then climb so as to cross 37°04'N, 90°23'W (FAM 185/37) at FL 250.

Ren-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run, shall after passing 35°27'N, 91°22'W, turn right and climb so as to cross or maintain 3000' MSL to 35°21'N, 91°24'W; continue turn and climb so as to cross 35°24'N, 91°34'W at 5000' MSL; then at 5000' MSL direct 36°24'N, 91°54'W; then turn right descending so as to cross 36°26'N, 91°42'W at 2500' MSL; thence via the published route .

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 37°40'N, 91°18'W to 36°26'N, 91°42'W. During daylight hours some VFR operations will be flown 500' above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached during daylight hours.

Alternate Entry—Aircraft shall cross the Farmington, Missouri, VORTAC at FL 240, or as assigned by ARTC; maintain FL 240, or assigned altitude, via the Farmington VORTAC 227° radial to the 18 NM DME fix (37°29'N, 90°33'W); then descend direct so as to cross 37°08'N, 91°07'W at 13,000' MSL; then at 13,000' MSL turn left to 36°55'N, 91°08'W; then right turn descending so as to cross 36°26'N, 91°42'W at 2500' MSL; thence via the published route.

Route Width—The route width is reduced to 5 SM on both sides of the centerline from 37°39'N, 89°40'W to 38°00'N, 90°10'W, and on the north side of centerline from 38°00'N, 90°10'W, to 38°08'N, 90°43'W.

Hours of Operation—24 hours daily, 7 days per week.

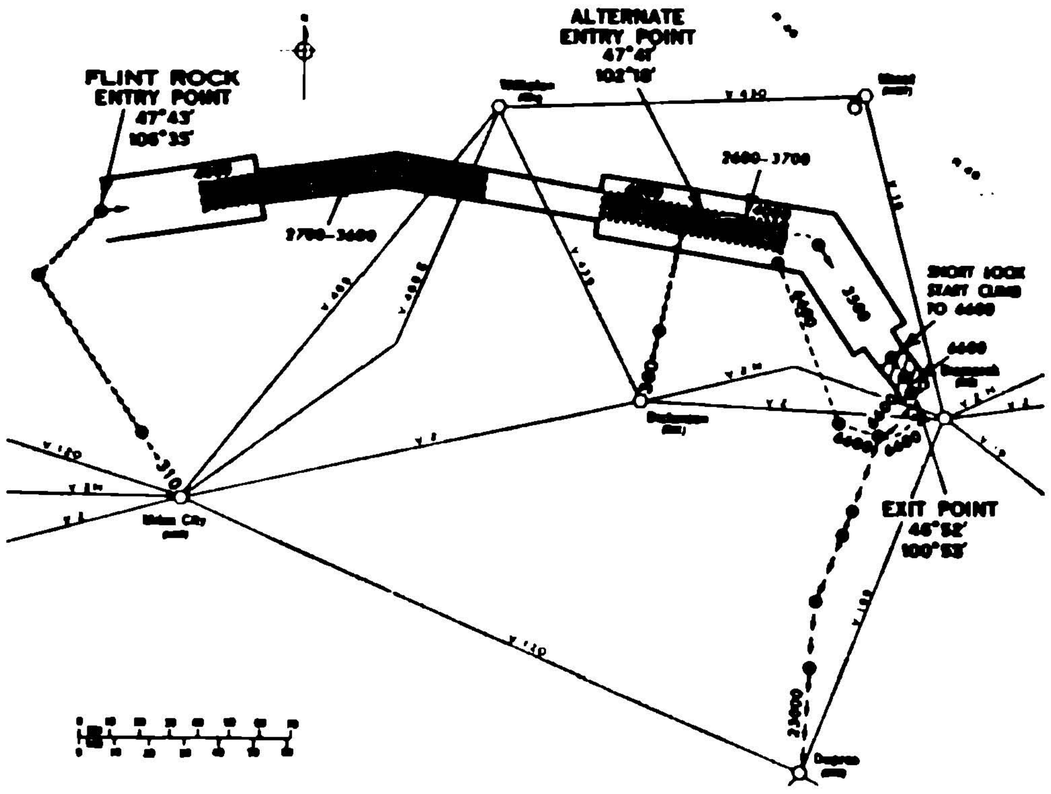
FLINT ROCK

MONTANA/NORTH DAKOTA

Revised Effective June 14, 1964

Aircraft shall cross the Miles City, Montana VORTAC (reporting point) at FL 230, or as assigned by ARTCC, and proceed via the 310° radial, maintaining FL 230 or as assigned, to 46°40'N, 106°14'W; then descend to cross 47°24'N, 107°00'W at or above 6000' MSL; then continue descent so as to cross the route entry point, 47°43'N, 106°35'W, at 4000' MSL; then at 4000' MSL direct 47°57'N, 104°30'W; then at 4000' MSL direct 47°35'N, 101°31'W; then descend to 3500' MSL direct 47°02'N, 101°02'W.

Short Look—After passing 47°02′N, 101°02′W aircraft shall climb so as to cross 46°56′N, 100°56′W at 6600′ MSL; then at 6600′ MSL direct to the exit point 46°52′N, 100°53′W (bomb run corridor 5 SM either side of centerline from 47°02′N, 101°02′W to the exit point 46°52′N, 100°53′W); then maintaining 6600′ MSL turn right direct 46°39′N, 101°07′W; then start climb to FL 230 direct to 45°53′N, 101°35′W; direct to Dupree VORTAC, climbing so as to cross 46°19′N, 101°19′W at or above 11,000′ MSL, crossing 46°13′N, 101°23′W at or below FL 190; crossing 45°53′N, 101°35′W at FL 210, and to reach FL 230 at a point 30 nautical miles northeast of the Dupree VORTAC.



Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an aditional Short Look bomb run shall, after passing 46°52′N, 100°53′W maintain 6600′ MSL direct 46°39′N, 101°07′W; then at 6600′ MSL make a right turn direct to 46°43′N, 101°24′W: then at 6600′ MSL direct 47°30′N, 101°49′W: then a right decending turn so as to reenter the route at 47°-35′N, 101°31′W at 3500′ MSL, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 47°48′N, 105°53′W to 47°53′N, 103°53′W and from 47°47′N, 103°03′W to 47°37′N, 101°45′W. During daylight hours some VFR operations will be flown 800′ above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Dickinson, No. Dakota VORTAC (reporting point) at 15,000′ MSL, or as assigned by ARTCC; then proceed via the 360° radial of Dickinson VORTAC at 15,000′ MSL, or assigned flight level/altitude, direct to a point 20 NM north of the Dickinson VORTAC; then descend so as to cross 47°42′-30′′N, 102°27′W at 6000′ MSL; then a descending right turn so as to cross 47°41′N, 102°18′W at 4000′ MSL, thence via the published route.

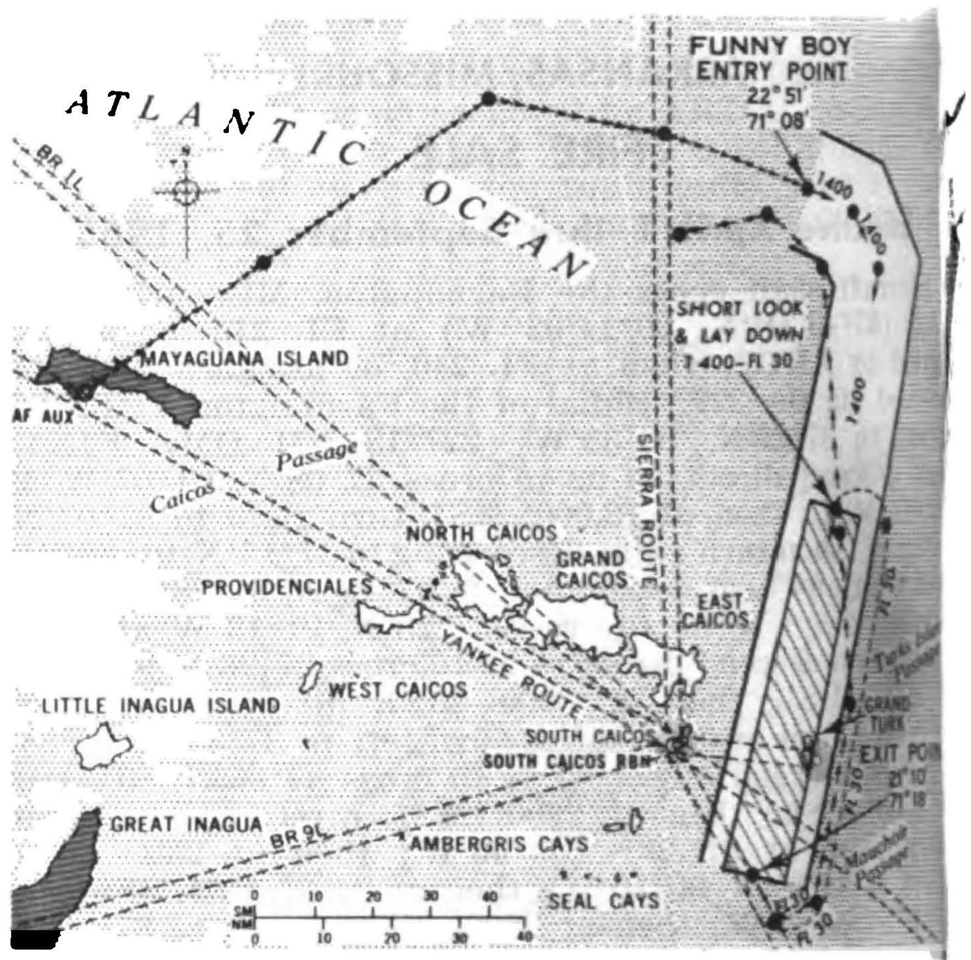
Route Width—The route width is reduced to 5 SM on either side of centerline from 47°50′N, 105°30′W to 47°-47′N, 103°03′W and from 47°07′N, 101°06′W to 46°52′N, 100°53′W.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

FUNNY BOY

Revised Effective March 4, 1965

Aircraft shall cross 22°23′N, 73°02′W (Mayagua AFB) at FL 270 or as assigned; maintain FL 270 or assigned 22°41′N, 72°35′W (reporting point); start scent, cross 23°05′N, 72°00′W at FL 150; right tu cross 23°00′N, 71°33′W at FL 90 or below; cross 22°51′ 71°08′W at 1400′ MSL (the route entry point); maint 1400′ MSL direct 22°48′N, 70°58′W; turn right 22°39′N, 70°53′W; direct 22°04′N, 71°03′W.



Short Look and Lay Down—After passing 22°04′N, 7 03′W, aircraft shall maintain between 1400′ and FL through the bomb run corridor (5 SM either side of c terline from 22°04′N, 71°03′W to 21°10′N, 71°18′W After exiting the route at 21°10′N, 71°18′W, aircra shall turn left, cross 21°03′N, 71°14′W at FL 30; ma tain FL 30 to 21°06′N, 71°08′W, direct 21°35′N, 71°00′ start climb, cross 22°00′N, 71°02′W at FL 110 or abo cross 22°40′N, 71°06′W at FL 250 or above; left turn 22°48′N, 71°16′W; cross 22°45′N, 71°30′W at FL 290 as assigned.

Re-Entry—After completing the initial bomb run, craft scheduled to execute an additional bomb run sh after exiting the low level route at 21°10′N, 71°18′ turn left cross 21°03′N, 71°14′W at FL 30; maintain 30 to 21°06′N, 71°08′W; direct 22°01′N, 70°53′W; t left descend to cross 22°04′N, 71°03′W at 1400′; the via the published route.

Hours of Operation—0000Z to 2359Z Monday thro Saturday.

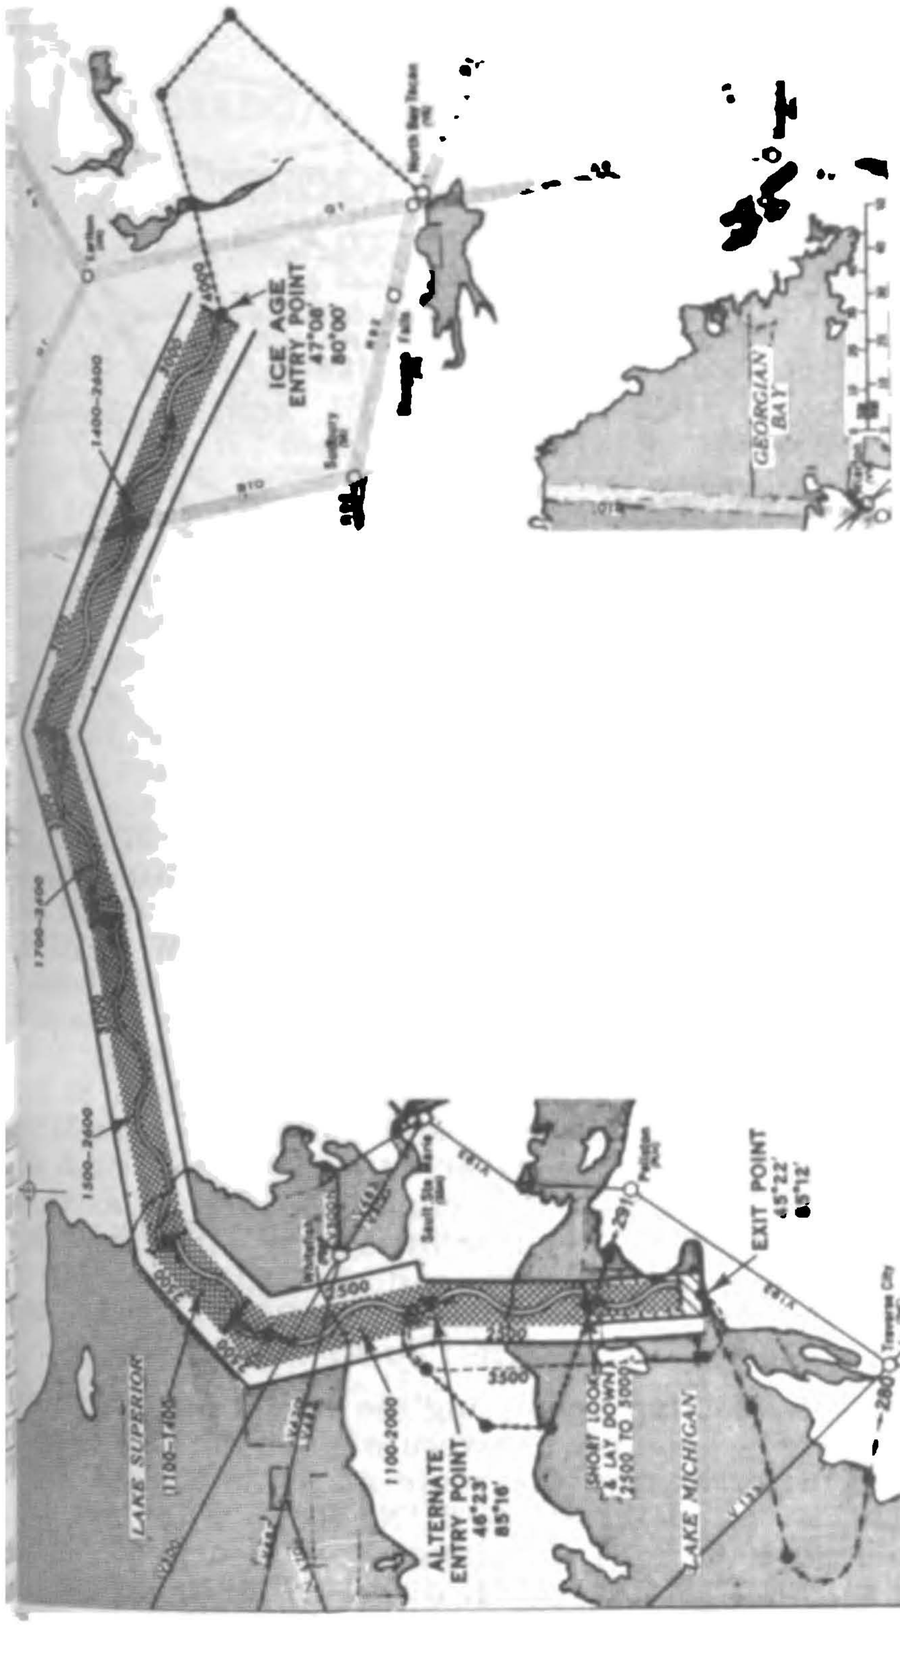
MICHIGAN/ONTARIO, CAN.

ICE AGE

Revised Effective September 6, 1964

Start descent over North Bay Ont. TACAN from 250 or as otherwise assigned to 17,000′ MSL direct 04′N, 78°25′W, descend to 10,000′ MSL direct to 47° 78°49′W, descend to 4000′ MSL direct to 47°15′N, 25′W, maintain 4000′ MSL direct to low level entry po at 47°08′N, 80°00′W (aircraft shall maintain an altit below 3500′ AGL on the low level route while in Ca

an airspace), descend so as to cross 47°22′N, 80°35′W 3000′ MSL, then maintain 3000′ MSL direct 47°58′N, °15′W, then at 3000′ MSL direct to 47°40′N, 83°16′W, en at 3000′ MSL direct 47°23′N, 85°00′W, then de- end direct 47°06′N, 85°22′W at 2500′ MSL (termina- n of Canadian portion of route). Aircraft shall enter e U.S.A. at 47°06′N, 85°22′W at 2500′ MSL, direct °00′N, 85°30′W at 2500′ MSL, direct 46°23′N, 85°16′W 2500′ MSL, direct 45°48′N, 85°15′W at 2500′ MSL.



Short Look and Lay Down—After passing 45°48′N, 85°- W aircraft shall maintain between 2500′ MSL and 0′ MSL through the bomb run corridor (5 SM either e of centerline from 45°48′N, 85°15′W to 45°22′N, 12′W. The minimum IFR altitude through the bomb corridor is 2500′ MSL); after passing 45°22′N, 85°- W then turn right climbing so as to cross 45°10′N, 47′W at 10,000′ MSL; then climb direct so as to cross 01′N, 86°33′W at 12,000′ MSL. Turn left to intercept ° radial of the Traverse City VOR climbing so as to ss Traverse City VOR 280/25 at FL 210. Continue mbing via the Traverse City VOR 280° radial so as to ss the Traverse City VOR at FL 250.

e-Entry—After completing the initial bomb run, air- ft that are scheduled to execute an additional bomb shall, after exiting the route at 45°22′N, 85°12′W n right climbing so as to cross 45°21′N, 85°32′W at 00′ MSL, then at 3,500′ MSL direct to 46°23′N, 85°- 37′W; then turn right descending so as to cross 46°23′N, 85°16′W at 2500′ MSL; thence via the "Ice Age" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 47°08′N, 80°00′W to 45°27′N, 85°13′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Pellston, Michigan VOR at FL 200, or as asigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30′′N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ice Age" route.

Route Width—The route width is reduced to 5 statute miles east of centerline from 46°23′N, 85°16′W to 45°- 22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

NEVADA

• LITTLE SATIN

Revised Effective April 5, 1965

Aircraft shall cross 41°40′N, 115°49′W (Elko VOR-TAC 340°/55 NM DME fix) (reporting point) at FL 230 or as assigned by ARTCC; then descend direct to cross the route entry point, 40°59′N, 116°30′W (Battle Mountain VOR 019°/31) at 14,000′ MSL, then 14,000′ MSL direct 40°10′N, 116°17′W; then descend to 13,000′ MSL direct 39°42′N, 116°10′W, then 13,000′ MSL direct 38°57′N, 116°26′W, then 13,000′ MSL direct 38°34′N, 116°40′W, then 13,000′ MSL direct 38°31′N, 118°12′W.

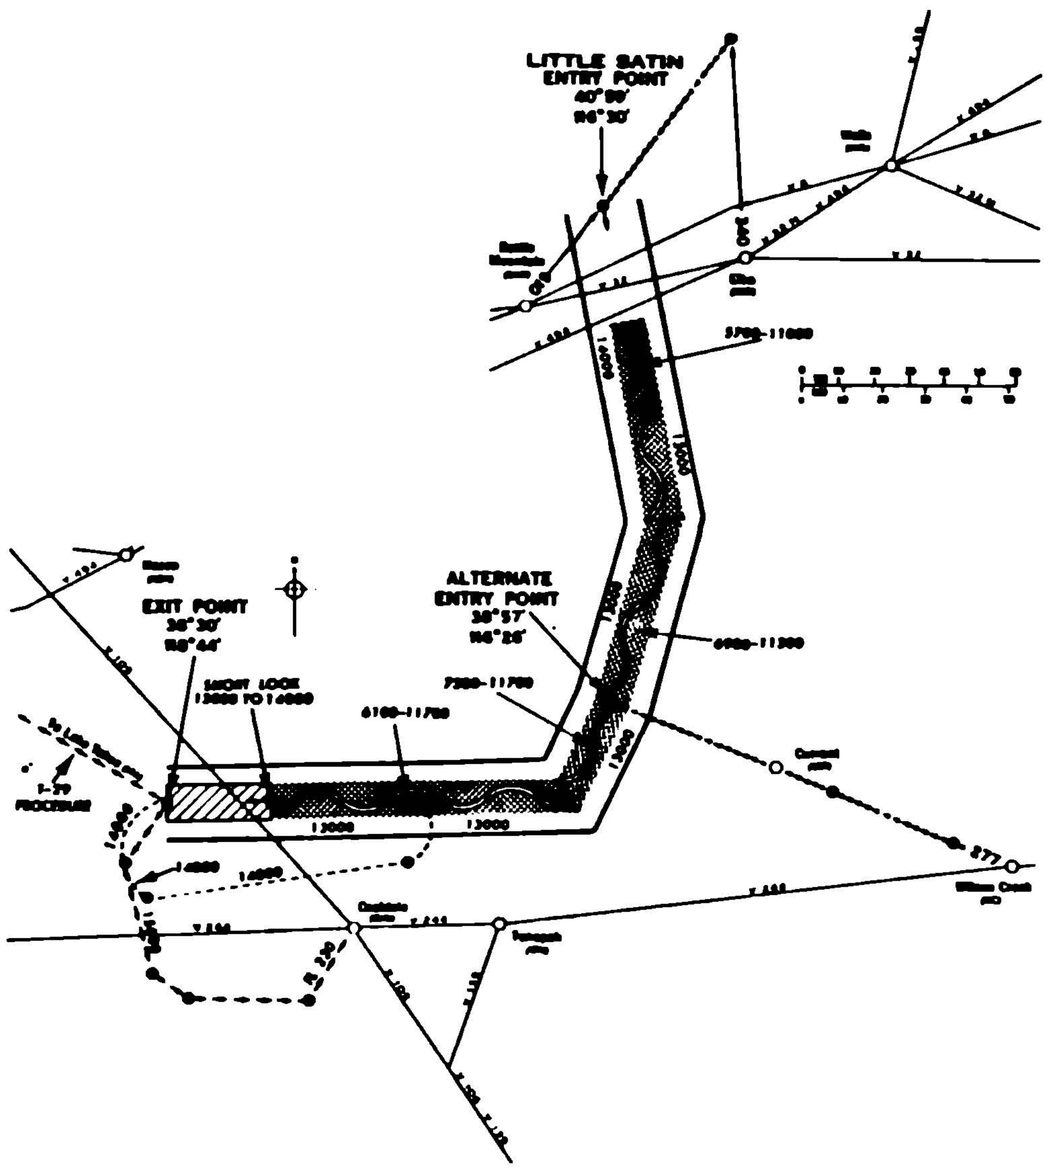
Short Look—After passing 38°31′N, 118°12′W aircraft shall operate between a maximum altitude of 14,000′ MSL and a minimum of 13,000′ MSL thru the bomb run corridor (5 SM either side of centerline from 38°31′N, 118°12′ W to 38°30′ N, 118°44′ W). After exiting the route at 38°30′N, 118°44′W aircraft shall start climb to cross 38°15′N, 118°57′W at 15,000′ MSL; then maintain 15,000′ MSL direct 37°48′N, 118°48′W; then climb so as to cross 37°42′N, 118°36′W at or above 17,000′ MSL; then climb direct to cross 37°42′N, 118°00′W at FL 230; then direct to the Coaldale, Nev. VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°30′N, 118°44′W, maintain 14,000′ MSL direct 38°15′N, 118°57′W, then 14,000′ direct 38°06′N, 118°50′W direct 38°17′N, 117°30′W; then descend direct to cross 38°32′N, 117°35′W at 13,000′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′ visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 40°30′N, 116°22′W to 38°31′N, 118°12′W. During daylight hours some VFR

operations will be flown 800′ above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Wilson Creek, Nevada VOR (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned flight level via the Wilson Creek VOR 277° radial until 15 NM northwest of the Wilson Creek VOR (38°21′N, 114°41′W); then descend direct to cross 38°34′N, 115°18′W at or below 15,000′ MSL; then descend direct via the Currant, Nev. VOR to cross 38°57′N, 116°26′W at 13,000′ MSL, thence via the published route.



I–29 Procedure—Aircraft shall cross Wilson Creek, Nevada, VOR (38°15′N, 114°23′W) (reporting point) as assigned by the ARTCC; then proceed via alternate entry route to 38°30′N, 118°44′W exit point of the bomb run corridor; then climb to 14,000′ MSL or as assigned by the ARTCC direct Lake Tahoe, California, VOR (39°11′ N, 120°16′W).

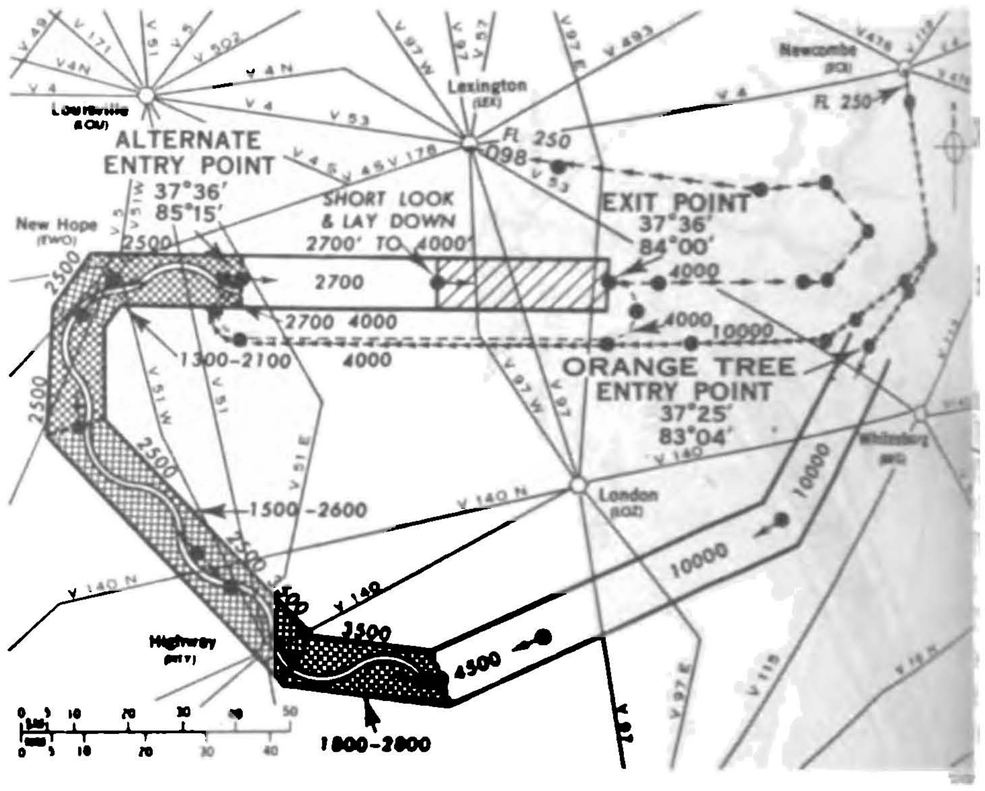
Hours of Operation—24 hours daily, 7 days a week.

KENTUCKY/TENNESSEE

ORANGE TREE

Revised Effective November 1, 1964

Aircraft shall cross the Newcomb, Kentucky VOR at FL 250; maintain FL 250 direct 38°05′N, 82°53′W; then start descend so as to cross 37°41′N, 82°48′W at 17,000′ MSL; cross 37°34′N, 82°55′W at 14,000′ MSL; then continue descent so as to cross the route entry point at 37°25′N, 83°04′W at 10,000′ MSL, then at 10,000′ MSL direct 36°57′N, 83°25′W, then at 10,000′ MSL direct 36°38′N, 84°13′W; then start descent so as to cross 36°-31′N, 84°33′W at 4500′ MSL; then descend so as to cross 36°31′N, 84°36′W at 3500′ MSL, then at 3500′ MSL direct 36°34′N, 84°03′W, then at 3500′ MSL direct 36°46′N, 85°16′W; then descend so as to cross 36°51′N, 85°27′W at 2500′ MSL, then at 2500′ MSL direct 37°11′N, 85°47′W, then at 2500′ MSL direct 37°30′N, 85°46′W, then at 2500′ MSL turn right to 37°35′N, 85°42′W, then at 2500′ MSL direct 37°36′N, 85°17′W; then climb so as to cross 37°36′N, 85°15′W at 2700′ MSL, then at 2700′ MSL direct to 37°36′N, 84°35′W.



Short Look and Lay Down—After passing 37°36′N, 84° 35′W aircraft shall maintain between 2700′ MSL and 4000′ MSL through the bomb run corridor (5 SM either side of centerline from 37°36′N, 84°35′W to 37°36′N, 84°00′W; the minimum IFR altitude thru the bomb run corridor is 2700′ MSL). After exiting the route at 37°-36′N, 84°00′W aircraft shall cross 37°36′N, 83°50′W at 4000′ MSL; then at 4000′ MSL direct 37°36′N, 83°20′W, then start climb direct 37°36′N, 83°15′W; cross 37°47′N, 83°05′W at or below 9000′ MSL; continue climb direct 37°52′N, 83°15′W; then climbing direct so as to cross 37°51′N, 83°30′W at or below 17,000′ MSL; then via the Lexington VORTAC 098° radial climbing so as to cross 37°56′N, 84°11′W (Lexington VORTAC 098/14) at FL 250, then at FL 250 direct to Lexington VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°36′N, 84°00′W, turn right so as to cross 37°31′N, 83°55′W at 4000′ MSL, then at 4000′ MSL continue right turn to 37°26′N, 84°-00′W, then at 4000′ MSL direct 37°26′N, 85°15′W; then turn right descending so as to cross 37°31′N, 85°20′W at 2700′ MSL, then at 2700′ MSL continue right turn to 37°36′N, 85°15′W, thence via the "ORANGE TREE" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′ visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 36°31′N, 84°33′W to 37°36′N, 85°15′W. During daylight hours some VFR operations will be flown 800′ above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Newcomb, KY VOR at FL 250, then at FL 250 direct 38°05′N, 82°53′W, then start descent so as to cross 37°41′N, 82°48′W at 17,000′ MSL; cross 37°35′N, 82°56′W at 14,000′ MSL; cross 37°29′N, 83°08′W at 10,000′ MSL; then at 10,000

SL direct 37°26′N, 83°15′W; direct 37°26′N, 83°42′W; en start descent so as to cross 37°26′N, 84°00′W at 00′ MSL; then at 4000′ MSL direct to 37°26′N, 85°-′W; then turn right descending so as to cross 37 31′N, °20′W at 2700′ MSL; then at 2700′ MSL direct to °36′N, 85°15′W; thence via the established route.

Route Width—The route width is reduced to 5 statute les on either side of centerline throughout the entire ute.

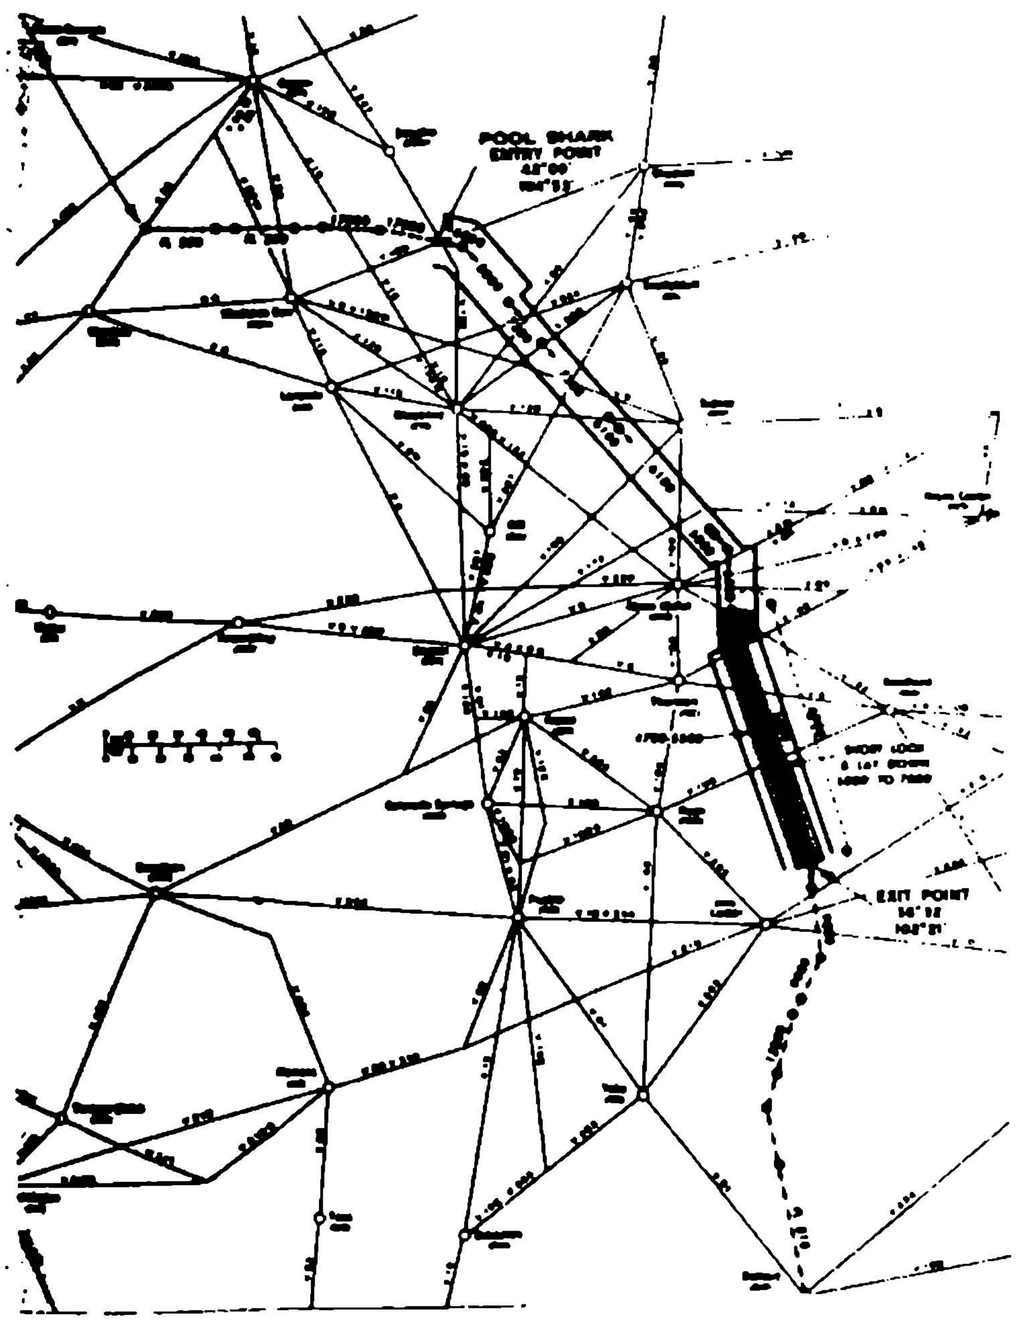
Hours of Operation—0000Z to 2400Z, 7 days weekly.

COLORADO/NEBRASKA/WYOMING

•POOL SHARK

Revised Effective March 18, 1965 through June 26, 1965

Aircraft shall cross 42°14′N, 107°07′W (Boysen Reser-L, Wyo. VORTAC 130/90) at FL 220; then direct °14′N, 106°35′W; then descend direct to cross 42°14′N, °26′W at FL 200; then maintain FL 200 direct 42°-′N, 105°59′W; then descend direct to cross 42 14′N, °46′W at 17,000′ MSL; then maintain 17,000′ MSL ect 42°13′N, 105°20′W, then maintain 17,000′ MSL ect to the route entry point at 42°09′N, 104°53′W, n descend direct to cross 42°07′N, 104°42′W at 16,000′ SL; then descend direct to cross 41°47′N, 104°22′W at 0′ MSL; then descend direct to cross 41°33′N, 104°-W at 7300′ MSL; then direct 41°07′N, 103°39′W; n descend direct to cross 41°03′N, 103°35′W at 6100′ SL; then 6100′ MSL direct to 40°27′N, 102°57′W then scend direct so as to cross 40°25′N, 102°55′W at 5800′ MSL then at 5800′ MSL direct to 40°20′N, 102°49′W; then 5800′ MSL direct 39°47′N, 102°49′W; then 5800′ MSL direct 39°05′N, 102°33′W.



Short Look and Lay Down—After passing 39°05′N, 102°-33′W, aircraft shall maintain between 5800′ MSL and 7000′ MSL through the bomb run corridor (5 SM either side of centerline from 39°05′N, 102°33′W to 38°32′N, 102°21′W). After exiting the route at 38°32′N, 102°-21′W; aircraft shall climb direct to cross 38°24′N, 102°-20′W at 9000′ MSL; then maintain 9000′ MSL direct 37°59′N, 102°18′W; then 9000′ MSL direct 37°45′N, 102°27′W; then climb direct to cross 37°40′N, 102°31′W at 12,000′ MSL; then 12,000′ MSL direct 37°20′N, 102°-39′W; then climb direct to cross 37°09′N, 102°44′W at or above 16,000′ MSL; then climb direct to cross 36°-49′N, 102°40′W at FL 210; then maintain FL 210 direct to Dalhart, Texas, VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°32′N, 102°21′W, turn left to cross 38°35′N, 102°04′W at 6000′ MSL; then 6000′ MSL direct to 40°00′N, 102°31′W; then turn left to cross 40°00′N, 102°49′W at 5800′ MSL, thence via the published route.

Alternate Entry—None.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart bewteen the following points 40°00′N, 102°49′W to 38°-32′N, 102°21′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown is the minimum altitude that will be reached on each route segment during daylight hours.

Route Width—The route width is reduced to 5 SM on the NE side of the centerline from 41°47′N, 104°22′W to 40°20′N, 102°49′W, and to 5 SM on the west side of centerline from 40°20′N, 102°49′W to 39°47′N, 102°49′W.

Hours of Operation—24 hours daily, 7 days per week.

TEXAS

•SEA HORSE

Revised Effective April 1, 1965

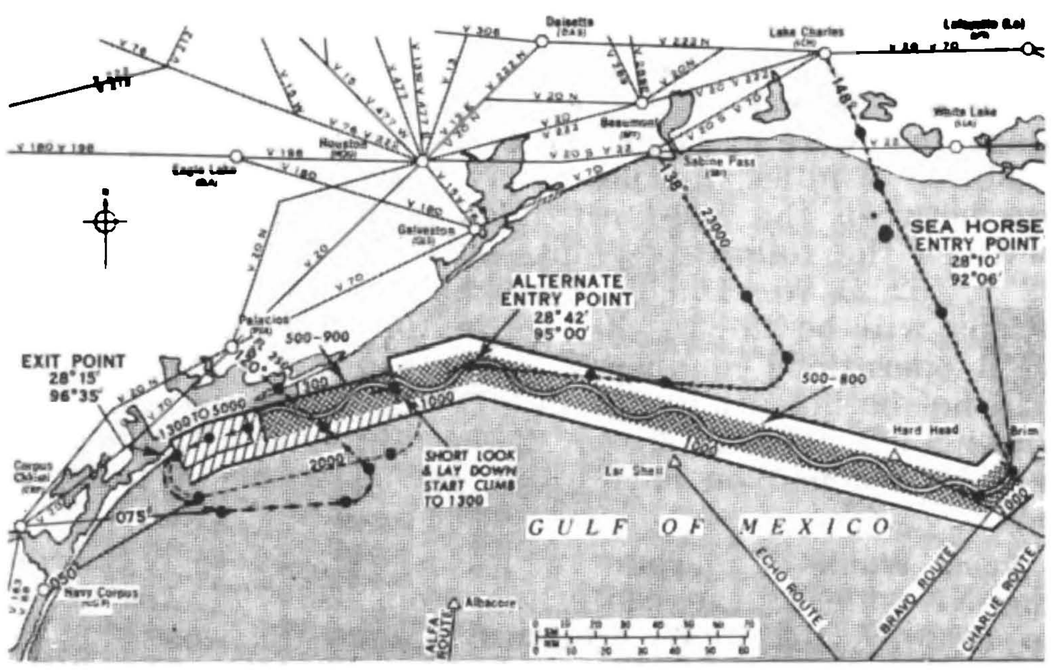
Aircraft shall cross the Lake Charles, La., VOR at 23,000′ MSL, or as assigned; maintain 23,000′ MSL or as assigned via the Lake Charles VOR 148° radial to to 25 NM fix; start descent, cross 29°31′N, 92°47′W at 19,000′ MSL, descend direct to cross 28°55′N, 92°28′W at 15,000′ MSL, descend direct to cross 28°28′N, 92°15′W at 8000′ MSL or below, descend direct to cross 28°10′N, 92°06′W at 1000′ MSL (Low level entry point). Maintain 1000′ MSL, turn right to 28°03′N, 92°16′W, direct to 28°42′N, 95°00′W, direct to 28°35′N, 95°25′W.

Short Look and Lay Down—After passing 28°35′N, 95°-25′W climb to 1300′ MSL direct 28°23′N, 96°12′W. After passing 28°23′N, 96°12′W aircraft shall maintain between 1300′ and 5000′ MSL through the bomb run corridor (5 SM either side of centerline from 28°23′N, 96°12′W direct 28°20′N, 96°25′W direct 28°15′N, 96° 35′W). (The minimum IFR altitude through the bomb run corridor is 1300′ MSL) to 28°15′N, 96°35′W, the route exit point, turn left to 28°04′N, 96°30′W, direct to 28°00′N, 96°21′W to intercept the Corpus Christi, Texas, VORTAC 075 radial. Climb via the Corpus Christi VORTAC 075 radial to cross 28°03′N, 95°41′W, at or below 17,000′ MSL; turn left to intercept the Palacios, Texas, VORTAC 120 radial, continue climb via the Palacios VORTAC 120 radial to cross the Palacios

VORTAC 120/35 at or below FL 230, continue climb via the 120 radial to cross the Palacios VORTAC 120/18 at FL 250, maintain FL 250 to the Palacios VORTAC.

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 28°15′N, 96°-35′W turn left to intercept the Navy Corpus VOR 050° radial at 2000′ MSL, maintain 2000′ MSL direct 28°-22′N, 95°26′W; turn left descending so as to cross 28°-35′N, 95°25′W at 1300′ MSL, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 28°10′N, 92°06′W to 28°24′N, 96°09′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached during daylight hours.



Alternate Entry—Aircraft shall cross the Sabine Pass VOR at FL 230 or as assigned, then via Sabine Pass VOR 138° radial maintaining FL 230 until the 47 NM fix (29°02′N, 93°33′W). Start descent direct to cross 28°44′N, 93°19′W at 16,000′ MSL turn right, descend to cross 28°37′N, 93°58′W at 4000′ MSL; descend direct to cross 28°39′N, 94°21′W at 1000′ MSL direct 28°42′N, 95°00′W thence via published route.

Route Width—The route width is reduced to 5 SM north of the centerline from 28°35′N, 95°25′W to 28°15′N, 96°35′W.

Hours of Operation—24 hours daily, seven days per week.

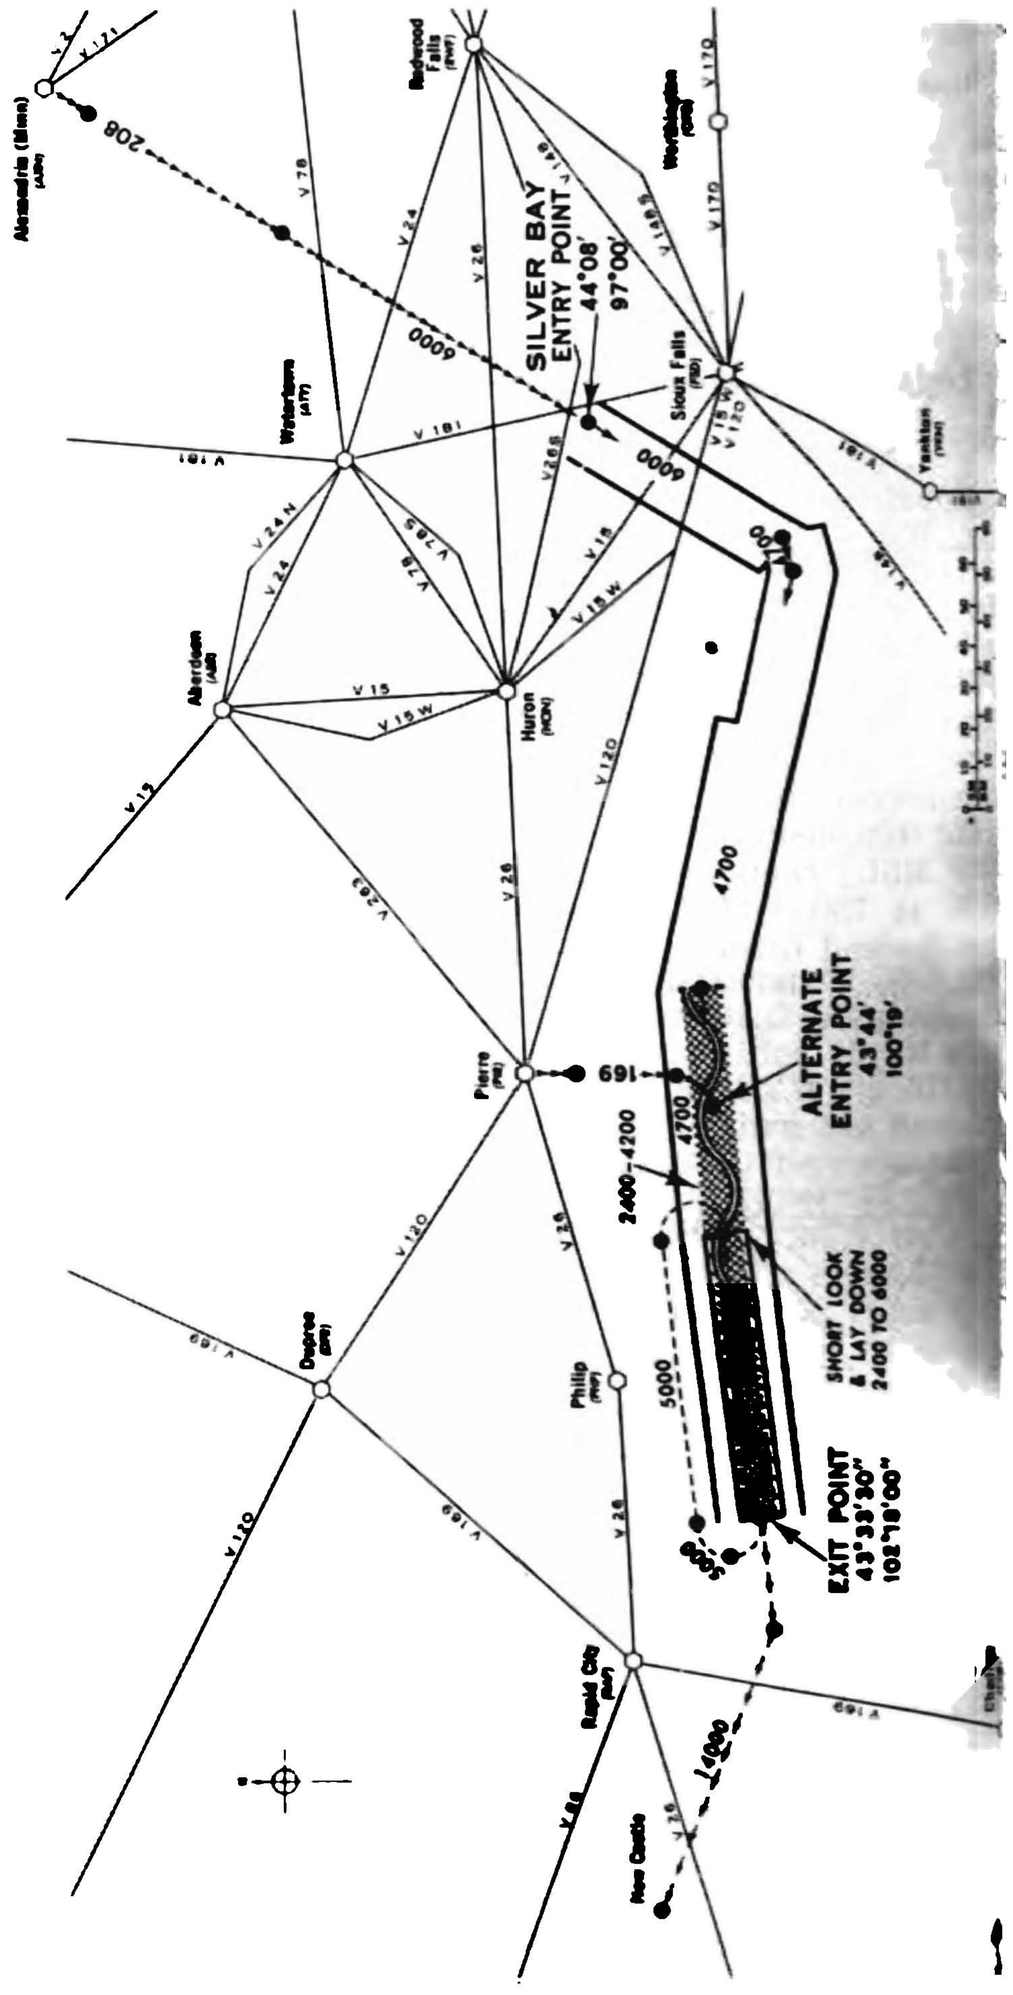
SOUTH DAKOTA

•SILVER BAY

Revised Effective March 18, 1965

Aircraft shall cross the Alexandria, Minn. VOR at FL 200 or as assigned by ARTCC and proceed via the Alexandria VOR 208° radial maintaining FL 200 or assigned altitude until 10 NM SW; then descend direct so as to cross 45°10′N, 96°00′W at 6000′ MSL; then at 6000′ MSL direct 44°08′N, 97°00′W (low level entry point); then at 6000′ MSL direct 43°29′N, 97°35′W; then turn right descending so as to cross 43°27′N, 97°45′W at 4700′ MSL; then at 4700′ MSL direct 43°47′N, 99°45′W; then at 4700′ MSL direct to 43°42′N, 100°56′W.

Short Look and Lay Down—After passing 43°42′N, 100°-56′W, aircraft shall maintain between 2400′ MSL and 6000′ MSL through the bomb run corridor (5 SM either side of centerline from 43°42′N, 100°56′W to 43°33′-30″N, 102°18′W). The minimum IFR altitude through the corridor is 4700′ MSL. After exiting the route at 43°33′30″N, 102°18′W aircraft shall climb so as to cross 43°30′N, 102°50′W at 14,000′ MSL; then at 14,000′ MSL direct to 43°51′N, 104°13′W. (New Castle, Wyoming)



Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall after exiting the route at 43°33′30″N, 102°18′W turn right and climb or descend so as to cross 43°40′N 102°29′W, at 5000′ MSL; then at 5000′ MSL continue turn to 43°47′N, 102°20′W; then at 5000′ MSL direct 43°55′N, 100°58′W; then turn right descending so as to intercept the Silver Bay route at 43°42′N, 100°56′W at 4700′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart be-

ven the following points: From 43°47′N, 99°45′W to °33′30″N, 102°18′W. During daylight hours some VFR erations will be flown 500′ above the immediate terrain. 'R operation conducted during the hours of darkness ll not be flonw lower than 800′ above the terrain. The ver VFR altitude shown is the minimum altitude that ll be reached on each route segment during daylight urs.

Alternate Entry—Aircraft shall cross the Pierre, South kota VOR (reporting point) at 15,000′ MSL or below assigned by ARTCC; then proceed via the Pierre VOR)° radial maintaining 15,000′ MSL or assigned altitude til 10 NM south (44°13′N, 100°10′W); then descend ect to 43°52′N, 100°10′W; then turn right descending as to cross 43°44′N, 100°19′W at 4700′ MSL; thence the published route.

Route Width—The route width is reduced to 5 SM itheast of centerline from 44°08′N, 97°00′W to '29′N, 97°35′W and 5 SM north of centerline between 29′N, 97°35′W to 43°35′N, 98°30′W.

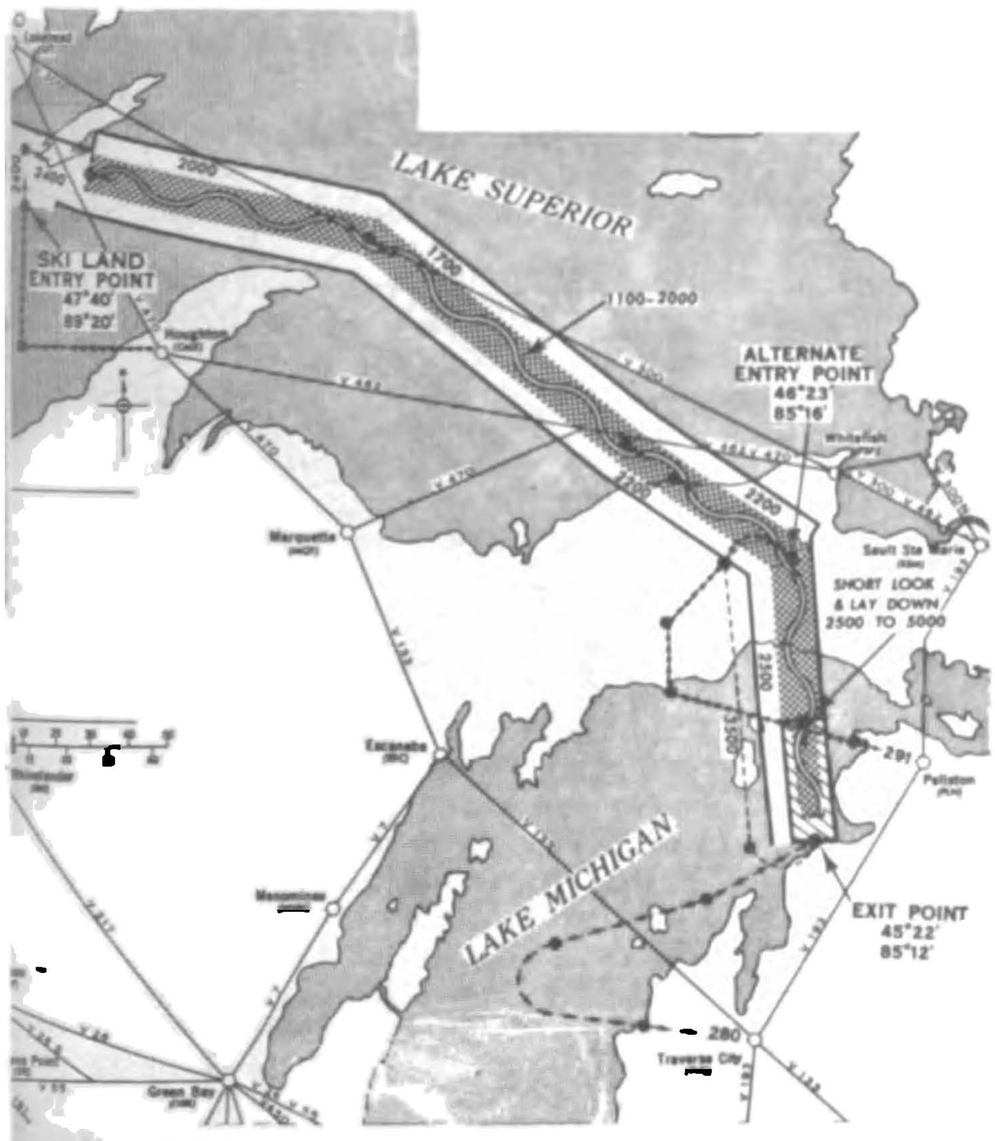
Hours of Operation—24 hours daily seven days per week.

MICHIGAN

SKI LAND

Effective September 6, 1964

Aircraft shall cross the Houghton, Michigan VOR at 00′ MSL or as assigned by ARTCC; then descend ect so as to cross 47°10′N, 89°20′W at 11,000′ MSL;



n turn right continuing descent so as to cross the ite entry point at 47°40′N, 89°20′W at 2400′ MSL, then 2400′ MSL direct 47°52′′N, 89°20′W, then at 2400′ L direct 47°48′N, 88°55′W; then descend to 2000′ L direct 47°35′N, 87°25′W; then descend to 1700′ L direct 46°49′N, 86°06′W; then climb so as to cross 42′N, 85°52′W at 2200′MSL, then at 2200′ MSL direct 23′N, 85°16′W; then climb to 2500′ MSL direct 45°-N, 85°15′W.

hort Look and Lay Down—After passing 45°48′N, 85°15′W craft shall maintain between 2500′ MSL and 5000′ L through the bomb run corridor (5 SM either side of centerline from 45°48′N, 85°15′W to 45°22′N, 85°-12′W. The minimum IFR altitude through the bomb run corridor is 2500′ MSL); after passing 45°22′N, 85°12′W then turn right climbing so as to cross 45°10′N, 85°47′W at 10,000′ MSL; then climb direct so as to cross 45°01′N, 86°33′W at 12,000′ MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at 21,000′ MSL. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22′N, 85°12′W, turn right climbing so as to cross 45°21′N, 85°32′W at 3500′ MSL, then at 3500′ MSL direct to 46°23′N, 85°37′W; then turn right descending so as to cross 46°23′N, 85°-16′W at 2500′ MSL; thence via the "Ski Land" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 47°48′N, 88°55′W to 45°27′N, 85°13′W. During daylight hours some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment during daylight hours.

Alternate Entry—Aircraft shall cross the Pellston, Mich. VOR at 20,000′ MSL, or as assigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at 20,000′ MSL or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30′′N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ski Land" route.

Route Width—The route width is reduced to 5 statute miles west and north of centerline from 47°40′N, 89°-20′W to 47°48′N, 88°55′W, and east of centerline from 46°23′N, 85°16′W to 45°22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

ARIZONA/COLORADO/NEW MEXICO/UTAH

•SLEEPY EYE

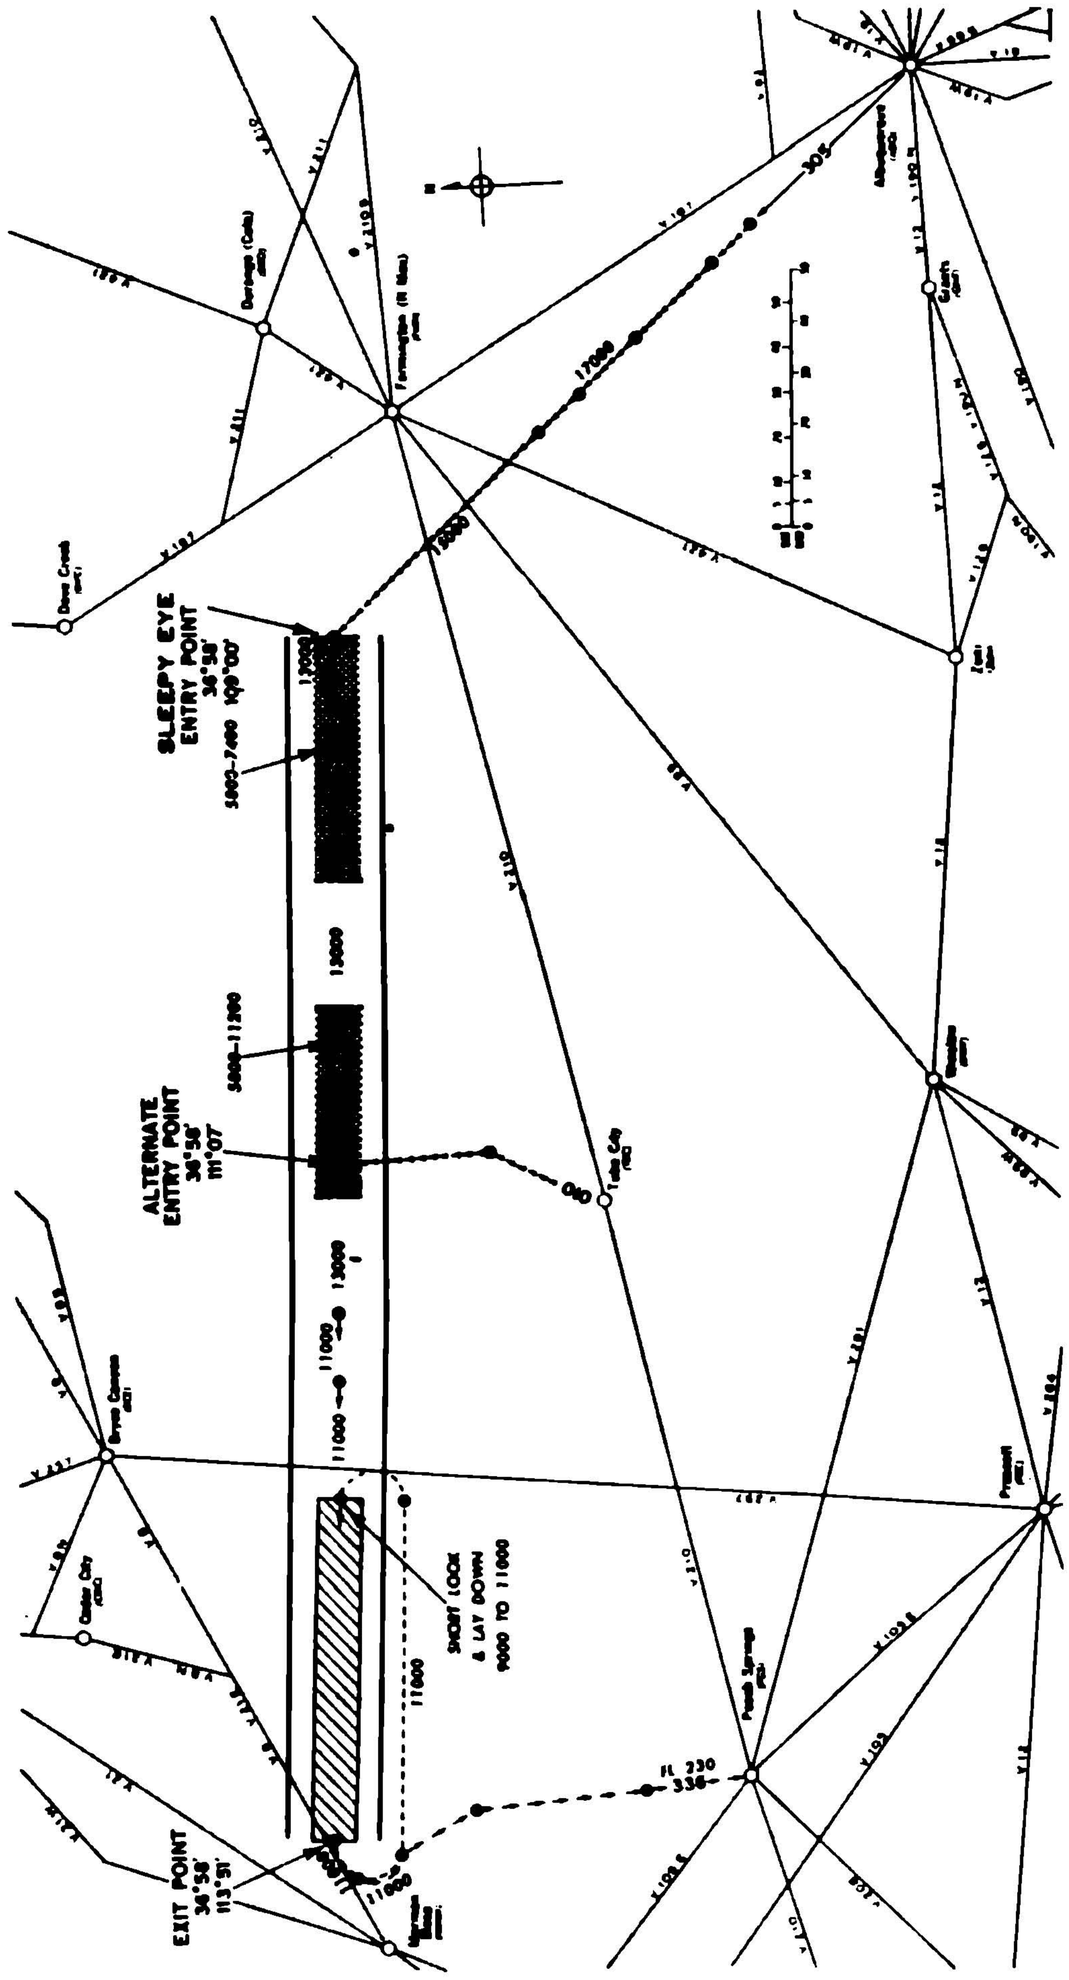
(Formerly "Main Gate")

Revised Effective April 1, 1965

Aircraft shall cross 35°34′N, 107°24′W (Albuquerque VORTAC 305/43 DME fix) at FL 250 or assigned by the ARTCC; then descend direct to cross 35°42′N, 107°33′W at FL 210; then descend direct to cross 35°57′N, 107°51′W at 17,000′ MSL; then maintain 17,000′ MSL direct 36°09′N, 108°04′W; then descend direct to cross 36°16′N, 108°12′W at 15,000′ MSL; then 15,000′ MSL direct 36°58′N, 109°00′W (low level entry point); then descend direct to cross 36°58′N, 109°10′W at 13,000′ MSL; then 13,000′ MSL direct 36°58′N, 111°42′W; then descend direct to cross 36°58′N, 112°00′W at 11,000′ MSL; then direct to cross 36°58′N, 112°29′W at or below 11,000′ MSL.

Short Look and Lay Down—After passing 36°58′N, 112°-29′W aircraft shall operate between 9,000′ and 11,000′ MSL through the bomb run corridor (5 SM either side of centerline from 36°58′N, 112°29′W to 36°58′N, 113°-51′W). After exiting the route at 36°58′N, 113°51′W aircraft shall turn left climbing to cross 36°53′N, 114°-

00′W at 11,000′ MSL; then maintain 11,000′ MSL direct to 36°44′N, 113°53′W; then climb via direct to cross 36°30′N, 113°42′W at or below 17,000′ MSL (reporting point "SLEEPY EYE" #1); then direct to cross 35°-58′N, 113°36′W (PGS 336/21 DME fix) at FL 230; then intercept and proceed via Peach Springs 336 radial to Peach Springs (35°37′30″N, 113°32′W).



Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 36°58′N, 113°51′W, turn left via direct to cross 36°53′N, 114°00′W at 11,000 MSL; then 11,000′ MSL direct 36°44′N, 113°53′W; then 11,000′ MSL direct 36°44′N, 112°29′W; then turn left direct to cross 36°58′N, 112°29′W at or below 11,000′ MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000′ visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 36°58′N, 109°00′W to 36°58′N, 110°00′W and from 36°58′N, 110°30′W to 36°58′N, 111°16′W. During daylight hours some VFR operations will be flown 800′ above the immediate terrain. VFR operations will not be conducted during the hours of darkness. The lower VFR altitude shown on the chart is the minimum altitude that will be reached on each route segment.

Alternate Entry—Aircraft shall cross the Tuba City, Arizona VOR (36°07′30″N, 111°16′W) (Reporting Point) at FL 240 or as asigned by the ARTCC; then maintain FL 240 or assigned altitude via Tuba City 091° radial until 23 miles north (36°28′N, 111°04′W); then descend direct to cross 36°58′N, 111°07′W at 13,000 MSL; thence via published route.

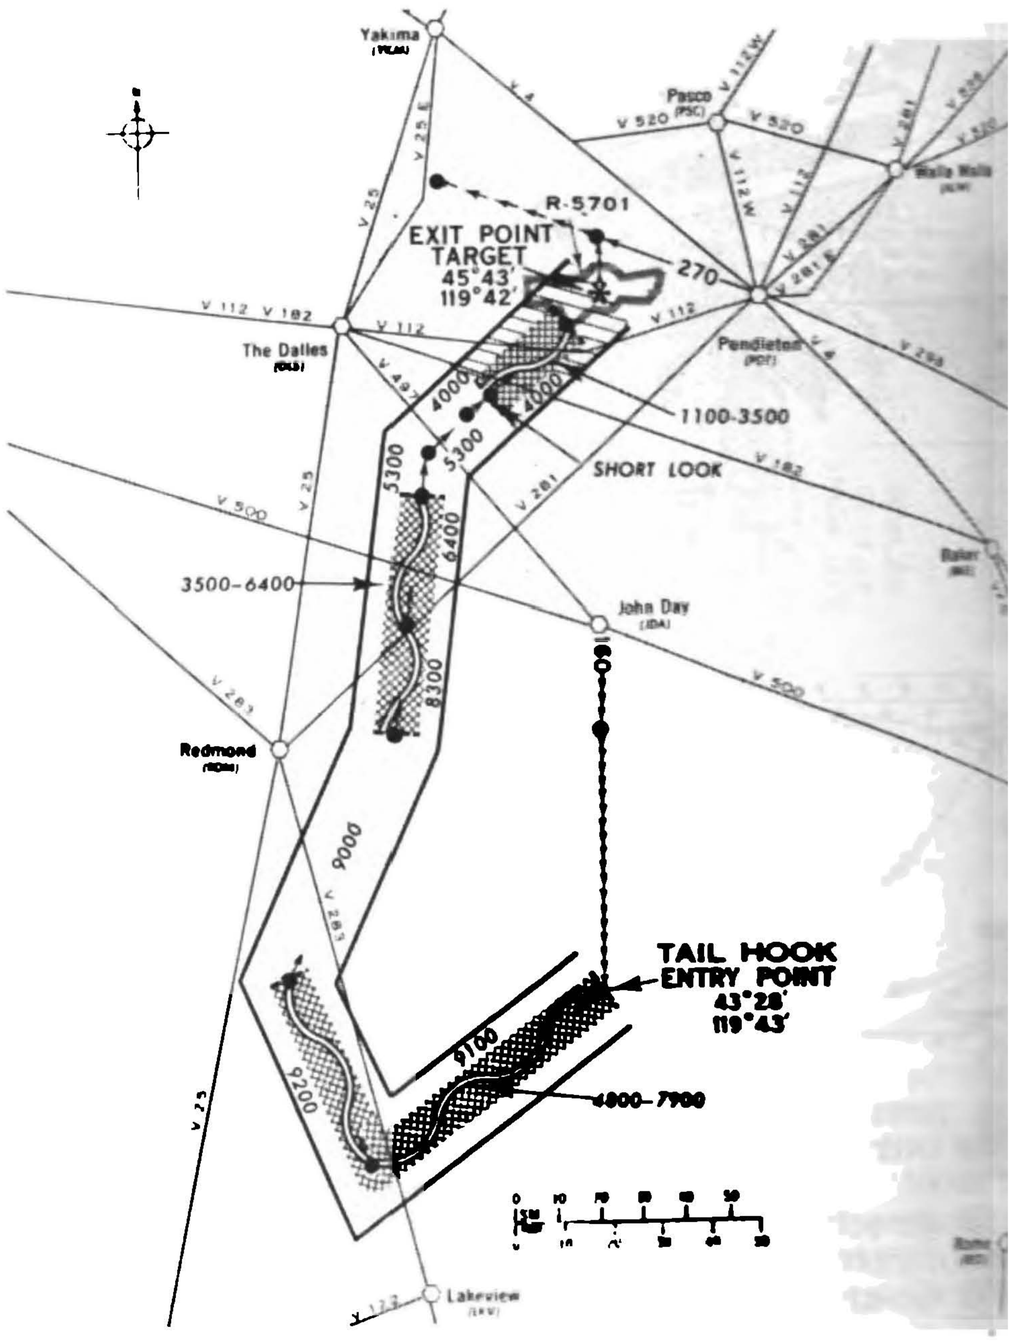
Hours of Operation—24 hours daily, 7 days a week.

OREGON

TAIL HOOK

Revised Effective February 12, 1964

Aircraft shall cross the John Day, Oregon VOR (reporting point) at 23,000′ MSL, or as assigned by Seattle ARTCC; then proceed via the John Day VOR 160° radial maintaining assigned altitude until 20 nautical miles south of the John Day VOR (44°19′N, 119°43′W); then descend to 9100′ MSL to the entry point of the low level route at 43°28′N, 119°43′W; then 9100′ MSL direct to 42°54′N, 120°45′W; then climb to 9200′ MSL direct to



43°31′N, 121°08′W; then descend to 9000′ MSL direct to 44°18′N, 120°39′W; then descend to 8300′ MSL direct to 44°40′N, 120°36′W; then descend to 6400′ MSL direct

o 45°05'N, 120°31'W; then descend to 5300' MSL direct o 45°13'N, 120°30'W; then 5300' MSL direct to 45°20'N, 20°19'W; then descend so as to cross 45°23'N, 120°13'W t 4000' MSL.

Short Look—After passing 45°23'N, 120°13'W, aircraft hall maintain 4000' MSL until within Restricted Area 5701; after crossing RBS target located at 45°43'N, 19°42'W, the route exit point, aircraft shall make a limbing left turn so as to intercept the Pendleton, Oreon VORTAC 270° radial 34 nautical mile fix (reporting oint) at or above 11,000' MSL; then climb westbound n the Pendleton VORTAC 270° radial so as to cross the endleton VORTAC 270° radial 68 nautical mile fix at 3,000' MSL.

VFR and Contour—If the encountered weather conditions long the route are equal to or better than ceiling 3000' isibility five miles, the pilot may descend VFR and perate VFR between the VFR altitudes indicated on ie chart between the following points: From 43°28'N, 19°43'W to 43°31'N, 121°08'W, from 44°18'N, 120°39'W o 45°05'N, 120°31'W, and from 45°23'N, 120°13'W to stricted area R-5701. During daylight hours, VFR erations will be flown 500' above the immediate terin. VFR operations conducted during the hours of rkness shall not be flown lower than 800' above terin. The lower VFR altitude shown on the chart is ie minimum altitude that shall be reached on each route gment during daylight hours.

Hours of Operation—1000Z to 2400Z Monday thru Friday nd 0000Z to 0800Z Tuesday thru Saturday.

GEORGIA/NORTH CAROLINA/SOUTH CAROLINA

WALNUT GROVE

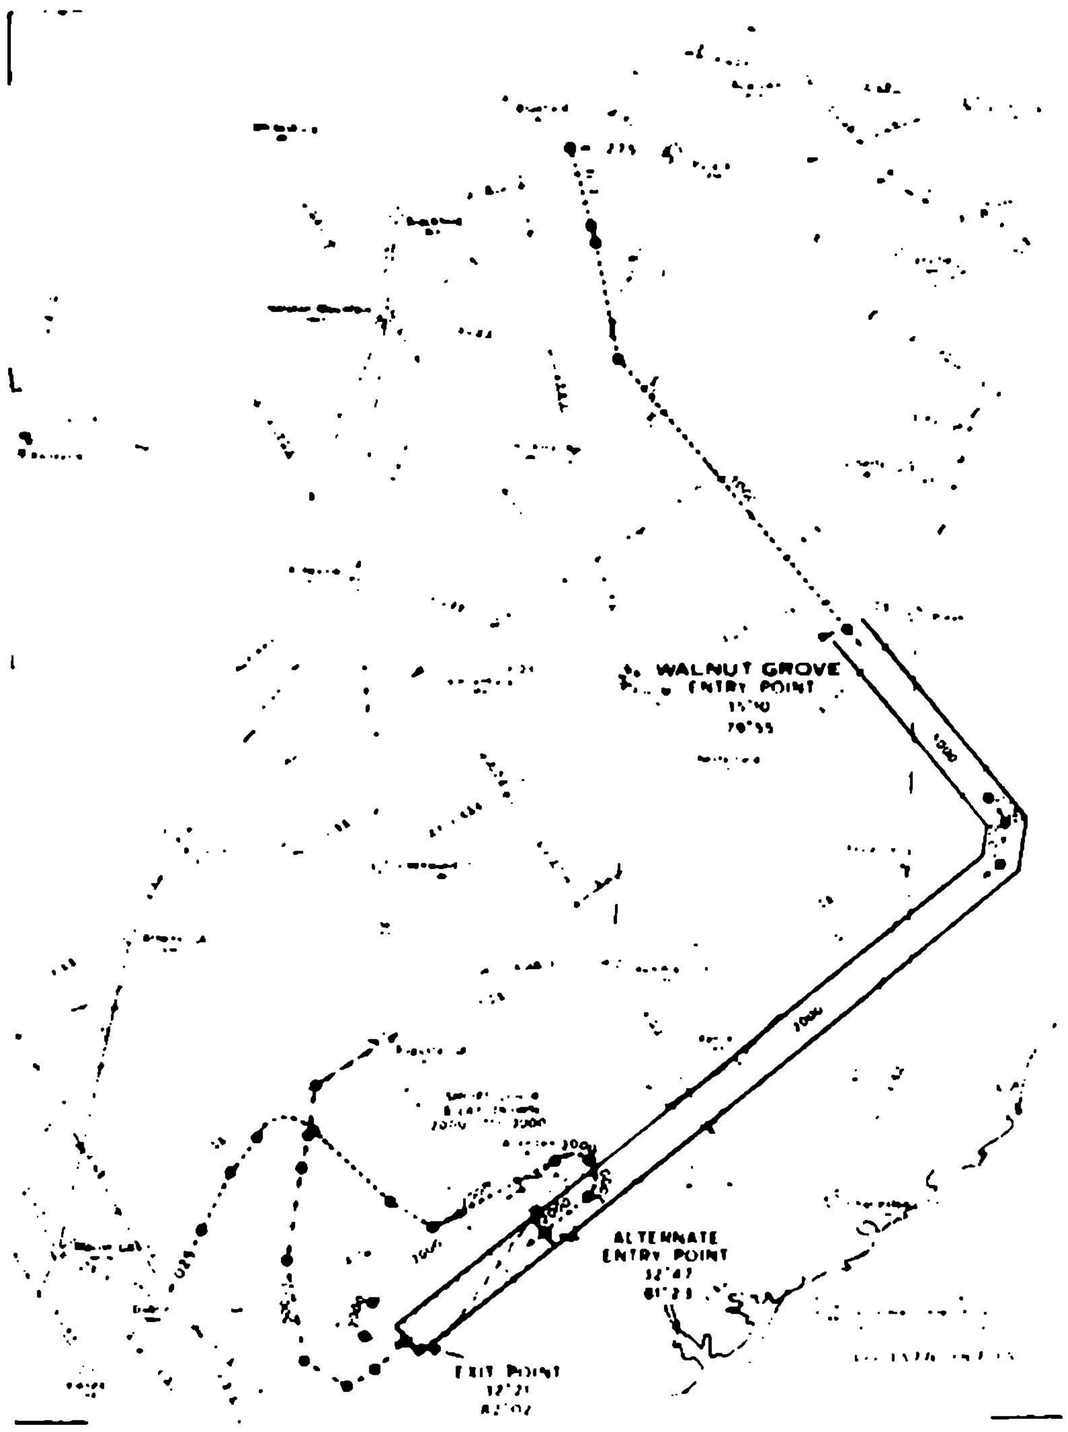
Revised Effective January 4, 1965

Aircraft shall cross the Pulaski, Virginia VORTAC 25 DME fix (37°06'N, 81°14'W) at FL 210 or as signed by ARTC; then maintain and cross 36°47'N, 08'W at FL 210; then descend direct so as to cross 43'N, 81°07'W at FL 180 or above; then descend rect so as to cross 36°15'N, 81°00'W at 5000' MSL; en at 5000' MSL direct to 35°10'N, 79°55'W (low level try point); then at 5000' MSL direct to 34°29'N, 16'W; then descend direct so as to cross 34°23'N, 11'W at 2000' MSL; then at 2000' MSL turn right to 13'N, 79°13'W; then at 2000' MSL direct to 32°47'N, 23'W.

Short Look and Lay Down—After passing 32°47'N, 81°23'W rcraft shall maintain between 2000' MSL and 3000' SL through the bomb run corridor (5 SM either side center line from 32°47'N, 81°23'W to 32°21'N, 82°-'W). After exiting the route at 32°21'N, 82°02'W, rcraft shall climb to or maintain 3000' MSL to 32°-'N, 82°10'W; then climb direct so as to cross 32°10'N, 18'W at 6000' MSL; then climb direct so as to cross 16'N, 82°30'W at 11,000' MSL; maintain 11,000' rect 32°40'N, 82°35'W; then climb direct so as to cross 02'N, 82°31'W at FL 180; cross 33°10'N, 82°29'W at L 200; cross 33°22'N, 82°27'W at FL 230 or as assigned; then at FL 230 or as assigned direct to the ugusta, Georgia VOR.

Re-Entry—Aircraft that are scheduled to execute an ditional bomb run shall, after exiting the low level ute at 32°21'N, 82°02'W, turn right and descend or aintain 2000' MSL to 32°22'N, 82°13'W; then at 2000' SL continue turn to 32°30'N, 82°11'W; then at 2000' SL direct to 33°04'N, 81°20'W; then at 2000' MSL rn right to 33°04'N, 81°10'W; continue turn to 32°-'N, 81°11'W; then at 2000' MSL direct to 32°47'N, 23'W; thence via the published route.

Alternate Entry—Aircraft shall cross the Dublin, Georgia VOR (32°31'N, 83°08'W) at FL 260 or as assigned; then descend direct via the Dublin VOR 025° radial so as to cross 32°47'N, 82°50'W at FL 230; cross 33°01'N, 82°51'W at 17,000' MSL; cross 33°09'N, 82°44'W at 15,000' MSL; turn right to cross 33°11'N, 82°28'W at 13,000' MSL; cross 32°54'N, 82°06'W at 3000' MSL; then descend direct so as to cross 32°48'N, 81°54'W at 2000' MSL; then at 2000' MSL direct to 33°04'N, 81°20'W; then at 2000' MSL turn right to 33°04', 81°10'W; continue turn to 32°55'N, 81°11'W; then at 2000' MSL direct to intercept the Walnut Grove route at 32°47'N, 81°23'W.



Route Width—The entire route width is reduced to 5 SM either side of centerline.

Hours of Operation—Primary entry 1900Z to 2300Z and from 0100Z to 1400Z, 7 days per week; alternate entry 24 hours per day, 7 days per week.

COLORADO/KANSAS/NEW MEXICO

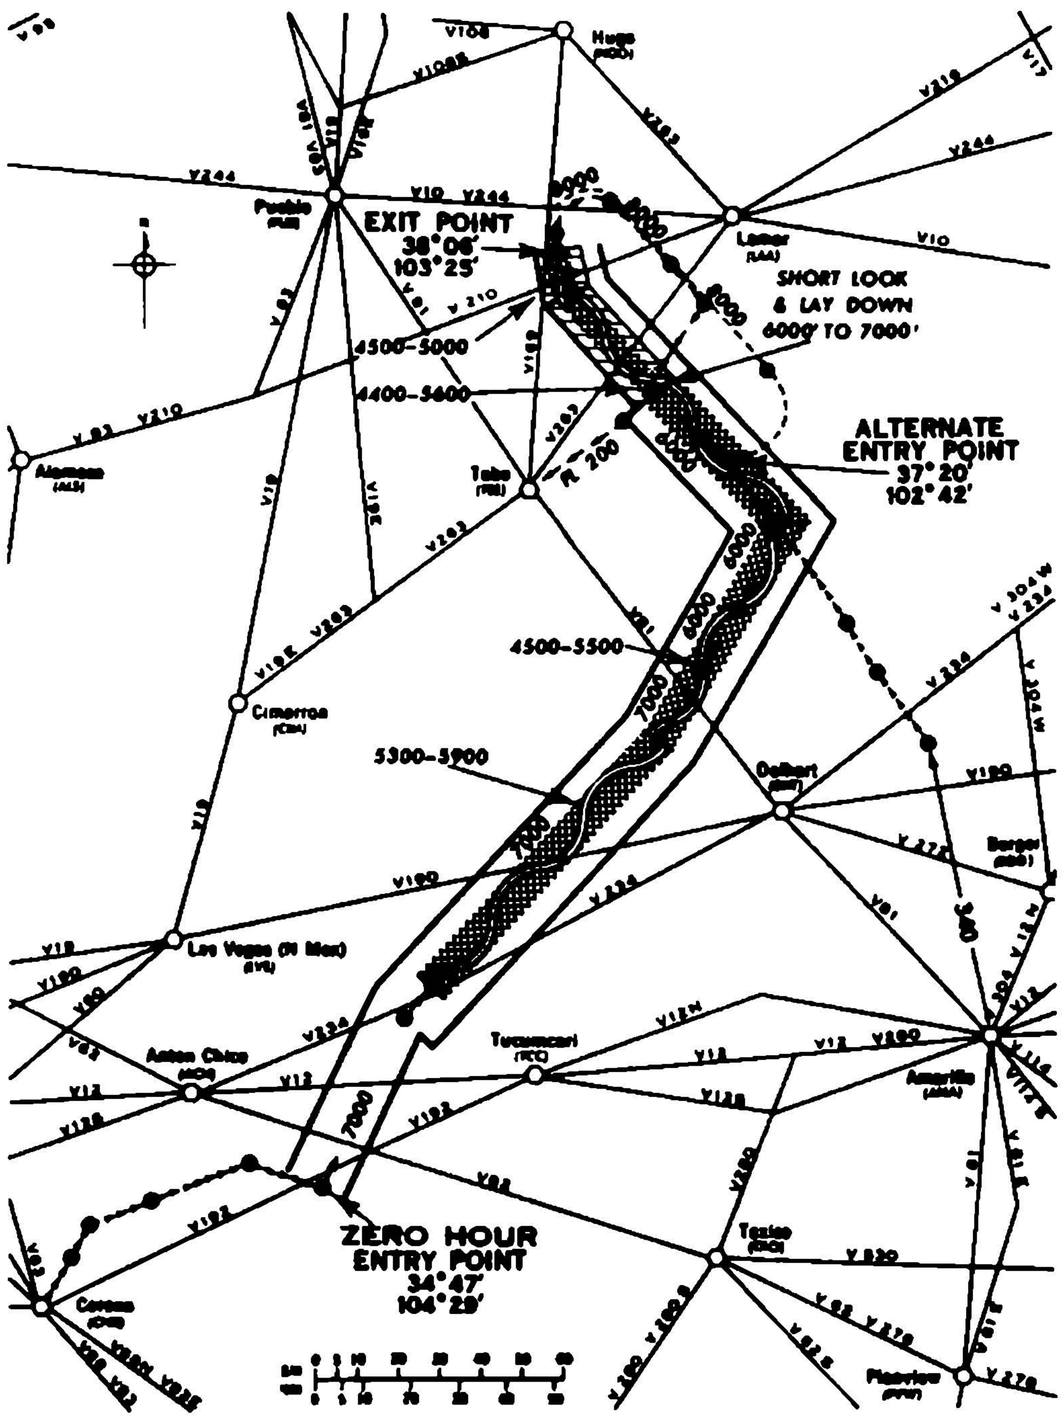
OKLAHOMA/TEXAS

ZERO HOUR

Revised Effective March 3, 1965

Aircraft shall cross 34°22'N, 105°40'30"W (Corona, New Mexico VOR) (reporting point) at FL 250 or as assigned by ATC, then descend direct to cross 34°33'N, 105°33'W at or below FL 230; then descend direct to

cross 34°40′N, 105°28′W at FL 220; then descend direct to cross 34°45′N, 105°12′W at or below 17,000′ MSL; then descend direct to cross 34°53′N, 104°48′W at 10,000′ MSL; then descend direct to cross the route entry point at 34°47′N, 104°29′ W at 7000′ MSL, maintain 7000′ MSL direct to 35°24′N, 104°08′W; then 7000′ MSL direct to 36°22′N, 103°00′W; then 7000′ MSL direct to 36°37′N, 102°49′W; then descend direct to cross 36°49′N, 102°40′W at 6000′ MSL; then 6000′ MSL direct to 37°06′N, 102°-27′W; then 6000′ MSL direct to 37°36′N, 103°00′W.



Short Look and Lay Down—After passing 37°36′N, 103°-00′W, aircraft shall maintain between 6000′ MSL and 7000′ MSL thru the bomb run corridor (5 SM either side of centerline from 37°36′N, 103°00′W to 37°57′N, 103°-22′W to 38°06′N, 103°25′W). After exiting the route at 38°06′N, 103°25′W climb direct to cross 38°09′N, 103°-26′W at 8000′ MSL, turn right, maintain 8000′ MSL to 38°15′N, 103°10′W, then 8000′ MSL direct to 38°02′N, 102°55′W, then climb direct to cross 37°53′N, 102°45′W at 9000′ MSL, continue climb direct to cross 37°30′N, 103°08′W at FL 200; then maintain FL 200 direct to Tobe VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°06′N, 103°25′W, climb direct to cross 38°09′N, 103°26′W at 8000′ MSL, maintain 8000′ MSL right turn to 38°15′N, 103°10′W, then 8000′ MSL direct to 37°40′N, 102°30′W; then turn right descending to cross 37°24′N, 102°47′W at 6000′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 35°30′N, 104°01′W to 38°06′N, 103°25′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude shown on the chart is the minimum that will be reached on each segment during daylight hours.

Alternate Entry—Aircraft shall cross 36°19′N, 101°51′W (Amarillo VORTAC 340/62) at FL 230, or as assigned by ATC, then descend direct to cross 36°34′N, 102°03′W at 17,000′ MSL; then descend direct to cross 36°44′N, 102°-11′W at 14,000′ MSL; then descend direct to cross 37°-06′N, 102°27′W at 11,000′ MSL; then descend direct to cross 37°20′N, 102°42′W at 6000′ MSL; thence via the published route.

Route Width—The route width from 34°47′N, 104°29′W to 35°24′N, 104°08′W is reduced to 5 SM on the east side of centerline, and from 37°36′N, 103°00′W, to 38°06′N, 103°25′W, the route is reduced to 5 SM on the west side of centerline.

Hours of Operation—24 hours daily, 7 days per week.

• LOW ALTITUDE VFR MILITARY OPERATIONS

The military services have a continuing requirement to conduct VFR low altitude training flights at and below 1,500 feet feet above the surface in excess of 300 knots indicated airspeed. These flights are conducted only when weather conditions are equal to or better than 3,000 feet ceiling and five miles' visibility.

The routes used by these training flights are selected to avoid control zones, control zone extensions, and airport traffic areas; and to the extent possible, uncontrolled airports by three statute miles, control areas, and transition areas.

The USAF Aeronautical Chart and Information Center is publishing a narrative description in booklet form and a chart depicting these routes. The initial publication was effective March 24, 1963, and will be issued every 28 days thereafter. The chart is comprised of one large sheet with the eastern United States on one side and the western United States on the other. Both the chart and narrative route description booklet are available to the geneeral public as a brochure by subscription on request to the Director, Coast and Geodetic Survey, 14th and Constitution Avenue, N.W., Washington D.C. 20230 Subscription requests should be for the "USAF/USN Flight Information Publication—Planning. Section I–A, Military Training Routes." In addition each FSS will have this publication available for preflight pilot briefings. Pilots should review these charts to acquaint themselves with those routes that are located along their route of flight and in the vicinity of the airports from which they operate.

STANDARD INSTRUMENT APPROACH PROCEDURES ACTIONS

The following Standard Instrument Approach Procedures will be revised, established, or cancelled effective Mar 27, 1965:

Location	Procedure	Action
LOW FREQUENCY RANGE		
ik, Alaska—Aniak Arpt	No. 1, Amdt. 7	Revised
nai, Alaska—Kenai Arpt	No. 1, Amdt. 11	Revised

Federal Aviation Agency

Airman's INFORMATION MANUAL

SECTION III A

NOTICES TO AIRMEN

10 DECEMBER 1964

Section III–A—NOTICES TO AIRMEN

This section is issued every 14 days ond is primarily designed to supplement Section III of the IM. It contains selected notices from the daily NOTAM Summary, Airman Advisories, new or revised il Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

OTE: Data printed entirely in bold face type are considered permanent and will usually be cited only once. Such information ould be noted on charts and records. Temporary information is ntinuously cited until the condition is no longer in effect.

OTE: Data is arranged in alphabetical order by State (and within a State by City or locality).

EW OR REVISED DATA: New or revised data are indicated by a ock dot (●) preceding the item.

ALABAMA

AYOU LA BATRE, BAY VIEW ARPT: Paved 3000' drag strip 75'S and parallel to turf ruwy. P-line each side of drag strip and wire across strip 75' from E end. N-S turf ruwy under constr, covered with stumps not to be used for acft operns.

IRMINGHAM MUN ARPT: 833.5' (1810' MSL) lgtd TV twr constrd 5 nmi SSW (207° T) at lat 33°29'25.5" long 86°47'48".

UCKER: Extsv IFR and VFR student trng conducted in area bounded by V–115 W, V-241 S, V-70 N and V-241 E. Normal hrs of operns 0700-2400 Mon-Fri from surface to 10,000'.

OBILE, BROOKLEY AFB: Caution, effective immediately and until further notice all aircraft are warned of extensive high performance jet (F-105) traffic in the following area during dalgt hrs only: From the surface to 5000' MSL over the Mississippi Sound from a point 30°15'N, 88°04'W to a point 30°15'N, 88°30'W. Concerned aircraft will be flying a race track pattern between the above listed coordinates for the purpose of contour map/terrain avoidance radar calibration. Therefore, the pilots in the F-105 aircraft will be limited to the amount of visual surveillance they can give to air to air separation under VFR conditions.

ELMA CRAIG AFB: Extsv jet student trng conducted during dalgt hrs and occasional ngts Mon-Fri from surface to 9000' MSL. Craig ctl zone saturated dalgt hrs to 9000' MSL during student trng. VFR acft should contact Craig twr on 236.6 or 119.5 mc for tfc advisories. Craig Twr is avbl for lndg advisories for acft lndg Selfield. Clsd exep for ofl bus. clsd to transit aero club acft.

ARIZONA

HUACHUCA: See Yuma Special Notice.

LA BEND: See Yuma Special Notice.

ARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

MESA, FALCON FLD. Until Feb 20, 1965, small rocket test firing within one mile radius of a point 3 nmi N maximum height 2,500 AGL. One day per week 1100 MST to 1500 MST. Contact Phoenix FSS for details.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hi-density jet tfc will be operg VFR on V93/V94 between longitude 113 45'W and longitude 112 18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V93 V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: VOR 1, Amdt. 10 is revised as follows, efctv indtly: Crs and distance PRC VOR to arpt, 112 ---4 mi. Add note: Final approach course is to NE side of arpt.

TUCSON INTL ARPT: ADF Proc. No. 1, Orig. is revised as follows, effective immediately: T-dn, more than two eng., more than 65 knots, 200-½ vice 300-1.

TUCSON, RYAN FLD: About Nov 16, all rnwys will be clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307. Efctv Jan. 15, 1964 to Jan 15, 1965 the flwg R–2303 Yuma East restricted area is established: Bndrys: beginning at 33°, 114°17′20″; thence N along State Highway 95 to 33°28′, 114°13′; 33°24′, 113°39′; 33°13′12″, 113°21′36″; 33°07′17″, 113°24′10″; 33°02′, 113°33′50″; 33°02′, 113°56′30″; 33°00′, 114°11′; to point of beginning. Designated Altitudes: 1500′ above the surface to 20,000′ MSL. Time of Designation: Continuous, Jan. 15, 1964 to Jan. 15, 1965. Controlling Agency: Federal Aviation Agency, Los Angeles ARTC Center. Using Agency: Commanding Officer, Yuma Proving Ground, Yuma Ariz.

ARKANSAS

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′. Rnwy 22 and 31 not avbl for air carrier acft ngt lndgs due to unlgtd obstns apch end.

CALIFORNIA

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with operni transponder.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°40′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles/Salt Lake City boundary. J11 FL 180–230 incl. from 50 miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: Beginning on or about Nov 25, a 90-day test will be conducted by the LAX FSS to evaluate the effectiveness of new concept in Transcribed Weather Broadcast script. The new concept will differ from the present procedures in that meteorological and Notice to Airmen data will be broadcast as applied to six commonly-travelled routes out of the Los Angeles Metropolitan Area. Enroute weather reports will follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes will be spoken. Dissemination will continue to be over the Los Angeles "Homer" on 332 kc; by telephone Spring 6–1640 or Spring 6-1641 and will additionally be fed into a special "listening-only" interphone circuit paralleling the present "fastline" circuit serving subscribers at Van Nuys Arpt; Lockheed Air Terminal in Burbank; San Fernando Arpt; Whiteman Arpk; in Pacoima and Rancho Conejo Arpt near Thousand Oaks. For the duration of the test period Weather Bureau pilot automatic telephone weather answering PATWAS will be discontinued, the two telephone numbers listed above are presently in use in the PATWAS program. As soon as practicable the other PATWAS telephone numbers Poplar 2–4111 and Davis 3–4626 will be connected to the Transcribed Weather Broadcast equipment. Until this is accomplished calls on these lines will be referred to the two Spring numbers.

MODESTO CITY-COUNTY ARPT: All pilots must ctc Stockton Apch Ctl prior to conducting IFR flight operns in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

POINT ARGUELLO: Civil acft desiring to transit W–532 call Navy Point Arguello on 122.5 mcs (guard 24 hrs) and listen for reply on 124.4 mcs.

RIVERSIDE MUN ARPT: Efctv Dec 10, 1964 Riverside control zone will be efctv from 0500 to 2130 local time. All pilots must contact March Apch Ctl prior conducting IFR flight operns in the Riverside control zone.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200′ or slightly wider than standard ILS OM. During VOR outages or shutdowns for maintenance, flt checks reveal numerous usable signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

COLORADO

BROOMFIELD, JEFFERSON CO ARPT: First 3000′ of rnwy 11 plus associated txwy clsd for resurfacing, usable length both directions 3000′. Ctc unicom for instructions.

DENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430–2330Z within a radius of 2500′ of point lctd 104°41′11″W, 39°39′30″N up to 1000′ above surface.

EAGLE: Ctld firing for use of Camp Hale. Area 5 nmi radius from point lat 39°27′, long 106°19′30″, max ordinate of firing 15,000′ MSL. Time of use continuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

PUEBLO: Controlled Firing (demolition) area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38°22′00″ E, long 104°21′22″; S, lat 38°18′00″; W, long 104°25′50″. Hrs of usage: 0900–1600 MST, Mon-Fri. Max alt 5000′ above the surface.

DELAWARE

ILMINGTON, GREATER WILMINGTON AIRPORT: Proc. No. ILS-1, Amdt. 8, efctv 8 Aug 64. During the period of the West Chester VORTAC shutdown, the following temporary missed approach procedure will be in effect: If visual contact not established upon descent to authorized landing minimums, or if landing not accomplished, make climbing left turn to 1630' and return to Wilmington LOM. Hold South, one-minute right turns, inbound crs. 014 degrees.

DISTRICT OF COLUMBIA

ASHINGTON DULLES INT'L AIRPORT: ILS-19R, Amdt. 4-9-7-63 effective Immediately missed approach revised: Make right turn to intercept HRN radial 227 degrees climb to 4000 ft proceed to Blue Ridge Int via V39 and V144. Hold West on Blue Ridge Int LDN 110 degrees radial, 110 degrees inbound 4000 ft one minute left turns.

ASHINGTON (CHANTILLY, VA.), DULLES INTL ARPT: Proc No. ILS-19R, amdt 4, efctv 7 Sept 1963. RVR not commissioned rnwy 19, basic minimums remain in effect.

ASHINGTON, MT VERNON: Low flying acft requested o avoid immediate vcnty Mt. Vernon estate lctd W bank otomac River 10 mi S Washington Natl Arpt.

ASHINGTON NATL ARPT: The Weather Bureau and he Federal Aviation Agency will jointly institute a runway visibility observation program for runways 18, 36 nd 15. Whenever the runway visibility system serving unway 36 is inoperative with visibility one and one half nile or less or runways 18 and 15 are in use for landing ircraft and the visibility is at or below one and one alf mile an observer will be stationed at the approach nd of the landing runway and will report visibility alues manually in one quarter mile increments. These alues shall be used in conjunction with reported ceilng and will be mandatory for the runway being served nd should not be construed as runway visual range RVR) values.

ASHINGTON NATL ARPT: JET POLICY FOR VASHINGTON NATIONAL AIRPORT—Due to mited ground handling facilities at the Washington ational Airport, flight operations of only those turbot aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, nly approved types of turbojet aircraft of short or edium range (1) are engaged in corporate, private harter or rental type operations, and (2) solely intnd to utilize the Airport's General Aviation ground rvice facilities. B. Currently approved types of edium and short range turbojet aircraft are as folws: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. hort or medium range turbojet aircraft of types not sted above must secure advance authorization from e Airport Manager. Requests for such authorization ould be made at least 48 hours in advance of the anned aircraft arrival at the Airport. D. Because f limited capabilities, the Airport cannot accomodate erations of turbojet aircraft for proficiency or prace take-off or landings.

FLORIDA

PS TO HAITI, PUERTO RICO AND DOMINICAN EPUBLIC SPECIAL NOTICE: Non-commercial acft e prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergenevy fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

COCOA, CENTRAL BREVARD COUNTY ARPT: Fld will be clsd until aprxly January 1965 for constr.

JACKSONVILLE, IMESON ARPT: Caution, all pilots making ILS apchs to arpt, a bridge lctd aprxly 1¼ mi SW of apch end of rnwy 5 lgtd very brightly at ngt, could give pilots false identification as being a rnwy especially during low ceilings or poor visibility conditions.

PENSACOLA: Intensive student conventional and jet VFR trng activity crossing V22 at 11,000' MSL btn Navy Saufley (NUN) VOR and Navy Whiting VOR 135 radial; and within a radius of 3 nmi Whiting NAAS and Saufley NAAS at and below 2500' MSL. Suggested alter course or altitude to avoid these areas. Radar VFR advisory service avbl on 119.0, 286.0 mc for acft eastbound or arriving from the E, or on 123.9, 281.8 for acft westbound or arriving from the west.

PENSACOLA MUN ARPT: ADF 2, Amdt 3 is revised as follows: Transition NUN VOR to PNS rbn 1600ft. Procedure turn altitude 1600 ft.

TAMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should cte Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft revg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13-31 only rnwy in use. Threshold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1960'.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless otherwise authorized, no person may operate an aircraft in the air corridor between R-2915A, R-2915B and R-2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

GEORGIA

CARROLLTON MUN ARPT: Clsd for resurfacing.

ST. MARYS ARPT: Trash dump at ends of rnwys 19 and 22 attracts large flocks of seagulls. Frequent burning of trash reduces visibility on apch.

STATESBORO MUN ARPT: 1000' S end rnwy 18-36 to intsxn of rnwy 13-31 clsd for unknown duration. Remaining rnwy rought usable length 4200' both directions.

ILLINOIS

CHICAGO, MIDWAY ARPT TWR: Efctv Nov 24 radar initiated service to provide tfc advisories to all acft

operg VFR in Chicago Metro Area that desire this service. This service is designed to aid pilots to see and avoid other tfc by providing radar tfc info. All VFR acft operg within a 30 mi radius of MDW at 10,000' MSL or below can obtain this service by ctcg MDW radar on 119.2 mc. On initial ctc acft are required to advise MDW radar of their aprx position and alt, heading being flown and their destination. All tfc will be current altimeter at MDW. Acft lndg at MDW will be issued wind and rnwy info. Tfc transiting the area will be provided this service til 3 mi from perimeter of radar scope at which time this service will be terminated. Radar service described herein is not to be interpreted as relieving the pilots of their responsibility for continual vigilance to see and avoid other acft. It is provided to aid him in his visual surveillance by calling to the pilots attention pertinent tfc. Pilots are reminded that the surveillance radar utilized by controllers does not provide alt info. Pilot participation is not mandatory but is recommended.

PEORIA, GREATER PEORIA ARPT: 5' unlgtd fence at apch end rnwy 22. Arriving acft with proper freq should make initial ctc with apch ctl on 125.8 mc regardless of wea.

INDIANA

SCOTLAND: Controlled explosive demolition is conducted week days 0730–1600, at the U.S. Naval Ammunition Depot, Crane, Ind in a controlled firing area one nmi in diameter lctd 160°/8.7 nmi from Scotland VORTAC from the surface to 2200' MSL.

IOWA

CEDAR RAPIDS MUN ARPT: ADF Proc. No. 1, Orig.: ILS–8, Amdt. 3; VOR Proc. No. 1, Amdt. 6, VOR Proc. No. 2, Amdt. 1 and VOR/DME Proc. No. 1, Amdt. 2 is revised as follows, effective July 1, 1964: Add note "Radar vectoring to final approach course by Chicago Center Radar is authorized."

CHARITON ARPK: Clsd for rnwy paving.

CLINTON MUN ARPT: VOR Proc. No. 1, Amdt. 4 is revised as follows, effective July 1, 1964: Add note "Radar vectoring to final approach course by Chicago Center Radar is authorized."

DAVENPORT ARPT: ADF 1 Amdt. 1 efctv 7 Dec 63 revised as follows: Minimum altitude over facility on final approach course 1500 vice 1400 feet.

DAVENPORT MUN ARPT: ADF No. 1, Amdt 1 and Moline, Ill—Quad City Arpt., ADF No. 1, Amdt 10, ILS–9, Amdt 10 and ILS–27, Amdt 5 are revised efctv immediately: Radar Vector to final apch course by Chicago Center Radar authorized.

KANSAS

SALINA MUN ARPT: VOR Proc. No. 1, Amdt. 5, efctv 30 September 1961, is revised as follows effective immediately: Add Note: Radar vectoring to final approach course authorized.

TOPEKA, PHILIP BILLARD ARPT: ADF No 1, Amdt. 16: ILS–13, Amdt 17 and ILS–13, Amdt 7 are amended as follows, effective immediately: C–dn, two eng or less, 65 kt or less, 600–1 vice 500–1. Unlighted smoke stack 1137' msl within circling criteria.

MARYLAND

ANNAPOLIS SPECIAL NOTICE. Electromagnetic radiation vcnty parabolic antenna at Greenburry Point lat 38°58'22", long 76°27'00", about 2.3 nmi ESE. immediately SE Annapolis NAF. This radiation not visually apparent but definitely dangerous to personnel, acft, pwr service, insts. Pilots of helicopters warned against hovering in vcnty and should avoid apch closer than ½ mi.

CHESTERTOWN, GILL ARPT: Clsd to transients Dec 15, 1964–March 31, 1965.

Suggested arrival and depature route NE of Las Vegas: remain E of the 025 radial of LAS VORTAC and outer limits of Nellis AFB ctl zone at or below 7000′ MSL Frequent violations reported of Restricted Area R–4808 NW of Las Vegas. This area extremely hazardous to intruding aircraft. All civil acft warned to keep clear of this area. Caution in ctl zone area, tow-target patn between Nellis AFB and a point 8.7 nmi N of Nellis AFB descending from 10,000′.

NEW JERSEY

ATLANTIC CITY NAFEC/ATLANTIC CITY (POMONA) ARPT TWR: Experimental DME rnwy 13 ILS operg channel 30, freq 991 mc ident: XAB comments required.

DOVER: Picatinny Arsenal: ctld firing area 3 mi wide extending from Dover to point 11 mi N. Area centers on railroad running N from Dover. Mortar firing and demolition blasts surface to 7000′ MSL. Prior entering area ctc Teterboro Rdo.

NEW MEXICO

ALBUQUERQUE: Controlled firing will be conducted periodically and on a continuing basis at a point aprxly 8 mi E of Albuquerque Homing facil and 8 mi SE of E end of rnwy 8 Kirtland AFB. Ctc Albuquerque FSS or twr for time and avoidance area.

ALBUQUERQUE: "Cratering—uncased explosives" tests will be conducted 0700–1000M daily excp Sat and Sun. These ctld firings are conducted only during VFR wea conditions and lctd aprxly 8 mi SSE Kirtland AFB at lat 34°57′30″, long 106°33′45″. Soil clods may be thrown to a radius of 1000′.

LOS ALAMOS: Use of the airstrip at Los Alamos is limited to official purposes of the US Atomic Energy Commission and emgcy lndgs. Any unauthorized use will be considered trespass. Any lndgs on the Los Alamos Arpt, or other use of its facilities, by a private pilot who does not have written permission from the Atomic Energy Commission, shall be deemed for all purposes to be (1) an assumption of all risks and liabilities by such pilot in connection with his use of the Los Alamos Arpt, (2) a recognition and agreement that neither the United States of America, its cost-type contractors, or their officers, agents or employees has any obligation to such pilot to operate and/or maintain the airport or its facilities in a safe manner or condition, and (3) an agreement to sign a document reflecting the foregoing.

NEW YORK

NEW YORK CITY: 1520′ rotating bcn atop Empire State Bldg lctd aprxly 11 mi NW JFK Arpts operg on rotating basis dusk to midngt. From midngt to dusk break bcn in fixed position with light beamed directly S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effective August 1, 1964, Kennedy Tower will begin an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling relative to frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a non-control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runways currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs, when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control that they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay, and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK, LA GUARDIA ARPT AREA: Tankers with mast exceeding 100′ occasionally traverse Rikers Island ship channel creating obstruction to acft operg on rnwys 13–31 and 4–22. Ctl twr issuing advisory as to presence of tankers when info avbl.

NEW YORK, LA GUARDIA ARPT: FEE Clsd to all propelled and motorless acft and acft over 105,000 lbs unless prior permission of Arpt Mgr.

ROMULUS, SENECA ARMY DEPOT: Controlled fire for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circle

area with a 1350' radius centered at lat 42°46'59"N and long 76°53'06"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

NORTH CAROLINA

IZABETH CITY MUN ARPT: Due to heavy VFR GCA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth ity Mun arpt contact Elizabeth City Coast Guard twr n 126.2 mc for tfc information. Acft without radio nter 500' pattern from the west.

YETTEVILLE, POPE AFB: Extensive operns to ,000' MSL 1200-2200Z Mon thru Fri. Pilots of all ıft are advised that in an area from Lillington, N.C., orth along arwy V3E 6 NM to Chalybeate, N.C., ounterclockwise west 12 NM to Broadway, N.C., thence SW 38 NM to Marston, N.C., thence E 26 NM to Rockish, N.C., thence NE 27 NM back to Lillington; Intensive training will be conducted W of V3E using eavy four engine transport and prop jet (C-124 and -130) acft, consisting of single, formation, and multile formation flights. These acft oper 2,000' and below nder VFR conditions, conducting low level (300' AGL o 2,000' MSL) runs in the maneuvering area described bove, for troop and cargo drops into R-5311. Similar perations are conducted in the vicinity of Mackall AF with drops at Mackall AAF.

OHIO

AMARILLO: Controlled Firing Area lctd 10 mi NE of end of NE/SW rnwy of Amarillo AFB/Mun: Lat 35°-21′09″, long 101°37′04″ E to 35°21′12″, 101°32′26″, S to 35°17′56″, 101°32′26″ W to 35°17′56″, 101°37′04″, N to point of beginning. Time of Use: 24 hrs per day. Altitudes: up to 3552′.

BEAUMONT, JEFFERSON CO. MUN ARPT: ADF 1, Amdt. 5, 16 May 64, Mitchell Int. to LOM (Final) 1400 vice 1000.

BIG SPRING: Due intsv jet tfc at Webb operg Mon-Fri during dalgt hrs it is suggested all acft operg VFR remain at or above 9000′ MSL when traversing area encompassed by 15 nmi arc of BGS VOR, excluding any overlap of V–66, including area W along V–16S to point 20 nmi SW of BGS VOR, and an extsn E to include area bounded N by S bndry of Trng Area Webb AFB/Reese Three, bounded S by N bndry of V–66, to N–S line drawn through town of Loraine, Tex. Concentrated jet trng within 10 nmi radius of Colorado City Aux Arpt lctd aprxly 38 nmi E Big Spring. VFR student jet tfc crossing airways within radius of 60 nmi BGS VOR utilizing appropriate VFR hemispherical crossing for tfc advisories.

BIG SPRING HAMILTON FLD: Caution, all alt 3,600′ MSL and above intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600′ MSL.

BIG SPRING HOWARD COUNTY ARPT. Caution, all alt 4,100′ MSL and above, intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600′ MSL.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200′ MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13–31 clsd ufn.

HONDO: Randolph AFB jet T-38 and T–33 acft will conduct acrobatic and transition flights within 15 mi radius of Hondo. Intensive touch and go landings Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. The acft practicing touch and go lndgs cntld by RSU on 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the east and fly N to S or S to N over bldgs next to ramp at 600′ above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit at 300′. Jets will orbit at 300′ MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barriers. Barriers will be lowered when trng is not in progress.

HOUSTON INTL ARPT: Inbnd flts ctc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° ctc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038–188° ctc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT: Microwave twr under cons 1400′ WSW 105′ AGL will be obstn lgtd and painted.

JOHNSON CITY ARPT TWR: Mobile twr uses freqs 236.6, 243.0, 126.2, 121.5 caretake status exists as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN (FORT HOOD), ROBERT GRAY AAF: VOR Procedure No. 1. Original, efctv 15 Feb 1962 and ADF Procedure No. 1, Original, efctv 28 March 1963 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controller airspace. This NOTA cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

LAREDO: Instv VFR jet trng conducted in Laredo control zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000′ MSL in this area. It this is not feasible ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; ctc on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

MIDLAND AIR TRML: Webb AFB T–38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS. Webb acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000′ MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

SAN ANTONIO, CAMP BULLIS: Controlled Firng Area as follows: A circular area 1¼ nmi in radius centered at lat 29°42′00″, long 98°33′50″. Altitude: surface to 3000′ MSL (1500′ AGL). Time and use: 0830 to 1730 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000′ MSL. Hvy conventional and jet instrument acft letdown and transition trng in SE quadrant btn V198 and V163W and V163W 60 nmi radius of Randolph Mon-Fri. VFR

jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR VFR penetrations and apcrs will be made from the La Vernia VOR to Randolph AFB. Should necessity dictate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS 31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

UTAH

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

SALT LAKE CITY MUNICIPAL AIRPORT NO. 1: ADF Proc. No. 1, Orig., efctv 3 Oct 64 is revised as follows: Altitude over LMM, 4862' vice 4626'. ADF Proc. No. 2, Orig., efctv 30 Mar 63 is cancelled, efctv 3 Oct 64.

SALT LAKE CITY MUN ARPT No. 1: ADF Proc No. 2 Orig. revised as follows, effective immediately: Rnwy 34L/R, straight-in minimums 600–1 all categories vice 400–1.

SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N, 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

753-036 O - 64 - III-9

VIRGINA

DAHLGREN: Restricted Area R 6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR SS, Mon-Fri.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.

WISCONSIN

JANESVILLE: Efctv Jan. 1, 1965, control zone Sun thru Fri 0700 to 2330 and Sat from 0700 to 2000 local time.

WASHINGTON

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extendin gfor aprxly 2000' due to construction on fld UFN.

Airman's INFORMATION MANUAL

SECTION III A

NOTICES TO AIRMEN

24 DECEMBER 1964

Section III–A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the AIM. It contains selected notices from the daily NOTAM Summary, Airman Advisories, new or revised Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

NOTE: Data printed entirely in bold face type are considered permanent and will usually be cited only once. Such information should be noted on charts and records. Temporary information is continuously cited until the condition is no longer in effect.

NOTE: Data is arranged in alphabetical order by State (and within the State by City or locality).

NEW OR REVISED DATA: New or revised data are indicated by underlining the first line of the affected item. The new information is not necessarily limited to the underlined portion, which is used only to attract attention to the new insert.

ALABAMA

BAYOU LA BATRE, FAY VIEW ARPT: Paved 3000' drag strip 75'S and parallel to turf rnwy. P-line each side of drag strip and wire across strip 75' from E end. N/S turf rnwy under constr, covered with stumps not to be used for acft operns.

BIRMINGHAM MUN ARPT: 833.5' (1810' MSL) lgtd TV twr constrd 5 nmi SSW (207°T) at lat 33°29'25.5" long 86°47'48".

CATHERINE, MARTIN FLD: Clsd until spring.

DOTHAN MUN ARPT: Rnwy 5–23 lgts permly discontinued.

FT RUCKER: Extsv IFR and VFR student trng conducted in area bounded by V–115 W, V–241 S, V–70 N and V–241 E. Normal hrs of operns 0600–2400 Mon-Fri from surface to 10,000'.

MOBILE, BROOKLEY AFB: Caution, effective immediately and until further notice all aircraft are warned of extensive high performance jet (F–105) traffic in the following area during dalgt hrs only: From the surface to 5000' MSL over the Mississippi Sound from a point 30°15'N, 88°04'W to a point 30°15'N, 88°50'W. Concerned aircraft will be flying a race track pattern between the above listed coordinates for the purpose of contour map/terrain avoidance radar calibration. Therefore, the pilots in the F–105 aircraft will be limited to the amount of visual surveillance they can give to air to air separation under VFR conditions.

SELMA CRAIG AFB: Extsv jet student trng conducted during dalgt hrs and occasional ngts Mon-Fri from surface to 6000' MSL. Craig ctl zone saturated dalgt hrs to 6000' MSL during student trng. VFR acft should contact Craig twr on 236.6 or 119.5 mc for tfc advisories. Craig Twr is avbl for lndg advisories for acft lndg Selfield. Clsd excp for ofl bus. clsd to transit aero club acft.

TANNON MUN ARPT: New. Lctd 4 mi S at lat 33°50'30", long. 88°07'00". Elev: 464. One rnwy 16–34. 3200 x 75' asphalt. Rnwy lgts operate dusk-dawn. FSS. Tuscaloosa.

ARIZONA

BOUSE ARPT: Clsd until aprxly March 1965.

CAREFREE ARPT: Ben inop UFN.

DOUGLAS, PUERTO CIELO ARPT: Closed to general public.

DUNCAN, LAZY B RANCH ARPT: Open to the public. Lctd 11 mi S at lat 32 33', long. 109 05'. Elev: 4135'. Two dirt rnwys 13–31 2200 x 35' and 7–25 1700 x 32'. Unattended.

FT HUACHUCA: See Yuma Special Notice.

GILA BEND: See Yuma Special Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

GRAY MOUNTAIN ARPT: Abandoned.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

MESA, FALCON FLD. Until Feb 20, 1965, small rocket test firing within one mile radius of a point 3 sml N maximum height 2,500 AGL. One day per week 1100 MST to 1500 MST. Contact Phoenix FSS for details.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hidensity jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the venty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Re-

quest all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12–30 is 2900'.

TUCSON, RYAN FLD: About Nov 16, all rnwys will be clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000' MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307. Efctv Jan. 15, 1964 to Jan 15, 1965 the flwg R–2308 Yuma East restricted area is established: Bndrys: beginning at 33°, 114°17'20"; thence N along State Highway 95 to 33°28', 114°13'; 33°24', 113°39'; 33°13'12", 113°21'36"; 33°07'17", 113°24'10"; 33°02', 113°33'50"; 33°02', 113°56'30"; 33°00', 114°11'; to point of beginning. Designated Altitudes: 1500' above the surface to 20,000' MSL. Time of Designation: Continuous, Jan. 15, 1964 to Jan. 15, 1965. Controlling Agency: Federal Aviation Agency, Los Angeles ARTC Center. Using Agency: Commanding Officer, Yuma Proving Ground, Yuma Ariz.

ARKANSAS

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

LOS ANGELES INTL ARPT: Beginning on or about Nov 25, a 90-day test will be conducted by the LAX FSS to evaluate the effectiveness of new concept in Transcribed Weather Broadcast script. The new concept will differ from the present procedures in that meteorological and Notice to Airmen data will be broadcast as applied to six commonly-travelled routes out of the Los Angeles Metropolitan Area. Enroute weather reports will follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes will be spoken. Dissemination will continue to be over the Los Angeles "Homer" on 332 kc; by telephone Spring 6–1640 or Spring 6-1641 and will additionally be fed into a special "listening-only" interphone circuit paralleling the present "fastline" circuit serving subscribers at Van Nuys Arpt; Lockheed Air Terminal in Burbank; San Fernando Arpt; Whiteman Arpk; in Pacoima and Rancho Conejo Arpt near Thousand Oaks. For the duration of the test period Weather Bureau pilot automatic telephone weather answering PATWAS will be discontinued, the two telephone numbers listed above are presently in use in the PATWAS program. As soon as practicable the other PATWAS telephone numbers Poplar 2–4111 and Davis 3–4626 will be connected to the Transcribed Weather Broadcast equipment. Until this is accomplished calls on these lines will be referred to the two Spring numbers.

MODESTO CITY-COUNTY ARPT: All pilots must ctc Stockton Apch Ctl prior to conducting IFR flight operns in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

POINT ARGUELLO: Civil acft desiring to transit W–532 call Navy Point Arguello on 122.5 mcs (guard 24 hrs) and listen for reply on 124.4 mcs.

RIVERSIDE MUN ARPT: Efctv Dec 10, 1964 Riverside control zone will be efctv from 0500 to 2130 local time. All pilots must contact March Apch Ctl prior conducting IFR flight operns in the Riverside control zone.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200' or slightly wider than standard ILS OM. During VOR outages or shutdowns for maintenance, flt checks reveal numerous usable signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

COLORADO

BROOMFIELD, JEFFERSON CO ARPT: First 3000' of rnwy 11 plus associated txwy clsd for resurfacing. us-

able length both directions 3000'. Ctc unicom for instructions.

DENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430-2330Z within a radius of 2500' of point lctd 104°41'11"W, 39°36'-30"N up to 1000' above surface.

EAGLE: Ctld firing for use of Camp Hale. Area is 5 nmi radius from point lat 39°27', long 106°19'20", max ordinate of firing 15,000' MSL. Time of use: continuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

PUEBLO: Controlled Firing (demolition) area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38°22'00"; E, long 104°21'22"; S, lat 38°18'00"; W, long 104°22'-50". Hrs of usage: 0900–1600 MST, Mon-Fri. Max alt 5000' above the surface.

CONNECTICUT

WATERBURY ARPT: Clsd.

DELAWARE

MIDDLETOWN, SUMMIT AIR PARK: E/W rnwy clsd until aprxly April 1965.

WILMINGTON, GREATER WILMINGTON AIRPORT: Proc. No. ILS-1, Amdt. 8, efctv 8 Aug 64. During the period of the West Chester VORTAC shutdown, the following temporary missed approach procedure will be in effect: If visual contact not established upon descent to authorized landing minimums, or if landing not accomplished, make climbing left turn to 1600' and return to Wilmington LOM. Hold South, one-minute right turns, inbound crs. 014 degrees.

DISTRICT OF COLUMBIA

WASHINGTON, MT VERNON: Low flying acft requested to avoid immediate vcnty Mt. Vernon estate lctd W bank Potomac River 10 mi S Washington Natl Arpt.

WASHINGTON NATIONAL ARPT: New helipad adj to txwys 1 and 8 comsnd for lndgs and tkofs. Helicopters using this pad will taxi to and from authorized parking areas. Use of grass area bounded by txwy 1 and txwy 11 and the Page refueling pad E of MATS tmnl no longer applicable.

WASHINGTON NATL ARPT: The Weather Bureau and the Federal Aviation Agency will jointly institute a runway visibility observation program for runways 18, 36 and 15. Whenever the runway visibility system serving runway 36 is inoperative with visibility one and one half mile or less or runways 18 and 15 are in use for landing aircraft and the visibility is at or below one and one half mile an observer will be stationed at the approach end of the landing runway and will report visibility values manually in one quarter mile increments. These values shall be used in conjunction with reported ceiling and will be mandatory for the runway being served and should not be construed as runway visual range (RVR) values.

WASHINGTON NATL ARPT: JET POLICY FOR WASHINGTON NATIONAL AIRPORT—Due to limited ground handling facilities at the Washington National Airport, flight operations of only those turbojet aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, only approved types of turbojet aircraft of short or medium range (1) are engaged in corporate, private charter or rental type operations, and (2) solely intend to utilize the Airport's General Aviation ground service facilities. B. Currently approved types of medium and short range turbojet aircraft are as follows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. Short or medium range turbojet aircraft of types not listed above must secure advance authorization from the Airport Manager. Requests for such authorization should be made at least 48 hours in advance of the planned aircraft arrival at the Airport. D. Because of limited capabilities, the Airport cannot accomodate operations of turbojet aircraft for proficiency or practice take-off or landings.

FLORIDA

TRIPS TO HAITI, PUERTO RICO AND DOMINICAN REPUBLIC SPECIAL NOTICE: Non-commercial acft are prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergency fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

COCOA, CENTRAL BREVARD COUNTY ARPT: Fld will be clsd until aprxly January 1965 for constr.

DESTIN ARPK: Clsd permly.

JACKSONVILLE, IMESON ARPT: Caution, all pilots making ILS apchs to arpt, a bridge lctd aprxly 1¼ mi SW of apch end of rnwy 5 lgtd very brightly at ngt, could give pilots false identification as being a rnwy especially during low ceilings or poor visibility conditions.

PENSACOLA: Intensive student conventional and jet VFR trng activity crossing V22 at 11,000' MSL btn Navy Saufley (NUN) VOR and Navy Whiting VOR 135 radial; and within a radius of 3 nmi Whiting NAAS and Saufley NAAS at and below 2500' MSL. Suggested alter course or altitude to avoid these areas. Radar VFR advisory service avbl on 119.0, 286.0 mc for acft eastbound or arriving from the E, or on 123.9, 281.8 for acft westbound or arriving from the west.

TAMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should ctc Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft rcvg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13–31 only rnwy in use. Threshold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1960'.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless otherwise authorized, no person may operate an aircraft in the air corridor between R-2915A, R-2915B and R-2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

GEORGIA

CARROLLTON MUN ARPT: Clsd for resurfacing.

NEW YORK

NEW YORK CITY: 1520' rotating bcn atop Empire State Bldg lctd aprxly 11 mi NW JFK Arpts opers on rotating basis dusk to midngt. From midngt to day break bcn in fixed position with light beamed directly S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effective August 1, 1964, Kennedy Tower will begin an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling reducing frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runway currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs, when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK, LA GUARDIA ARPT AREA: Tankers with mast exceeding 100' occasionally traversing Rikers Island ship channel creating obstruction to acft operg on rnwys 13-31 and 4-22. Ctl twr issuing advisory as to presence of tankers when info avbl.

NEW YORK, LA GUARDIA ARPT: FEE Clsd to jet propelled and motorless acft and acft over 105,000 lbs., unless prior permission of Arpt Mgr.

HONDO: Randolph AFB jet T-38 and T-33 acft will conduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs cntld by RSU freq 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 600' above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 300' MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress.

HOUSTON INTL ARPT: Inbnd flts etc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° etc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038-188° etc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT: Microwave twr under constr 1400' WSW 105' AGL will be obstn lgtd and painted.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1, Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controller airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

LA GRANGE, ROCKY CREEK RANCH ARPT: New. Lctd 5 mi NE at lat 29°55'35", long 96°48'10". Elev: 420'. One rnwy 18-36 3200 x 150 Asphalt.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000' MSL in this area. It this is not feasible, ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; rcv on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

MIDLAND AIR TRML: Webb AFB T-38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS, acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000' MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42'00", long 98°33'50". Altitude: surface to 3000' MSL (1500' AGL). Time and use: 0830 to 1200 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000′ MSL. Hvy conventional and jet instrument acrobatic and transition trng in SE quadrant btn V198 and V163 and V163W 60 nmi radius of Randolph Mon-Fri. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR/VFR penetrations and apcrs will be made from the La Vernia VOR to Randolph AFB. Should necessity dicate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

TEMPLE, DRAUGHON-MILLER ARPT: Clsd until aprxly Mar 1, 1965.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

UTAH

BRYCE CANYON ARPT: Rnwy clsd UFN acct snow.

DUCHESNE MUN ARPT: Lndg may be unsafe when snow covered. No snow removal eqpmt or svc, during winter months.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100′ higher than canyon rim.

GREEN RIVER ARPT: Rnwy lgts operg on prior request.

PRICE ARPT: Rnwy lgts on prior request.

SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10′N, 114°02′W, elevation 9104′ MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

ENOSBURG FALLS, ENOSBURG ARPT: New. Lctd 3 mi E at lat 44°55′20″, long 72°45′20″. Elev: 410′. One rnwy 2600 x 150 Gravel.

VIRGINA

DAHLGREN: Restricted Area R–6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR–SS, Mon-Fri.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08′16″, lat 38°44′26″. Rotary wing acft should avoid this area and fixed wing acft stay above 2000′. Extreme caution advised to all acft flying in area UFN.

FRONT ROYAL, STOKES FLD: Unattended until aprxly Mar 1, 1965.

MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.

RICHMOND, RICHARD E. BYRD FLYING FLD: Rnwy 15–33 avbl only to scheduled DC–7, DC–6, turbo jet and local based military jet acft with prior arrangement with twr.

WASHINGTON

The following is a list of flds that are clsd November–May due to winter elements: Bandera Arpt; Easton Arpt; Enumclaw, Ranger Creek Arpt; Laurier, Avery Arpt; Leavenworth, Lake Wenatchee Arpt; Lester Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.

AUBURN EVERGREEN ARPT: Abandoned.

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000′ from approach end and extendin gfor aprxly 2000′ due to construction on fld UFN.

RENTON MUN ARPT TWR: Lgt gun signals not visible 195–300° at 1000′ MSL beyond 2 mi.

SEATTLE: Hi alt jet route J96–505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

WEST VIRGINIA

CLARKSBURG, BENEDUM ARPT: Constr in progress rnwy 13–31, unlgtd.

WISCONSIN

CAMP DOUGLAS: Control area extension effective March 24, 1964 until further notice.

JANESVILLE: Efctv Jan. 1, 1965, control zone Sun thru Fri 0700 to 2330 and Sat from 0700 to 2000 local time.

NEW RICHMOND MUN ARPT: New. Lctd 1 mi at lat 45°09 long 92°32′. Elev: 995′. One rnwy asphalt NW/SE 3000 x 78. Rnwy lgts dusk-dawn. 100/130 fuel. Unattended.

WYOMING

DULL CENTER/DOUGLAS/SADLER ARPT: Abandoned.

LANCE CREEK, COW CREEK ARPT: Abandoned.

A.I.M. CORRECTIONS

AGE I-4

0. The list of airborne check points and ground check points is published in Section III. VOT's are included with the airport information in Section IV A.

AGE I-5:

VOR Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

The terms VOR, VORTAC, and TACAN are, operationally, general terms covering the VHF and UHF omnidirectional bearing type of facilities without regard to the fact that the power, the frequency protected area, the equipment configuration, and operational requirements may vary between the facilities at different locations.

The table below lists the intended operational service volume or volumes of the various categories of VOR's, VORTAC'S, and TACAN's. Below 18,000 feet msl, the operational service volume of the H class facility has been limited to the L class service volume due to signal coverage characteristics of VHF and UHF facilities at the lower altitudes. T class facilities provide terminal service at locations where it is not practicable to provide L class frequency protection. Normal signal coverage and interference free service may be expected within the operational service volume unless specific facility restrictions have been imposed. Use of these facilities for IFR operations outside of the operational service volume without additional flight inspection it not intended and may result in undependable or inadequate indications in the cockpit.

Class of VOR, VORTAC, or TACAN	Operational Service Volume
(Terminal)	25 nmi up to 12,000′ msl
(Low altitude)	40 nmi up to 18,000′ msl
(High altitude)	40 nmi up to 18,000′ msl 130 nmi from 18,000′ msl 45,000′ msl 100 nmi above 45,000′ msl

GE II-3—PARAGRAPH 3. DIRECT FLIGHTS.

b. The azimuth feature of VOR aids and the azimuth and distance (DME) features of VORTAC/TACAN aids are assigned certain frequency protected areas of airspace which are intended for application to established airway and route use, and to provide guidance for planning flights outside of established airways or routes. These areas of airspace are expressed in terms of cylindrical service volumes of specified dimensions called "class limits" or "categories." An operational service volume has been established for each class in which adequate signal coverage and frequency protection can be assured. To facilitate use of VOR, VORTAC or TACAN aids, consistent with their operational service volume limits, pilot use of such aids for defining a direct route of flight in controlled airspace should not exceed the following:

PAGE II-19—MILITARY CLIMB CORRIDOR RESTRICTED AIRSPACE.

The procedures in this paragraph become effective on January 7, 1965.

Change title to read: "RESTRICTED AIRSPACE".

PAGE III-46—CHANGE OIL BURNER ROUTE "CLEAR VIEW"

Change the following paragraph:

Effective December 24, 1964

Route Width—The route width from 39°31′N, 99°34′W to the route exit point is 5 SM on the west and north side of the route centerline and 10 SM on the east and south side of the route centerline.

PAGE III-53—CHANGE OIL BURNER ROUTE "POOL SHARK"

Effective January 4, 1965

1st paragraph line 12—"direct 41°07′N, 103°39′W; then descend direct to cross 41°03′N 103°35′W at 6100′ MSL; then 6100′ MSL direct to 40°27′N, 102°57′W then descend direct so as to cross 40°25′N 102°55′W at 5800′ MSL then at 5800′ MSL direct to 40°20′N, 102°49′W; then 5800′ MSL direct 39°47′N, 102°49′W; then 5800′ MSL direct 39°05′N, 102°33′W."

PAGE I-36:

Under Vertigo, delete last sentence, "If the beacon ------ etc".

PAGE II-18:

AIRCRAFT CLIMBING/DESCENDING Add new paragraph:

d. If it necessary during a climb or descent to level off at an intermediary altitude, advise ATC.

PAGE II–8:

Under 3. STANDARD INSTRUMENT DEPARTURES (SIDs) add: paragraph d. "It will be the responsibility of each pilot to accept or refuse the clearance issued." Change present d. to e.

PAGE II–16:

HOLDING—Revise paragraph 6, last sentence to read: "Where the fix is associated with an instrument approach, and timed approaches are in effect, a procedure turn shall not be executed unless the pilot advises ATC, since aircraft holding are expected to proceed inbound on final approach directly from the holding pattern when approach clearance is received."

PAGE II–20:

COMMUNICATIONS, 1. g., after the example add the following:

NOTE—Pilots in Alaska, Hawaii, U.S. Territories and possessions, operating at or above flight level 240 and who have requested and received a clearance specifying "VFR Conditions On Top" are requested to report their "actual" altitude as part of their IFR position reporting procedure and advise ATC prior to making an altitude change.

PAGE II–22:

Add the following:

SPECIAL USE AIRSPACE

1. It is mandatory that pilots avoid unauthorized operation in prohibited areas and restricted areas and extremely important that warning areas not be penetrated unless prior approval has been obtained. The following explanation is to impress on all concerned the purpose of such areas and indicate that hazards are presented by activities within restricted and warning areas. Caution and intensive student jet training areas contain activity of interest to the nonparticipating pilot. The operations conducted within these areas are not considered hazardous and consist primarily of high volume military training. These five types of airspace are depicted on aeronautical charts published by the Coast and Geodetic Survey.

   a. **Prohibited Area.** Airpsace identified by an area on the surface of the earth within which the flight of aircraft is prohibited. Such areas are established for security or other reasons associated with the national welfare. These areas are published in the Federal Register.

   b. **Restricted Area.** Airspace identified by an area on the surface of the earth within which the flight of aircraft, while not wholly prohibited, is subject to restrictions. Activities within these areas must be confined because of their nature or limitations imposed upon aircraft operations that are not a part of those activities or both. Restricted areas denote the existence of unusual, often invisible, hazards to aircraft. Penetration of restricted areas during periods of activity may be extremely hazardous to the aircraft and its occupants. Restricted areas are published in the Federal Register and constitute Part 73 of the Federal Aviation Regulations.

   c. **Warning Area.** Warning areas are established beyond the three-mile limit. They are areas of defined dimensions established to contain both visible and invisible hazards to nonparticipating aircraft. Though the activities within the warning areas are as hazardous as those contained within restricted areas, warning areas cannot be legally designated because they are over international waters. Penetration of warning areas during periods of activity may be hazardous to the aircraft and its occupants. Official descriptions of warning areas may be obtained upon request to the FAA, Washington, D.C.

   d. **Caution Area.** Areas of defined dimensions within which the military training activities conducted, though not hazardous, are of interest to nonparticipating pilots. There are no restrictions applicable to flight within these areas. Information concerning these areas may be obtained upon request to the FAA, Washington, D.C.

   e. **Intensive Student Jet Training Area (ISJTA).** These areas are depicted on aeronautical charts to identify airspace utilized by the military for the intensive training of student jet pilots. There is no restriction to VFR flight in these areas. Information on these training areas may be obtained from any FSS within 100 miles of the area.

PAGE II–25:

Change the material under RADAR TRAFFIC INFORMATION SERVICE, subparagraph c. "Issuance of Traffic Information" as follows:

   c. **Issuance of Traffic Information**—Traffic information will include the following concerning a target which may constitute traffic for an aircraft that is:

      (1) Radar identified:
         (a) Azimuth from the aircraft in terms of the twelve hour clock;
         (b) Distance from the aircraft in nautical miles;
         (c) Direction in which the target is proceeding; and
         (d) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffic; i.e., slow or fast moving.

         Example:

         Traffic 10 o'clock, 3 miles, west-bound (type aircraft and altitude, if known or relative speed of the observed traffic). The pilot may, upon receipt of traffic information, request a vector (heading) to avoid such traffic. The vector will be provided to the extent possible as determined by the controller.

(2) Not radar identified:
   (a) Distance and direction with respect to a fix;
   (b) Direction in which the target is proceeding; and
   (c) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffi, i.e., slow or fast moving.
   Example:
   Traffic 8 miles out of the airport northeast-bound, (type aircraft and altitude or relative speed of the observed traffic).

AGE II–25:

Change the material under TERMINAL RADAR ERVICE as follows:

TERMINAL RADAR SERVICE

Provided in designated Terminal Radar Service reas, TRSA).

. This service has been implemented at certain terminal locations and is provided on a voluntary pilot participating basis.

. The purpose of this service is to provide, to the extent possible separation between all participating VFR aircraft and all IFR aircraft operating within the airspace defined as the TRSA.

The TRSA is primarily a radar environment and control is predicated thereon, however, this does not preclude application of nonradar separation when required or deemed appropriate. During weather conditions equal to or better than basic VFR:

(a) 500 feet vertical separation may be used between VFR aircraft and/or between VFR and IFR aircraft.

(b) Visual separation may be used between VFR aircraft and/or between VFR and IFR aircraft when the pilot sees the other aircraft and reports he will maintain visual separation from it.

Within the TRSA traffic information on observed but unidentified targets will, to the extent possible, be provided all IFR and participating VFR aircraft and such aircraft, at the request of the pilot, will be vectored to provide standard radar separation from the observed traffic, insofar as possible.

GE II–30.

Paragraph 4. Change the last line to read "above the port traffic area."

PAGE II–26.

Effective Jan 7, 1965 revise the material under APPROACH CONTROL a. Radar Approach Control, subparagraphs (2) and (3) and add new (4) as follows:

(2) IFR aircraft may be descended to the minimum vectoring altitude, vectored to a position in the airport traffic pattern and cleared for a "visual approach" whenever the reported ceiling is at least 500 feet above the minimum vectoring altitude and the visibility is three miles or more. With a "visual approach" clearance, the pilot operating on an IFR flight plan may deviate from the prescribed instrument aproach procedure and proceed to the airport with visual reference to the surface, maintaining VFR conditions at all times. This procedure will afford a more expeditious service to arriving aircraft and preclude unnecessary vectoring in the final approach course of a published instrument approach procedure.

(3) Clearance for a visual approach is issued when:
   (a) The pilot of an aircraft not following a preceding aircraft reports sighting the airport and the tower controller has the aircraft in sight, or
   (b) An aircraft is positioned behind a preceding aircraft and the pilot of the succeeding aircraft reports sighting that aircraft.

(4) Radar separation is provided from any preceding IFR aircraft until the clearance for a visual approach is issued. Pilots cleared for a visual approach are reminded to advise ATC whenever they are unable to continue following the preceding aircraft and/or they encounter less than basic VFR weather conditions. Radar service will be terminated when the pilot is told to contact the tower. The tower will assign a landing sequence number.

Airman's INFORMATION MANUAL

SECTION III A

NOTICES TO AIRMEN

7 JANUARY 1965

Section III—A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the A. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or re-ed Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

E: Data printed entirely in bold face type are considered permt and will usually be cited only once. Such information ld be noted on charts and records. Temporary information is nuously cited until the condition is no longer in effect.

E: Data is arranged in alphabetical order by State (and within State by City or locality).

' OR REVISED DATA: New or revised data are indicated by rlining the first line of the affected item. The new information t necessarily limited to the underlined portion, which is used to attract attention to the new insert.

ALABAMA

OU LA BATRE, BAY VIEW ARPT: Paved 3000' ag strip 75'S and parallel to turf rnwy. P-line each le of drag strip and wire across strip 75' from E end. S turf rnwy under constr, covered with stumps not be used for acft operns.

HERINE, MARTIN FLD: Clsd until spring.

AN MUN ARPT: Rnwy 5—23 lgts permly discontinued.

RUCKER: Extsv IFR and VFR student trng conted in area bounded by V-115 W, V-241 S, V-70 N d V-241 E. Normal hrs of operns 0600–2400 Mon-Fri m surface to 10,000'.

ILE, BROOKLEY AFB: Caution, effective immedily and until further notice all aircraft are warned extensive high performance jet (F-105) traffic in the lowing area during dalgt hrs only: From the sure to 5000' MSL over the Mississippi Sound from a nt 30°15'N, 88°04'W to a point 30°15'N, 88°50'W. ncerned aircraft will be flying a race track pattern ween the above listed coordinates for the purpose of tour map/terrain avoidance radar calibration. erefore, the pilots in the F-105 aircraft will be ited to the amount of visual surveillance they can e to air to air separation under VFR conditions.

IA CRAIG AFB: Extsv jet student trng conducted ing dalgt hrs and occasional ngts Mon-Fri from sure to 6000' MSL. Craig ctl zone saturated dalgt hrs to 0' MSL during student trng. VFR acft should con: Craig twr on 236.6 or 119.5 mc for tfc advisories. lg Twr is avbl for lndg advisories for acft lndg Sel. Clsd excp for ofl bus. clsd to transit aero club acft.

N MUN ARPT: New. Lctd 4 mi S of lat 33°50'30", . 88°07'00". Elev: 464. One rnwy 16—34. 3200 x 75' halt. Rnwy lgts operate dusk-dawn. FSS. Tuscaloosa.

ARIZONA

E ARPT: Clsd until aprxly March 1965.

FREE ARPT: Bcn inop UFN.

AS, PUERTO CIELO ARPT: Closed to general public.

DUNCAN, LAZY B RANCH ARPT: Open to the public. Lctd 11 mi S at lat 32°33', long. 109°05'. Elev: 4135'. Two dirt rnwys 13–31 2200 x 35' and 7–25 1700 x 32'. Unattended.

FT HUACHUCA: See Yuma Special Notice.

GILA BEND: See Yuma Special Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

GRAY MOUNTAIN ARPT: Abandoned.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

MESA, FALCON FLD. Until Feb 20, 1965, small rocket test firing within one mile radius of a point 3 smi N maximum height 2,500 AGL. One day per week 1100 MST to 1500 MST. Contact Phoenix FSS for details.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hidensity jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson,

Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12–30 is 2900′.

TUCSON, RYAN FLD: About Nov 16, all rnwys will be clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307. Efctv Jan. 15, 1964 to Jan 15, 1965 the flwg R–2308 Yuma East restricted area is established: Bndrys: beginning at 33°, 114°17′20″; thence N along State Highway 95 to 33°28′, 114°13′; 33°24′, 113°39′; 33°13′12″, 113°21′36″; 33°07′17″, 113°24′10″; 33°02′, 113°33′50″; 33°02′, 113°56′30″; 33°00′, 114°11′; to point of beginning. Designated Altitudes: 1500′ above the surface to 20,000′ MSL. Time of Designation: Continuous, Jan. 15, 1964 to Jan. 15, 1965. Controlling Agency: Federal Aviation Agency, Los Angeles ARTC Center. Using Agency: Commanding Officer, Yuma Proving Ground, Yuma Ariz.

ARKANSAS

JACKSONVILLE, BOND ARPT: Open to the public. Lctd adj NW at lat 34°53′, long. 92°07′. Elev: 300′. One rnwy 1650 x 150′ turf. Rnwy 35 apch restricted by pole line glide angle 1 to 1. Associated FSS Pine Bluff.

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

WARREN MUN ARPT: New. Lctd 3 mi S at lat 33°33′50″, long 92°05′00″. Elev: 234. One rnwy 3–21 2900 x 50′ asphalt. Low intensity rnwy lgts and rotating bcn operg dusk-dawn. Shoulders soft after hvy rains. Associated FSS El Dorado.

CALIFORNIA

AMBOY, ROY ARPT: Closed to the general public.

CORNING MUN ARPT: Clsd until aprxly Feb 10.

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EUREKA KNEELAND ARPT: New. Lctd 12 mi SE at lat 40°43′10″, long. 123°55′35″. Elev: 2724′. One rnwy 15–33 2200 x 100′ gravel. Ctn ground drops off sharply 11′ from each end of rnwy. Arpt unattended.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

Hold South, one-minute ht turns, inbound crs. 014 degrees.

DISTRICT OF COLUMBIA

SHINGTON, MT VERNON: Low flying acft requested avoid immediate vcnty Mt. Vernon estate lctd W bank tomac River 10 mi S Washington Natl Arpt.

INGTON NATIONAL ARPT: New helipad adj to txwys 1 1 8 comsnd for lndgs and tkofs. Helicopters using this pad l taxi to and from authorized parking areas. Use of grass a bounded by txwy 1 and txwy 11 and the Page refueling l E of MATS tmnl no longer applicable.

HINGTON NATL ARPT: The Weather Bureau and Federal Aviation Agency will jointly institute a runy visibility observation program for runways 18, 36 l 15. Whenever the runway visibility system serving nway 36 is inoperative with visibility one and one half e or less or runways 18 and 15 are in use for landing craft and the visibility is at or below one and one f mile an observer will be stationed at the approach l of the landing runway and will report visibility ues manually in one quarter mile increments. These ues shall be used in conjunction with reported ceil- and will be mandatory for the runway being served l should not be construed as runway visual range VR) values.

HINGTON NATL ARPT: JET POLICY FOR ASHINGTON NATIONAL AIRPORT—Due to ited ground handling facilities at the Washington National Airport, flight operations of only those turbojet aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, only approved types of turbojet aircraft of short or medium range (1) are engaged in corporate, private charter or rental type operations, and (2) solely intend to utilize the Airport's General Aviation ground service facilities. B. Currently approved types of medium and short range turbojet aircraft are as follows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. Short or medium range turbojet aircraft of types not listed above must secure advance authorization from the Airport Manager. Requests for such authorization should be made at least 48 hours in advance of the planned aircraft arrival at the Airport. D. Because of limited capabilities, the Airport cannot accomodate operations of turbojet aircraft for proficiency or practice take-off or landings.

FLORIDA

TRIPS TO HAITI, PUERTO RICO AND DOMINICAN REPUBLIC SPECIAL NOTICE: Non-commercial acft are prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergencvy fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

COCOA, CENTRAL BREVARD COUNTY ARPT: Fld will be clsd until aprxly January 1965 for constr.

DESTIN ARPK: Clsd perml y.

GAINSVILLE, STENGEL FLD: 670' (849' MSL) lgtd TV twr constrd 4.5 nmi N (351° T) at lat 29°42'34", long 82°23'34".

JACKSONVILLE, IMESON ARPT: Caution, all pilots making ILS apchs to arpt, a bridge lctd aprxly 1¼ mi SW of apch end of rnwy 5 lgtd very brightly at ngt, could give pilots false identification as being a rnwy especially during low ceilings or poor visibility conditions.

LEE, SEARCYS AIRSTRIP: New. Lctd 2 mi NW at lat 30°26'50", long 83°18'40". Elev: 150'. One rnwy 9-27 3300 x 100' turf. Rnwy 9 apch restricted by p-line.

PENSACOLA: Intensive student conventional and jet VFR trng activity crossing V22 at 11,000' MSL btn Navy Saufley (NUN) VOR and Navy Whiting VOR 135 radial; and within a radius of 3 nmi Whiting NAAS and Saufley NAAS at and below 2500' MSL. Suggested alter course or altitude to avoid these areas. Radar VFR advisory service avbl on 119.0, 286.0 mc for acft eastbound or arriving from the E, or on 123.9, 281.8 for acft westbound or arriving from the west.

TAMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should ctc Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft rcvg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13-31 only rnwy in use. Threshold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1960'.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless other-

wise authorized, no person may operate an aircraft in the air corridor between R–2915A, R–2915B and R–2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

LAS VEGAS: Hi-density jet tfc: Pilots on other tha IFR clearance should either avoid or use extrem caution when traversing the following areas with which Nellis AFB hi-density jet tfc is operg. Hou of Operation: 0600–1800 local time, Monday thru Sun day, continuous daily at 9000′ MSL and below with a 5 mi radius of Nellis AFB. Surface to 23,000′ MS within fig boundaries: 36°42′, 115°18′; 36°42′, 114°3 36°26′25″, 114°52′15″; 36°23′30″, 114°48′20″; 3 27′30″, 114°31′; 36°24′50″, 114°25′10″; 36°30′, 11 15′40″; 36°32′, 114°12′; 35°56′, 114°12′; 35°56′, 11 45′30″; 36°07′, 115°50′; 36°41′, 115°50′; 36°41′, 11 42′; 36°35′, 115°42′; 36° 35′, 115°37′45″; 36°26′, 11 23′25″; 36°26′, 115°18′; to point of beginning. F 5500′ MSL and 23,000′ MSL within the fig boundarie 36°07′, 115°50′; 36°41′, 115°50′; 36°41′, 115°42′; 36°3 115°42′; 36°35′, 115°37′45″; 36°26′, 115°23′25″; 36°2 25″, 115°23′25″; SE along US 95 to 36°14′20″, 115°1 west to closest 5000′ elev line at 36°13′, 115°22′; S along 5000′ elevation line to 36°08′50″, 115°30′; point of beginning. Surface to 23,000′ MSL with fig boundaries: 36°42′, 115°18′; 36°26′, 115°23′25 36°23′25″, 115°23′25″, SE along US 95 to 36°14′2 115°14″; 36°13′, 115°07′30″; clockwise along NW ed of a 5-mile circle around Nellis AFB to 36°15′3 115°07′45″; 36°31′, 114°56′40″; 36°34′30″; 114°4 30″; 36°42′, 114°32′; to point of beginning. Btn 90 MSL and 9000′ MSL within fig boundaries: 36°3 114°56′40″; 36°42′, 114°12′; 36°32′, 114°12′; 36°2 30″, 114°48′20″; to point of beginning. Btn 1000 MSL and 23,000′ MSL within fig boundaries: 36°1 20″, 115°14′; west to closest 5000′ elevation line 36°13′, 115°22′, SW along the 5000′ elevation line 36°08′50″, 115°30′; 36°10′, 115°10′; to point of beg ning. Surface to 9000′ MSL within fig boundarie 36°15′30″, 115°07′45″; 36°31′, 114°56′40″; 36°23′30 114°48′20″; 36°12′, 114°58′; clockwise along sout edge of Nellis AFB Control Zone to point of begin

Suggested arrival and depature route NE of Las Vegas: remain E of the 025 radial of LAS VORTAC and outer limits of Nellis AFB ctl zone at or below 7000' MSL Frequent violations reported of Restricted Area R-4808 NW of Las Vegas. This area extremely hazardous to intruding aircraft. All civil acft warned to keep clear of this area. Caution in ctl zone area, tow-target patn between Nellis AFB and a point 8.7 nmi N of Nellis AFB descending from 10,000'.

NEW HAMPSHIRE

OLEBROOK ARPT: New. Lctd ¼ mi W at lat 44°53'21", long 71°30'28". Elev: 1010'. One rnwy 4–22 2500 x 100 turf. P-line and rdo ant 75' hi, 1000' N of arpt. 80/87 fuel. Unattended.

ILMANTON IRON WORKS, BESSE FLD: Clsd during winter months.

LAN, PONTOOK ARPT: New. Lctd 11 mi SSW at lat 44°38', long 71°15'. Elev: 1165'. One rnwy E/W 1800 x 75 Turf. Trees and P-line NE. Unattended.

ASHUA RDO: Non-Federal MHW facil comsnd for public use. Freq: 260 kc. Ident: AMH. Lctd at lat 42°49'05", long 71°35'35". Owned and operd by New Hampshire Aero Commission.

NEW JERSEY

TLANTIC CITY NAFEC/ATLANTIC CITY (POMONA) ARPT TWR: Experimental DME rnwy 13 ILS operg channel 30, freq 991 mc ident: XAB comments required.

OVER: Picatinny Arsenal: ctld firing area 3 mi wide extending from Dover to point 11 mi N. Area centers on railroad running N from Dover. Mortar firing and demolition blasts surface to 7000' MSL. Prior entering area ctc Teterboro Rdo.

EAN CITY ARPT: Clsd until Spring, 1965.

RENTON, MERCER COUNTY ARPT: Rnwy 6–24 clsd until aprxly Dec 31. May be used as txwy only during this period.

EST MILFORD, GREENWOOD LAKE ARPT: Arpt will be unattended Christmas Day, New Years Day, Easter Sunday and Thanksgiving Day.

NEW MEXICO

AMOGORDO MUN ARPT: Pole 1200' from apch end rnwy 16.

BUQUERQUE: Controlled firing will be conducted periodically and on a continuing basis at a point aprxly 5 mi E of Albuquerque Homing facil and 8 mi SE of E end of rnwy 8 Kirtland AFB. Ctc Albuquerque FSS or twr for time and avoidance area.

BUQUERQUE: "Cratering—uncased explosives" tests will be conducted 0700–1000M daily excp Sat and Sun. These ctld firings are conducted only during VFR weather conditions and lctd aprxly 8 mi SSE Kirtland AFB at lat 34°57'30", long 106°33'45". Soil clods may be thrown to a radius of 1000'.

OMFIELD, BRETHERN IN CHRIST MISSION ARPT: Clsd to public use.

AN, UTE DAM ARPT: New. Lctd 2 mi W of lat 35°21'45", long 93°26'30". Elev: 3800'. One rnwy 2–20 3700 x Dirt. Rnwy 20 apch restricted by P-line. Glide angle 1 to 1. Rough with gravel on rnwy.

S ALAMOS: Use of the airstrip at Los Alamos is limited to official purposes of the US Atomic Energy Commission and emgcy lndgs. Any unauthorized use will be considered trespass. Any lndgs on the Los Alamos Arpt, or other use of its facilities, by a private pilot who does not have written permission from the Atomic Energy Commission, shall be deemed for all purposes to be (1) an assumption of all risks and liabilities by such pilot in connection with his use of the Los Alamos Arpt, (2) a recognition and agreement that neither the United States of America, its cost-type contractors, or their officers, agents or employees has any obligation to such pilot to operate and/or maintain the airport or its facilities in a safe manner or condition, and (3) an agreement to sign a document reflecting the foregoing.

RATON, LA MESA PARK AIRSTRIP: New. Lctd adj SW at lat 36° 52', long 104°27'. Elev: 6500'. Two rnwys Turf N/S 5000' and NE/SW 3500.

NEW YORK

HORSEHEADS, OMNI ARPT: New. Lctd 5 mi N. at lat 42°14', long 76°51'. Elev: 940'. One rnwy N/S 1850 x 1500 Turf. Unattended.

ITHACA, McPHERSON SEAPLANE BASE: Open to public. 80/87 fuel. Major A and P repairs. Unattended.

NEW YORK CITY: 1520' rotating bcn atop Empire State Bldg lctd aprxly 11 mi NW JFK Arpts opers on rotating basis dusk to midngt. From midngt to day break bcn in fixed position with light beamed directly S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effective August 1, 1964, Kennedy Tower will begin an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling reducing frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runway currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs, when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay ,and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK, LA GUARDIA ARPT AREA: Tankers with mast exceeding 100′ occasionally traversing Rikers Island ship channel creating obstruction to acft operg on rnwys 13–31 and 4–22. Ctl twr issuing advisory as to presence of tankers when info avbl.

NEW YORK, LA GUARDIA ARPT: FEE Clsd to jet propelled and motorless acft and acft over 105,000 lbs., unless prior permission of Arpt Mgr.

PENN YAN ARPT: Rnwy is hard surfaced (asphalt).

RED HOOK, SKY PARK ARPT: New. Lctd 2 mi E. at lat 41°59′, 73°50′. Elev: 3200′. One rnwy N/S 3600 x 100 Gravel. Low intensity rnwy lgts by Unicom req. 80/87, 100–130 fuel. Minor A and P repairs.

ROMULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350′ radius centered at lat 42°46′59″N and long 76°53′06″W. Demolition activities in the area will go no higher than 2000′ MSL and only when ceiling of 5000′ or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

SHIRLEY, BROOKHAVEN ARPT: New rnwy 6–24 completed to 4200′ asphalt.

TICONDEROGA ARPT: Clsd for duration winter season.

WATERTOWN MUN ARPT: Rnwy 1–19 clsd to all operns UFN. Will not be maintained during winter months.

NORTH CAROLINA

CLINTON ARPT: Abandoned.

CLINTON, SAMPSON COUNTY ARPT: New. Lctd 3 mi SW at lat 34°58′48″, long 78°21′48″. One rnwy 6–24 3600 x 250 Turf. Major A and P repairs. 80/87 and 100/130 fuel.

ELIZABETH CITY MUN ARPT: Due to heavy VFR GCA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth City Mun arpt contact Elizabeth City Coast Guard twr on 126.2 mc for tfc information. Acft without radio enter 500′ pattern from the west.

FAYETTEVILLE, POPE AFB: Extensive operns to 2,000′ MSL 1200–2200Z Mon thru Fri. Pilots of all acft are advised that in an area from Lillington, N.C., north along arwy V3E 6 NM to Chalybeate, N.C., counterclockwise west 12 NM to Broadway, N.C., thence SW 38 NM to Marston, N.C., thence E 26 NM to Rockfish, N.C., thence NE 27 NM back to Lillington; intensive training will be conducted W of V3E using heavy four engine transport and prop jet (C–124 and C–130) acft, consisting of single, formation, and multiple formation flights. These acft oper 2,000′ and below under VFR conditions, conducting low level (300′ AGL to 2,000′ MSL) runs in the maneuvering area described above, for troop and cargo drops into R-5311. Similar operations are conducted in the vicinity of Mackall AAF with drops at Mackall AAF.

HICKORY MUN ARPT: Rnwys 1–19 and 11–29 clsd due constrn.

WHITEVILLE MUN ARPT: New. Lctd 3 mi SE at lat 34°16′23″, long 78°42′52″. Elev: 80′. One rnwy 5–23 3400′ Turf. 80/87 Fuel. Attended daily, Sat PM and Sun.

NORTH DAKOTA

GARDNER, DEWDROP ARPT: New. Lctd 5 mi E at lat 47°09′, long 96°52′. Elev: 890′. One rnwy E/W 3000 x 100 Turf. Unattended.

GRAFTON. JOHNSON ARPT: Open to public at pilots risk. Lctd 5.6 mi NNE at lat 48°29′, long 97°22′. Elev: 835′. One rnwy N/S 1500 x 36 Turf. N apch restricted by p-line.

LUCCA, LINDEMANN ARPT: Open to public. Lctd 8.7 mi ESE at lat 46°42′, long 97°43′. Elev: 1110′. One rnwy NW/SE 2100 x80 Turf. Minor A repairs only. 80/87 fuel. Unattended.

MADDOCK, RICES ARPK: New. Lctd adj SW at lat 47°57′33″, long 99°32′11″. Elev: 1550′. Two rnwys N/S 2600 x 80 Turf; NW/SE 2000 x 80 gravel. Minor A and P repairs 80/87 fuel. Unattended.

UNDERWOOD MUN ARPT: Reactivated. Lctd 1 mi N. at lat 47°27′, long 101°08′. Elev: 2030′. One rnwy NW/SE 2600 x 100 Turf. Unattended.

OHIO

ATHENS RDO: Non-federal Rbn comsnd, freq 206 kc ident: UOA. Lctd lat 39°20′11″, long 81°58′25″. 272 4.4 from rnwy 27 Ohio University Arpt. Class: MHW. Facility owned and operated by Ohio University.

BELLE FONTAINE, TANGER ARPT: Abandoned.

BRYAN, WILLIAMS COUNTY ARPT: Open to public. Lctd 3 mi ESE. Elev: 730′. One rnwy 7–25 3000 x 50 Asphalt, with 700′ overrun at NE end. Low intensity rnwy lgtd opsg dusk-dawn. 80/87 and 100/130 Fuel. Attended 0800–2200 Mon–Fri; 0800–1700 Sat, Sun.

CINCINNATI: Moored mrkd balloon will be flown day or ngt up to an alt 1500′ MSL. Site of operns 7½ mi NE Greater Cincinnati Arpt and 6½ mi W Lunken Arpt. Balloon will be tethered aprxly ½ mi W of Cincinnati Union Trml Bldg.

ELYRIA, HILL ARPT: New. Lctd 2.7 mi SE at lat 41°19′54″, long 82°05′00″. Elev: 760′. One rnwy 9–27 2540 x 70 Turf. P–line W, Trees E. Minor A and P repairs. Unattended.

HAMILTON RDO: Non-federal H fac comsnd. Ident: HAO, freq 260 kc. Class: MHW. Lctd lat 39°22′18′, long 84°34′03″. Variation 0°.

LAKE MILTON, KOASIS RESORT ARPT: Clsd until further notice.

LEXINGTON, ROSS FIELD: New. Lctd 4 mi W at lat 40°41′11″, long 82°40′00″. Elev: 1415′. One rnwy N/S 2300 x 75 Turf. 80/87 Fuel.

RAVENNA ARSENAL (APCO): Ctld firing for demolition purposes, when wea permits, during regular working hrs, Mon-Fri within the following area bounded on S by lat 41°11′30″, on N by lat 41°12′30″, E long 81°04′22″; W long 81°06′14″. Demolition activities in this area will go no higher than 5000′ MSL and only when ceiling of 10,000′ or better and vsby 3 mi or more. Notams regarding activities conducted will be filed with FSS Akron Mun Arpt (telephone STadium 4–1246).

OLEDO MUN ARPT: Clsd Suns to all itinerant acft btn 1400–2300 due to drag races all rnwys UFN.

OKLAHOMA

FTON, BIRKS ARPT: New. Lctd 0.3 mi NE at lat 36°42'30", long 94°56'15". Elev: 780'. One rnwy 5–23 1960 x 120 Turf. Rough, soft when wet. Cattle on fld.

ROKEN ARROW, FUNK ARPT: New. Lctd 3 nmi NE. Elev: 750'. One rnwy 17–35 2500 x 150 Turf. Rnwy 35 apch restricted by P-line. Glide angle 1 to 1.

HICKASHA, SW TOLL ROAD ARPT: New. Lctd 3.5 mi E at lat 35°04'56", long 97°53'15", Elev: 1185'. One rnwy 2–20 2700 x 200 Turf. Rnwy 2 apch restricted by road. Glide angle 1 to 1. 80/87 fuel only. Unattended.

NID: Efctv Nov 15, 1964 ctl zone times will be 0700–1500 local time Mon thru Thurs 0700–2200 local time Fri, from 0800–1600 local time Sat, and 1200–1800 local time Suns. Control zone not designated on holidays.

NID: **Mon-Fri during daigt hrs, in addition to intsv student jet operations being conducted within the areas designated on charts, intsv VFR student jet tfc is conducted from gnd to 10,000' MSL within 5 nmi radius of Vance AFB and Kegelman Auxiliary (lctd 23 nmi NW of Vance AFB). These areas should be avoided. Recommended acft arriving and departing Woodring Arpt in VFR condition utilize the following routes. From the west, cross directly over the town of Lahoma at 3500' MSL and maintain 3500' MSL via hiway until within a three nmi radius of Woodring Arpt before starting descent. Departing Woodring Arpt W bound, climb to 3500' MSL within 3 nmi radius of Woodring Arpt then proceed W bound over hiway until reaching the town of Lahoma maintaining 3500' MSL. To and from the S maintain 2300' MSL E of an extended N/S line to a point abeam the town of Bison. To and from the N and E maintain 4000' MSL or below within 20 mi of Woodring Arpt. Low level jet navigation missions now being performed at 1000' to 1500' AGL at 300 knots along the following routes: Vance AFB: 8 nmi N of Fairview; Ft Supply; Darrouzett; Briscoe; Strong City; Bridgeport; Enid. Vance; 8 nmi N of Fairview; Knowles; Bucklin, Kans; Hazelton, Kans; South Haven, Kans; Enid. Vance; Clinton, Vichy, Medicine Lodge, Kans; Rago, Kans; Enid. Contact Vance Apch Control for tfc advisory 2200–2400 Mon-Fri on 121.3 or rcv on 122.5 mc.**

LAHOMA CITY, EXPRESSWAY JUNCTION ARPT: 802' (2749' MSL) lgtd TV twr being constrd 2.5 nmi NW (317° T) at lat 35°34'08", long 97°29'19".

GUE MUN ARPT: New. Lctd 2 mi W at lat 35°28'45", long 96°43'03". Elev: 1000'. One rnwy 17–35 2500 x 100 Turf. Unattended.

AGONER AIRSTRIP: 1949' (2549' MSL) lgtd TV twr constrd 14 nmi W (273° T) at lat 35°58'09", long 95°36'55".

OREGON

The following arpts are clsd for an unknown duration, due to winter: Beaver Marsh; Bend, Stearns; Crescent Lake Flight Strip; Idanaha, Strantiam; Lake of the Woods; Lapine; Pinehurst.

SPECIAL NOTICE: Periodic AA firing (Warrenton Artillery Range), during daigt hrs from surface to alt of 20,000' in area bounded by 46°12'N, 124°10' W thence 46°12'N, 123°59'20"W thence along a line one half mi E of shoreline to 46°02'N, 123°55'30"W thence 46°02'N, 124°10'W thence to point of beginning. Contact Portland or Hoquiam Rdo for actual firing dates.

PENNSYLVANIA

BRISTOL, 3-M AIRPORT: VOR Proc. No. 1, Orig., efctv 5 Sept 1964. During the period of the West Chester VORTAC shutdown, change transition from Ardmore VHF Int to read from "Temporary Ardmore VHF Int to PNE VOR".

BIG SPRING: Due intsv jet tfc at Webb operg Mon-Fri during daigt hrs it is suggested all acft operg VFR remain at or above 9000' MSL when traversing area

encompassed by 15 nmi arc of BGS VOR, excluding any overlap of V–66, including area W along V–16S to point 20 nmi SW of BGS VOR, and an extsn E to include area bounded N by S bndry of Trng Area Webb AFB/Reese Three, bounded S by N bndry of V–66, to N–S line drawn through town of Loraine, Tex. Concentrated jet trng within 10 nmi radius of Colorado City Aux Arpt lctd aprxly 38 nmi E Big Spring. VFR student jet tfc crossing airways within radius of 60 nmi BGS VOR utilizing appropriate VFR hemispherical crossing for tfc advisories.

BIG SPRING HAMILTON FLD: Caution, all alt 3,600′ MSL and above intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600′ MSL.

BIG SPRING HOWARD COUNTY ARPT. Caution, all alt 4,100′ MSL and above, intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600′ MSL.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200′ MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13–31 clsd ufn.

DALLAS, LOVE FLD: Two bldgs being erected 5 nmi SSE (144°T) at lat 32°47′00″, long 96°47′50″. Bldg A max tmpry hgt 661′ (1115′ MSL). Completed bldg will be 595.5′. (1039′ MSL). Bldg B will reach max tmpry hgt 710′ (1149′ MSL) in Jan 1965. Completed bldg will be 609.5′ (1049′ MSL).

ELYSIAN FIELDS ARPT: New. Lctd 0.1 mi E at lat 32°22′00″, long 94°10′45″. Elev: 338′. One rnwy 17–35 1700 x 100 Turf.

HONDO: Randolph AFB jet T-38 and T–33 acft will conduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs cntld by RSU freq 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 600′ above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 300′ MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress.

HOUSTON INTL ARPT: Inbnd flts ctc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° ctc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038–188° ctc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT: Microwave twr under constr 1400′ WSW 105′ AGL will be obstn lgtd and painted.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1. Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controller airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

LA GRANGE, ROCKY CREEK RANCH ARPT: New. Lctd 5 mi NE at lat 29°55′35″, long 96°48′10″. Elev: 420′. One rnwy 18–36 3200 x 150 Asphalt.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000′ MSL in this area. It this is not feasible ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; ctc on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

MIDLAND AIR TRML: Webb AFB T–38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS. acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000′ MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

PRESIDIO AIRSTRIP: Reactivated. Lctd 1 mi N at lat 29°34′30″ long 104°21′58″, Elev: 2580′. One rnwy 2–20 2290 x 100 Dirt. Rnwy 20 apch restricted by brush. Glide angle 0 to 1.

RUIDOSA ARPT: Reactivated. Name changed to Hot Springs Arpt Lctd 2 mi NE at lat 30°00′12″, long 104°39′20″. Elev: 3000 One rnwy 18–36 2520 x 100 Dirt. Rnwy 18 apch restricted by brush. Glide angle 0 to 1.

SAN ANGELO, MATHIS FLD: 253′ 2088′ MSL) lgtd rdo twr constr 6.5 nmi NNE (027° T) at lat 31°26′46″, long 100°25′43″

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42′00″, long 98°33′50″. Altitude: surface to 3000′ MSL (1500′ AGL). Time and use: 0830 to 1530 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000 MSL. Hvy conventional and jet instrument acrobatic and transition trng in SE quadrant btn V198 and V163 and V163W 60 nmi radius of Randolph Mon-Fri. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR VFR penetrations and apchs will be made from the La Vernia VOR to Randolph AFB. Should necessity dictate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

SHALLOWATER ARPT: Efctv Jan 1, 1965 rnwy lengthened 2000′ hard surfaced.

TEMPLE, DRAUGHON-MILLER ARPT: Runway 11–29 clsd until aprxly Mar 1, 1965.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

WACO MUN ARPT: 399′ (997′ MSL) lgtd antenna twr constrd 4.5 SSE (155° T) at Lat 31°32′03″ Long 97°10′55″.

UTAH

BRYCE CANYON ARPT: Rnwy clsd UFN acct snow.
DUCHESNE MUN ARPT: Lndg may be unsafe when snow covered. No snow removal eqpmt or svc, during winter months.
FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.
GREEN RIVER ARPT: Rnwy lgts operg on prior request.
PRICE ARPT: Rnwy lgts on prior request.
SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N, 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

OSBURG FALLS, ENOSBURG ARPT: New. Lctd 3 mi E at lat 44°55'20", long 72°45'20". Elev: 410'. One rnwy 2600 x 150 Gravel.
AIR HAVEN MUN ARPT: Clsd for duration winter season.
MANCHESTER, EQUINOX ARPT: Clsd for duration winter season.
NEWPORT MUN ARPT: Rnwy 5–23 clsd until about May 1, 1965 due snow.

VIRGINA

DAHLGREN: Restricted Area R–6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR–SS, Mon-Fri.
FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.
FRONT ROYAL, STOKES FLD: Unattended until aprxly Mar 1, 1965.
MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.
RICHMOND, RICHARD E. BYRD FLYING FLD: Rnwy 15-33 avbl only to scheduled DC–7, DC–6, turbo jet and local based military jet acft with prior arrangement with twr.

WASHINGTON

The following is a list of flds that are clsd November–May due to winter elements: Bandera Arpt; Easton Arpt; Emmelaw, Ranger Creek Arpt; Laurier, Avery Arpt; Leavenworth, Lake Wenatchee Arpt; Lester Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.
AUBURN EVERGREEN ARPT: Abandoned.
EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extendin gfor aprxly 2000' due to construction on fld UFN.
RENTON MUN ARPT TWR: Lgt gun signals not visible 195-300° at 1000' MSL beyond 2 mi.
SEATTLE: Hi alt jet route J96–505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

WEST VIRGINIA

CLARKSBURG, BENEDUM ARPT: Constr in progress rnwy 13–31, unlgtd.

WISCONSIN

CAMP DOUGLAS: Control area extension effective March 24, 1964 until further notice.
JANESVILLE: Efctv Jan. 1, 1965, control zone Sun thru Fri 0700 to 2330 and Sat from 0700 to 2000 local time.
NEW RICHMOND MUN ARPT: New. Lctd 1 mi at lat 45°09', long 92°32'. Elev: 995'. One rnwy asphalt NW/SE 3000 x 78. Rnwy lgts dusk-dawn. 100/130 fuel. Unattended.

WYOMING

DULL CENTER/DOUGLAS/SADLER ARPT: Abandoned.
LANCE CREEK, COW CREEK ARPT: Abandoned.

Federal Aviation Agency

Airman's INFORMATION MANUAL

SECTION III A

NOTICES TO AIRMEN

ATTENTION

SEE "NOTICE TO SUBSCRIBERS"
INSIDE OF COVER

21 JANUARY 1965

NOTICE TO SUBSCRIBERS

Many comments have been received from you, the subscribers, containing constructive criticism and offering many fine suggestions for improvement of the Airman's Information Manual (AIM). We appreciate your interest and initiative and assure you that we will evaluate each comment received for possible application to the manual. Each suggestion that furthers the purpose of the AIM and that is feasible on a cost vs. benefit basis, will be incorporated as soon as possible. In this regard, we must remember that each new feature added that increases the size of the manual and related production costs may result in increased subscription cost to be borne by you, the user. We, therefore, ask that you evaluate your suggestions on the basis of "need to know" vs "nice to have" and what you are willing to pay for. Also, information of value to you in your office or business that cannot be identified as having operational value to pilots, cannot be published.

Many of your comments reflect shortcomings on our part in explaining the innovations of the AIM. Some of you requested that the Air Navigation Radio Aids (ANRA) Section of the Airman's Guide be included in the AIM, as you constantly referred to this section for VOR frequency information, etc. It is obvious by your coments that this is one of the areas in which our explanation fell short and we will now try to rectify this situation.

In initial development of the manual, the main purpose has been that the AIM would be developed as a pilot's operational manual containing information that would supplement the data shown on charts. The AIM would contain terminal and preflight planning data, while charts would provide enroute data, to the fullest extent possible, to minimize the need to refer to other sources while enroute. This concept was proposed by you, the users. The next objective was to reduce duplication between charts and the AIM data as much as possible. This was to keep the cost of the AIM as low as possible and to establish a true relationship between the AIM and the charts.

Next to three-hole punching the Airman's Guide, the other most often asked for changes in the Airguide were enlargement of the type size (print) and consolidation of the many separate tabulations that had to be consulted to adequately flight plan. Nearly every comment on this latter item suggested all information in each tabulation be combined into a single listing of all data for each airport. This has been done as is reflected in Sections IV and IV-A. All items contained in the Airman's Guide ANRA Section have been included in the AIM, except for VOR and LF radio range information. For further clarification, the following tabulation indicates items, by title, contained in the Airman's Guide and their location in the AIM:

Airman's Guide	*AIM*
Radar Services (ASR, PAR)	Section IV-A (by airport)
ILS	Section IV-A (by airport)
Control Tower	Section IV-A (by airport)
VHF/DF	Section IV-A (by airport)
Flight Service Stations (FSS)	Section IV-A (complete listing)
ARTC Center Frequencies	Section IV-A (complete listing)
VOR Radiated Test Patterns (VOT)	Section IV-A (by airport)
Transponder Beacons (BCN)	Section IV-A (by airport)

(Included in Section IV-A of the AIM, but not previously provided in Airguide, are identification of voice call and specific frequencies assigned to Approach Control, Departure Control, Ground Control, Clearance Delivery, Traffic Information Service, VFR Advisory Service, etc.).

Therefore, of all former ANRA data, only the VOR and LF radio range information has not been retained in the AIM. Reasons for this decision are as follows:

1. Enroute information should be published on charts, to the extent possible. Radio ranges fall in the category of enroute aids (approach and letdown use of ranges is provided for by Instrument Approach Charts), therefor, charts will be the primary user source for this information.

a. The section of the AIM (IV-A) containing facility data is reproduced every 28 days on the identical cycle (effective date) as the Enroute Charts. Changes to NAVAIDs are applied directly to each revision of Enroute Charts for use of the IFR pilot rather than published in AIM. Updating of NAVAID information on the VFR pilots charts was provided for by the addition of the Visual Navigation Chart Bulletin in Section III (III-34) of the AIM. This Section, which is also published every 28 days, will indicate, cumulatively, all changes to the NAVAIDS, etc., shown on the current edition of each Sectional Chart, until the information is published on the next of the particular chart. This user requested feature provides the VFR pilot with the same cycle of currency of information (28 days) as the IFR pilot.

2. Biweekly Notices to Airmen, Section III-A of the AIM, and teletype NOTAMs update both the Enroute Charts and the Visual Navigation Chart Bulletin between AIM publication dates.

3. Application of the foregoing concept has, we believe, provided the user with current and correct NAVAID data in a more desirable operationally useable form.

In developing this manual, the FAA has attempted to provide for all user identified operational requirements to the fullest extent possible. It must be recognized that FAA has obligations to all aviation and that some requirements applicable to a limited segment of aviation cannot fairly be accommodated at the expense (cost and volume) of all others.

The AIM will be in a test and evaluation status for the next two years and will be revised to accommodate new and changing evaluated user needs. The AIM is published for the benefit of you, the user, and is subject to change in accordance with your identified needs. However, we ask that you give this new publication a fair evaluation by becoming familiar with all its features and uses. Following this period of indoctrination please tell us what you want changed and what you want to stay as is.

Section III–A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the IM. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or revised Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

TE: Data printed entirely in bold face type are considered permanent and will usually be cited only once. Such information uld be noted on charts and records. Temporary information is ntinuously cited until the condition is no longer in effect.

TE: Data is arranged in alphabetical order by State (and within State by City or locality).

W OR REVISED DATA: New or revised data are indicated by derlining the first line of the affected item. The new information not necessarily limited to the underlined portion, which is used y to attract attention to the new insert.

ALABAMA

NISTON, LEE BROS ARPT: Clsd to public.

YOU LA BATRE, BAY VIEW ARPT: Paved 3000' drag strip 75'S and parallel to turf rnwy. P-line each side of drag strip and wire across strip 75' from E end. S/S turf rnwy under constr, covered with stumps not o be used for acft operns.

THERINE, MARTIN FLD: Clsd until spring.

RUCKER: Extsv IFR and VFR student trng conducted in area bounded by V–115 W, V–241 S, V–70 N nd V–241 E. Normal hrs of operns 0600–2400 Mon-Fri rom surface to 10,000'.

LEYVILLE MUN ARPT: Abandoned.

OBILE, BROOKLEY AFB: Caution, effective immediately and until further notice all aircraft are warned f extensive high performance jet (F–105) traffic in the ollowing area during dalgt hrs only: From the surace to 5000' MSL over the Mississippi Sound from a oint 30°15'N, 88°04'W to a point 30°15'N, 88°50'W. Concerned aircraft will be flying a race track pattern etween the above listed coordinates for the purpose of ontour map/terrain avoidance radar calibration. Therefore, the pilots in the F–105 aircraft will be imited to the amount of visual surveillance they can ive to air to air separation under VFR conditions. LMA CRAIG AFB: Extsv jet student trng conducted luring dalgt hrs and occasional ngts Mon-Fri from surace to 6000' MSL. Craig ctl zone saturated dalgt hrs to 000' MSL during student trng. VFR acft should conact Craig twr on 236.6 or 119.5 mc for tfc advisories. Craig Twr is avbl for indg advisories for acft indg Selield. Clsd excp for ofl bus. clsd to transit aero club acft.

ARIZONA

USE ARPT: Clsd until aprxly March 1965.

REFREE ARPT: Bcn inop UFN.

HUACHUCA: See Yuma Special Notice.

LA BEND: See Yuma Special Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

MENTONE, CLOUDMONT ARPK: New. Lctd 3 smi N at lat 34°32'00", long 85°35'25". Elev: 1760'. One rnwy 18–36 2450 x 80' turf. Rnwy 36 apch restricted by trees. Glide angle 1 to 1. Attended dalgt hrs June-Sept.

MESA, FALCON FLD. Until Feb 20, 1965, small rocket test firing within one mile radius of a point 3 smi N maximum height 2,500 AGL. One day per week 1100 MST to 1500 MST. Contact Phoenix FSS for details.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hidensity jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12–30 is 2900'.

TUCSON, RYAN FLD: About Nov 16, all rnwys will be clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000' MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307. Efctv Jan. 15, 1964 to Jan 15, 1965 the flwg R–2303 Yuma East restricted area is established: Bndrys: beginning at 33°, 114°17'20"; thence N along State Highway 95 to 33°28', 114°13'; 33°24', 113°39'; 33°13'12", 113°21'36"; 33°07'17", 113°24'10"; 33°02', 113°33'50"; 33°02', 113°56'30"; 33°00', 114°11'; to point of beginning. Designated Altitudes: 1500' above the surface to 20,000' MSL. Time of Designation: Continuous, Jan. 15, 1964 to Jan. 15, 1965. Controlling Agency: Federal Aviation Agency, Los Angeles ARTC Center. Using Agency: Commanding Officer, Yuma Proving Ground, Yuma Ariz.

ARKANSAS

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000'.

CALIFORNIA

AUBURN: Dec 10, awy bcn site 10, SFO–SLC airway decomsnd.

BAKERSFIELD HELIPORT: Abandoned.

BENTON ARPT: New. Lctd 0.5 mi E at lat 37°49'30", long. 118°28'30". Elev: 5417'. One rnwy N/S 2640 x 100' dirt. Unattended. Associated FSS is Tonopah.

BLUE LAKE, CAVINESS ARPT: Open to the public. Lctd 1 mi W at lat 40°53', long 124°00. Elev: 75'. One rnwy 14–32 1200 asphalt. Unattended.

BURBANK, LOCKHEED AIR TERMINAL TWR: Feb 1, ILS lclzr and glide slope rnwy 7 will be shutdown until aprxly Mar 5 for mod.

COD POINT: About Feb 26, awy bcn site 1A will be decomsnd.

CORNING MUN ARPT: Clsd until aprxly Feb 10.

DAVIS, UNIVERSITY ARPT: Elev: 65'.

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EVERGREEN RDO: About Feb 4, H facility will be decomsnd.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500' MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37'42", 121°48'47"; clockwise along the arc of 3-mi radius circle centered at 36°35'30", 121°50'30"; to 36°34'45", 121°47'24"; to 36°34'45", 121°48'35"; 36°35'45", 121°49'45"; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: Rnwy lgts, REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HOUGHTON LAKE HEIGHTS, HOUGHTON LAKE STATE ARPT: Skis only during winter.

HYAMPON ARPT: Clsd UFN due flood.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LONG BEACH RDO: TACAN portion of VORTAC unusable for apchs to Los Alamitos NAS acct crs roughness.

LOS ANGELES ARTCC: En route radar service avbl 10 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V[illegible] from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J10[illegible] FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles/Salt Lake City boundary. J11 FL 180–230 incl. from 5[illegible] miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is being conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-traveled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes are spoken. Dissemination continues to be over the Los Angeles "HOMER"; also available by telephone over Sprint 6–1640, Poplar 2–4111, Davis 3–4626 and via a special "Listening-only" interphone circuit which parallels the present "fastline" circuit serving subscribers at Van Nuys Airport, Lockheed Air Terminal in Burbank, San Fernando Airport, Whiteman Air Park in Pacoima and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must c[illegible] Stockton Apch Ctl prior to conducting IFR flight operns in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

NEWCASTLE: Dec 10, awy bcn site #9 SFO–SLC decomsnd.

POINT ARGUELLO: Civil acft desiring to transit W-[illegible] call Navy Point Arguello on 122.5 mcs (guard 24 hrs) and listen for reply on 124.4 mcs.

RIVERSIDE MUN ARPT: Efctv Dec 10, 1964 Riverside control zone will be efctv from 0500 to 2130 local time. All pilots must contact March Apch Ctl prior conducting IFR flight operns in the Riverside control zone.

SAN LUCAS: Dec 10, airway bcn site 21 LAX–SFO decomsnd.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200' or slightly wider than standard ILS OM. During VOR outages or shutdown for maintenance, flt checks reveal numerous useless signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

ISALIA MUN ARPT: Control zone will be efctv from 0700-2100 lcl time. All pilots must contact Fresno Apch Ctl prior to conducting IFR flight oprns in the control zone.

COLORADO

3OOMFIELD, JEFFERSON CO ARPT: First 3000' of rnwy 11 plus associated txwy clsd for resurfacing, usable length both directions 3000'. Ctc unicom for instructions.

ENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430-2330Z within a radius of 2500' of point lctd 104°41'11"W, 39°36'-30"N up to 1000' above surface.

VE CREEK ARPT: Reactivated. Lctd 0.5 mi E at lat 37°46', long 108°53'30". Elev: 6910'. One rnwy 1-19 3700 x 135' dirt. Unattended.

GLE: Ctld firing for use of Camp Hale. Area is 5 nmi radius from point lat 39°27', long 106°10'20", max ordinate of firing 15,000' MSL. Time of use: ontinuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

During the eriod of the West Chester VORTAC shutdown, the ollowing temporary missed approach procedure will be n effect: If visual contact not established upon descent o authorized landing minimums, or if landing not accomplished, make climbing left turn to 1600' and return to Wilmington LOM. Hold South, one-minute ight turns, inbound crs. 014 degrees.

DISTRICT OF COLUMBIA

ASHINGTON, MT VERNON: Low flying acft requested o avoid immediate vcnty Mt. Vernon estate lctd W bank Potomac River 10 mi S Washington Natl Arpt.

WASHINGTON NATL ARPT: The Weather Bureau and the Federal Aviation Agency will jointly institute a runway visibility observation program for runways 18, 36 and 15. Whenever the runway visibility system serving runway 36 is inoperative with visibility one and one half mile or less or runways 18 and 15 are in use for landing aircraft and the visibility is at or below one and one half mile an observer will be stationed at the approach end of the landing runway and will report visibility values manually in one quarter mile increments. These values shall be used in conjunction with reported ceiling and will be mandatory for the runway being served and should not be construed as runway visual range (RVR) values.

WASHINGTON NATL ARPT: JET POLICY FOR WASHINGTON NATIONAL AIRPORT—Due to limited ground handling facilities at the Washington National Airport, flight operations of only those turbojet aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, only approved types of turbojet aircraft of short or medium range (1) are engaged in corporate, private charter or rental type operations, and (2) solely intend to utilize the Airport's General Aviation ground service facilities. B. Currently approved types of medium and short range turbojet aircraft are as follows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. Short or medium range turbojet aircraft of types not listed above must secure advance authorization from the Airport Manager. Requests for such authorization should be made at least 48 hours in advance of the planned aircraft arrival at the Airport. D. Because of limited capabilities, the Airport cannot accomodate operations of turbojet aircraft for proficiency or practice take-off or landings.

FLORIDA

TRIPS TO HAITI, PUERTO RICO AND DOMINICAN REPUBLIC SPECIAL NOTICE: Non-commercial acft are prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergencvy fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

COCOA, CENTRAL BREVARD COUNTY ARPT: Fld will be clsd until aprxly Feb 2, 1965 for constr.

DUNKIRK RDO: About Feb 24, MHW will be permly decmsnd.

KEESEVILLE ARPT: Clsd winters excp to ski acft.

MANNSVILLE ARPT: New. Lctd ¼ mi S at lat 43°42′, long 76°04′. Elev: 500′. One rnwy E/W 2900′ Turf. 80/8 Fuel. Minor A and P repairs. P-line W. Open winters ski acft only.

MORRISONVILLE, NORTHWAY ARPT: Rnwy plowed during winter.

NEW YORK CITY: 1520′ rotating bcn atop Empire State Bldg lctd aprxly 11 mi NW JFK Arpts opers on rotating basis dusk to midngt. From midngt to dusk break bcn in fixed position with light beamed direct S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effective August 1, 1964, Kennedy Tower will begin an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling reducing frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runways currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs, when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay ,and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK, LA GUARDIA ARPT: FEE Clsd to all propelled and motorless acft and acft over 105,000 lbs unless prior permission of Arpt Mgr. ILS lctzr (rnwys 4 and 22) inop until further notice.

NORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

SIMULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350' radius centered at lat 42°46'59"N and long 76°53'06"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

TICONDEROGA ARPT: Clsd for duration winter season.

WATERTOWN MUN ARPT: Rnwy 1–19 clsd to all operns UFN. Will not be maintained during winter months.

NORTH CAROLINA

ELIZABETH CITY MUN ARPT: Due to heavy VFR GCA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth City Mun arpt contact Elizabeth City Coast Guard twr on 126.2 mc for tfc information. Acft without radio enter 500' pattern from the west.

FAYETTEVILLE, GRANNIS ARPT: Lelzr usable area confined to front crs and 35° either side. All other areas unusable.

FAYETTEVILLE, POPE AFB: Extensive operns to 2,000' MSL 1200–2200Z Mon thru Fri. Pilots of all acft are advised that in an area from Lillington, N.C., north along arwy V3E 6 NM to Chalybeate, N.C., counterclockwise west 12 NM to Broadway, N.C., thence SW 38 NM to Marston, N.C., thence E 26 NM to Rockfish, N.C., thence NE 27 NM back to Lillington; intensive training will be conducted W of V3E using heavy four engine transport and prop jet (C–124 and C–130) acft, consisting of single, formation, and multiple formation flights. These acft oper 2,000' and below under VFR conditions, conducting low level (300' AGL to 2,000' MSL) runs in the maneuvering area described above, for troop and cargo drops into R-5311. Similar operations are conducted in the vicinity of Mackall AAF with drops at Mackall AAF.

HICKORY MUN ARPT: Rnwys 1–19 and 11–29 clsd due constrn.

NORTH DAKOTA

HARRISON MUN ARPT: Reactivated. Lctd adj SE at lat 47°-38'30", long 101°23'30". Elev: 1920'. One rnwy 2350' Turf. Unattended.

HAGARA, HALSTENSON ARPT: New. Lctd 1.5 smi NE at lat 48°01'29", long 97°50'40". Two rnwys E/W 2600 x 50 and N/S 1300 x 75 Turf. Rnwys soft when wet. 80/87. Fuel irregularly attended.

HEMBINA MUN ARPT: E/W rnwy clsd and constrn on rnwy 14–32 until aprxly Jul 15, 1965.

HEELE MUN ARPT: Reactivated. Lctd 2.5 mi W at lat 46°51'30", long 99°59'30". Elev: 1900. One rnwy 12–30 2650 x 75 Turf. Rnwy 30 apch restricted by P-line. Unattended.

OHIO

CINCINNATI: Moored mrkd balloon will be flown day or ngt up to an alt 1500' MSL. Site of operns 7½ mi NE Greater Cincinnati Arpt and 6½ mi W Lunken Arpt. Balloon will be tethered aprxly ½ mi W of Cincinnati Union Trml Bldg.

LAKE MILTON, KOASIS RESORT ARPT: Clsd until further notice.

RAVENNA ARSENAL (APCO): Ctld firing for demolition purposes, when wea permits, during regular working hrs, Mon-Fri within the following area: bounded on S by lat 41°11'30", on N by lat 41°12'20"; E long 81°04'22"; W long 81°06'14". Demolition activities in this area will go no higher than 5000' MSL and only when ceiling of 10,000' or better and vsby 10 mi or more. Notams regarding activities conducted will be filed with FSS Akron Mun Arpt (telephone STadium 4-1246).

TOLEDO MUN ARPT: Clsd Suns to all itinerant acft btn 1400–2300 due to drag races all rnwys UFN.

YOUNGSTOWN MUN ARPT: All commercial acft must keep at least 30' wing tip clearance from Admin Bldg very hazardous.

OKLAHOMA

ARDMORE, LAKE MURRAY STATE ARPK: Change name to Ardmore, Downtown Arpt.

ARDMORE, ROBERTS ARPT: New. Lctd 2 mi NE at lat 34°09'30", long 97°05'. Elev: 880'. One rnwy 17–35 Turf 1940 x 100. Rnwy 17 apch restricted by p-line. Rnwy 35 apch restricted by tree. Glide angle 0 to 1. 80/87 Fuel only. Cattle on fld. Unattended.

DUNCAN, HALLIBURTON FLD: 390' (1380' MSL) lgtd rdo twr constrd 8 nmi SSE (168 T) at lat 34°20'57" long 97°55'37".

ENID: Efctv Nov 15, 1964 ctl zone times will be 0700–1800 local time Mon thru Thurs 0700–2200 local time Fri, from 0800 1600 local time Sat, and 1200–1800 local time Suns. Control zone not designated on holidays.

ENID: Mon-Fri during dalgt hrs, in addition to intsv student jet operations being conducted within the areas designated on charts, intsv VFR student jet tfc is conducted from gnd to 10,000' MSL within 5 nmi radius of Vance AFB and Kegelman Auxiliary (lctd 23 nmi NW of Vance AFB). These areas should be avoided. Recommended acft arriving and departing Woodring Arpt in VFR condition utilize the following routes. From the west, cross directly over the town of Lahoma at 3500' MSL and maintain 3500' MSL via hiway until within a three nmi radius of Woodring Arpt before starting descent. Departing Woodring Arpt W bound, climb to 3500' MSL within 3 nmi radius of Woodring Arpt then proceed W bound over hiway until reaching the town of Lahoma maintaining 3500' MSL. To and from the S maintain 2300' MSL E of an extended N/S line to a point abeam the town of Bison. To and from the N and E maintain 4000' MSL or below within 20 mi of Woodring Arpt. Low level jet navigation missions now being performed at 1000' to 1500' AGL at 300 knots along the following routes: Vance AFB: 8 nmi N of Fairview: Ft Supply; Darrouzett; Briscoe; Strong City; Bridgeport; Enid. Vance; 8 nmi N of Fairview; Knowles; Bucklin, Kans; Hazelton, Kans; South Haven, Kans; Enid. Vance; Clinton, Vichy, Medicine Lodge, Kans; Rago, Kans; Enid. Contact Vance Apch Control for tfc advisory 1200–2400 Mon-Fri on 121.3 or rcv on 122.5 mc.

OKLAHOMA CITY EXPRESSWAY JUNCTION ARPT: 1602' (2749' MSL) lgtd TV twr constrd 2.5 nmi NW (317° T) at lat 35°–34'06", long 97°29'19".

CHANGES/ADDITIONS TO AIM

PAGE I–4

10. The list of airborne check points and ground check points is published in Section III. VOT's are included with the airport information in Section IV A.

December 1964

PAGE I–5:

VOR Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

1. The terms VOR, VORTAC, and TACAN are, operationally, general terms covering the VHF and UHF omnidirectional bearing type of facilities without regard to the fact that the power, the frequency protected area, the equipment configuration, and operational requirements may vary between the facilities at different locations.
2. The table below lists the intended operational service volume or volumes of the various categories of VOR's, VORTAC'S, and TACAN's. Below 18,000 feet msl, the operational service volume of the H class facility has been limited to the L class service volume due to signal coverage characteristics of VHF and UHF facilities at the lower altitudes. T class facilities provide terminal service at locations where it is not practicable to provide L class frequency protection. Normal signal coverage and interference free service may be expected within the operational service volume unless specific facility restrictions have been imposed. Use of these facilities for IFR operations outside of the operational service volume without additional flight inspection is not intended and may result in undependable or inadequate indications in the cockpit.

Class of VOR, VORTAC, or TACAN	Operational Service Volume
T (Terminal)	25 nmi up to 12,000′ msl
L (Low altitude)	40 nmi up to 18,000′ msl
H (High altitude)	40 nmi up to 18,000′ msl 130 nmi from 18,000′ msl 45,000′ msl 100 nmi above 45,000′ msl

December 1964

PAGE I–36:

Under Vertigo, delete last sentence, "If the beacon ------ etc".

December 1964

PAGE II–3—PARAGRAPH 3. DIRECT FLIGHTS.

b. The azimuth feature of VOR aids and the azimuth and distance (DME) features of VORTAC/TACAN aids are assigned certain frequency protected areas of airspace which are intended for application to established airway and route use, and to provide guidance for planning flights outside of established airways or routes. These areas of airspace are expressed in terms of cylindrical service volumes of specified dimensions called "class limits" or "categories." An operational service volume has been established for each class in which adequate signal coverage and frequency protection can be assured. To facilitate use of VOR, VORTAC or TACAN aids, consistent with their operational service volume limits, pilot use of such aids for defining a direct route of flight in controlled airspace should not exceed the following:

December 1964

PAGE II–8:

Under 3. STANDARD INSTRUMENT DEPARTURES (SIDs) add: paragraph d. "It will be the responsibility of each pilot to accept or refuse the clearance issued." Change present d. to e.

December 1964

PAGE II–16:

HOLDING—Revise paragraph 6, last sentence to read: "Where the fix is associated with an instrument approach, and timed approaches are in effect, a procedure turn shall not be executed unless the pilot advises ATC since aircraft holding are expected to proceed inbound on final approach directly from the holding pattern when approach clearance is received."

December 1964

PAGE II–18:

AIRCRAFT CLIMBING/DESCENDING Add new paragraph:

d. If it is necessary during a climb or descent to level off at an intermediary altitude, advise ATC

December 1964

PAGE II–19—MILITARY CLIMB CORRIDOR RESTRICTED AIRSPACE

The procedures in this paragraph become effective on January 7, 1965.

Change title to read: "RESTRICTED AIRSPACE"

December 1964

PAGE II–20:

COMMUNICATIONS, 1. g., after the example add the following:

NOTE–Pilots in Alaska, Hawaii, U.S. Territories and possessions, operating at or above flight level 240 and who have requested and received a clearance specifying "VFR Conditions On Top" are requested to report their "actual" altitude as part of their IFR position reporting procedure and advise ATC prior to making an altitude change.

December 1964

PAGE II–22:

Add the following:

SPECIAL USE AIRSPACE

It is mandatory that pilots avoid unauthorized operation in prohibited areas and restricted areas and extremely important that warning areas not be penetrated unless prior approval has been obtained. The following explanation is to impress on all concerned the purpose of such areas and indicate that hazards are presented by activities within restricted and warning areas. Caution and intensive student jet training areas contain activity of interest to the nonparticipating pilot. The operations conducted within these areas are not considered hazardous and consist primarily of high volume military training. These five types of airspace are depicted on aeronautical charts published by the Coast and Geodetic Survey.

a. **Prohibited Area.** Airpsace identified by an area on the surface of the earth within which the flight of aircraft is prohibited. Such areas are established for security or other reasons associated with the national welfare. These areas are published in the Federal Register.

b. **Restricted Area.** Airspace identified by an area on the surface of the earth within which the flight of aircraft, while not wholly prohibited, is subject to restrictions. Activities within these areas must be confined because of their nature or limitations imposed upon aircraft operations that are not a part of those activities or both. Restricted areas denote the existence of unusual, often invisible, hazards to aircraft. Penetration of restricted areas during periods of activity may be extremely hazardous to the aircraft and its occupants. Restricted areas are published in the Federal Register and constitute Part 73 of the Federal Aviation Regulations.

c. **Warning Area.** Warning areas are established beyond the three-mile limit. They are areas of defined dimensions established to contain both visible and invisible hazards to nonparticipating aircraft. Though the activities within the warning areas are as hazardous as those contained within restricted areas, warning areas cannot be legally designated because they are over international waters. Penetration of warning areas during periods of activity may be hazardous to the aircraft and its occupants. Official descriptions of warning areas may be obtained upon request to the FAA, Washington, D.C.

d. **Caution Area.** Areas of defined dimensions within which the military training activities conducted, though not hazardous, are of interest to nonparticipating pilots. There are no restrictions applicable to flight within these areas. Information concerning these areas may be obtained upon request to the FAA, Washington, D.C.

e. **Intensive Student Jet Training Area (ISJTA).** These areas are depicted on aeronautical charts to identify airspace utilized by the military for the intensive training of student jet pilots. There is no restriction to VFR flight in these areas. Information on these training areas may be obtained from any FSS within 100 miles of the area.

December 1964

PAGE II–25:

Change the material under RADAR TRAFFIC INFORMATION SERVICE, subparagraph c. "Issuance of Traffic Information" as follows:

c. **Issuance of Traffic Information**—Traffic information will include the following concerning a target which may constitute traffic for an aircraft that is:

(1) Radar identified:
  (a) Azimuth from the aircraft in terms of the twelve hour clock;
  (b) Distance from the aircraft in nautical miles;
  (c) Direction in which the target is proceeding; and
  (d) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffic; i.e., slow or fast moving.

  Example:
  Traffic 10 o'clock, 3 miles, west-bound (type aircraft and altitude, if known or relative speed of the observed traffic). The pilot may, upon receipt of traffic information, request a vector (heading) to avoid such traffic. The vector will be provided to the extent possible as determined by the controller.

(2) Not radar identified:
  (a) Distance and direction with respect to a fix;
  (b) Direction in which the target is proceeding; and
  (c) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffi, i.e., slow or fast moving.

  Example:
  Traffic 8 miles out of the airport northeast-bound, (type aircraft and altitude or relative speed of the observed traffic).

December 1964

PAGE II–25:

Change the material under TERMINAL RADAR SERVICE as follows:

TERMINAL RADAR SERVICE

(Provided in designated Terminal Radar Service Areas, TRSA).

1. This service has been implemented at certain terminal locations and is provided on a voluntary pilot participating basis.
2. The purpose of this service is to provide, to the extent possible separation between all participating VFR aircraft and all IFR aircraft operating within the airspace defined as the TRSA.
3. The TRSA is primarily a radar environment and control is predicated thereon, however, this does not preclude application of nonradar separation when required or deemed appropriate. During weather conditions equal to or better than basic VFR:
   (a) 500 feet vertical separation may be used between VFR aircraft and/or between VFR and IFR aircraft.
   (b) Visual separation may be used between VFR aircraft and/or between VFR and IFR aircraft when the pilot sees the other aircraft and reports he will maintain visual separation from it.
4. Within the TRSA traffic information on observed but unidentified targets will, to the extent possible, be provided all IFR and participating VFR aircraft and such aircraft, at the request of the pilot, will be vectored to provide standard radar separation from the observed traffic, insofar as possible.

December 1964

● **PAGE III–25—STANDARD INSTRUMENT DEPARTURES (SIDS)**

Delete Bradley Field, Windsor Locks, Conn. and substitute the following:

CONNECTICUT

Windsor Locks

Effective Jan. 21, 1965

Narrative form only

AVON TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via Poughkeepsie VOR 089 radial to Poughkeepsie VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR 348 radial at or below 6,000 feet. Cross Bridgeport VOR 357 radial at and maintain (as assigned by ATC), then via (assigned route).

STAFFORD TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via direct to V146, thence via V146 to Putnam VORTAC; thence via Putnam VORTAC 100° radial to V16, V16 to Millis Intersection. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Putnam VORTAC at and maintain (as assigned by ATC). Thence via (assigned route).

MADISON TWO DEPARTURE

Departure headings from all runways will be assigne prior to take-off. Via 360° radial Hartford VOR Hartford VOR; thence direct Madison VOR; then V475 to Deer Park VORTAC. Maintain at or belo 3,000 feet for 3 minutes after departure; Cross Madis VOR at and maintain (as assigned by ATC), thence v (assigned route).

HARTFORD TWO DEPARTURE

Departure headings from all runways will be assig prior to take-off. Via direct Hartford VOR. Hartfo VOR 258 radial to Yale Intersection. Maintain at below 3,000 feet for 3 minutes after departure. Cr Madison VOR 360 radial at or below 4,000 feet. Cr Yale Intersection at and maintain (as assigned by AT then via (assigned route).

Concurrently cancel Avon One, Stafford One, Madis One, Hartford One Departures.

January 19

PAGE II–26.

Effective Jan 7, 1965 revise the material under AI PROACH CONTROL a. Radar Approach Control, su paragraphs (2) and (3) and add new (4) as follow

(2) IFR aircraft may be descended to the mi mum vectoring altitude, vectored to a positio in the airport traffic pattern and cleared fo a "visual approach" whenever the reporte ceiling is at least 500 feet above the minimu vectoring altitude and the visibility is thre miles or more. With a "visual approach clearance, the pilot operating on an IFI flight plan may deviate from the prescrib instrument aproach procedure and proceed the airport with visual reference to th surface, maintaining VFR conditions at a times. This procedure will afford a mor expeditious service to arriving aircraft an preclude unnecessary vectoring in the fina approach course of a published instrume approach procedure.

(3) Clearance for a visual approach is issue when:

(a) preceding aircraft reports sighting th airport and the tower controller has th aircraft in sight, or

(b) An aircraft is positioned behind a pr ceding aircraft and the pilot of the su ceeding aircraft reports sighting tha aircraft.

(4) Radar separation is provided from any pr ceding IFR aircraft until the clearance for visual approach is issued. Pilots cleared for a visual approach are reminded to adv ATC whenever they are unable to contin following the preceding aircraft and/or the encounter less than basic VFR weather co ditions. Radar service will be terminate when the pilot is told to contact the towe The tower will assign a landing sequen number.

December 1964

E II–30.

'aragraph 4. Change the last line to read "above the ort traffic area."

December 1964

E II–51

dd the following:

EPORTING AIRCRAFT ACCIDENTS, INFLIGHT HAZARDS AND OVERDUE AIRCRAFT

il Aeronautics Board, Safety Investigation Regula-s, Part 320 (in part)).

OTIFICATION

The operator of an aircraft shall immediately, and he most expeditious means available, notify the Civil onautics Board, Bureau of Safety Field Office near-the accident or occurrence when:

(1) As a result of the operation of an aircraft, any on (occupant or nonoccupant) receives fatal or seri-injury or any aircraft receives substantial damage;
(2) Aircraft collide in flight;
(3) The following inflight hazards are experienced:
(a) Fire;
(b) Rapid decompression requiring emergency ac-:
(c) Unwanted or asymmetrical thrust reversal;
(d) Flight control system malfunction or failure;
(e) Inability of any required flight crew member erform his normal flight duties as a result of injury ilness.
(f) An aircraft is overdue and is believed to have involved in an accident.

The following information is required if available:
(1) Location;
(2) Date;
(3) Time;
(4) Aircraft make, model, and registration number nationality;
(5) Names of operator and crew;
(6) Number of persons involved;
(7) Injuries of each person;
(8) Weather conditions;

EPORTS

The operator shall file a report on CAB Form 453 54, available from the Civil Aeronautics Board Field es, the Civil Aeronautics Board, Washington, D.C., the Federal Aviation Agency Flight Standards Dis-t Office:
(1) Within ten (10) days after an occurrence for ch notification is required in 1 (a) and (b) above;
(2) When, after seven (7) days, an overdue aircraft till missing;
(3) Upon request of an authorized representative of Civil Aeronautics Board;

. Each crew member, if physically able at the time report is submitted, shall attach thereto a statement ing forth the facts, conditions and circumstances re-ng to the accident or occurrence as they appear to to the best of his knowledge and belief. If the member is incapacitated, he shall submit the state-t as soon as he is physically able.

WHERE TO FILE REPORTS

. The operator of an aircraft shall file with the Field ce of the Civil Aeronautics Board nearest the acci-dent or occurrence any report required by this section involving:

(1) Aircraft having a maximum take-off weight of more than 12,500 pounds or rotorcraft regardless of weight.

(2) Aircraft having a maximum take-off weight of 12,500 pounds or less operated by an air carrier certificated to engage in air transportation in the State of Alaska; and

(3) Aircraft, regardless of maximum take-off weight, where fatal injuries have occurred to any occupant of such aircraft.

b. The operator of an aircraft shall file with the FAA Flight Standards District Office nearest the accident or occurrence any report required by this section involving fixed-wing aircraft with a maximum take-off weight of 12,500 pounds or less except reports which are required to be filed with the Board pursuant to paragraph A above. FAA Flight Standards District Offices are listed on last page of Section II in Airman's Information Manual.

c. Civil Aeronautics Board field Safety Office addresses and telephone numbers are **Anchorage:** P.O. Box 2219, Anchorage, Alaska; BRoadway 2–7001. **Chicago:** Suite 206, 6525 North Avenue, Oak Park, Ill.; VIllage 8-9565. **Denver:** 1549 Emporia Street, Auroa, Colo.; EMpire 6-8249. **Fort Worth:** 100 North University Drive, University Plaza Building, Fort Worth 7, Tex.; EDison 6-2463. **Kansas City:** 912 East 63d Street, Kansas City, Mo. 64110; EMerson 3-2220 and 3-2221. **Los Angeles:** Los Angeles International Airport, 5820 Avion Drive, Room 228, Los Angeles 45, Calif.; SPring 6-0117. **Miami:** P.O. KANSAS/NEBRASKA/SOUTH DAKOTA

BULL RING

Effective March 1 thru August 27, 1965

Aircraft shall cross the Sioux Falls VORTAC 269/55 (43°46′N, 98°02′W) at FL 230 or as assigned by ARTC; then descend direct so as to cross 43°02′N, 99°06′W at 8,000′ MSL; then at 8,000′ MSL direct to 42°54′N, 99°-17′W; then descend direct so as to cross 42°35′N, 99°31′W at 4,000′ MSL (Low Level Entry Point); then at 4,000′ MSL direct to 40°41′N, 99°38′W; then at 4,000′ MSL direct to 40°00′N, 100°10′W; then at 4,200′ MSL direct to 39°26′N, 100°36′W; then at 4,200′ MSL direct to 39°-13′N, 100°37′W; then at 4,100′ MSL direct to the entry point of the bomb run corridor at 38°50′N, 100°40′W.

Short Look and Lay Down—After passing 38°50′N, 100°-40′W aircraft shall maintain between 3,000′ MSL and 6,000′ MSL through the bomb run corridor (5 SM either side of centerline from 38°50′N, 100°40′W to 38°23′N, 100°43′W), the minimum IFR altitude through the bomb run corridor is 4,100′ MSL. After exiting the route at 38°23′N, 100°43′W, aircraft shall turn left climbing to 38°20′N, 100°26′W; then continue climb direct so as to cross 38°31′N, 100°24′W at 16,000′ MSL; then at 16,000′ MSL direct 38°40′N, 100°23′W; then at 16,000′ MSL turn left to 38°41′N, 100°41′W; then climb direct to the Dodge City, Kansas, VOR crossing 38°19′N, 100°24′W at FL 230; then at FL 230 to the Dodge City VOR.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall after passing 38°23′N, 100°43′W, turn left and climb so as to cross 38°20′N, 100°26′W at 8,000′ MSL; then at 8,000′ MSL direct 39°21′N, 99°30′W; then at 8,000′ MSL turn left to 39°31′N, 99°34′W then at 8,000′ MSL direct 39°31′N, 100°12′W; then start descent direct so as to cross 39°31′N, 100°28′ at 4,200′ MSL; then turn left at 4,200′ MSL to 39°26′N, 100°36′W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000′; visibility 5 miles, the pilot may descend VFR and operate between the VFR altitudes indicated on the chart between the following points: From 42°25′N, 99°32′W to 41°35′N, 99°35′W and from 39°13′N, 100°37′W to 38°-23′N, 100°43′W. During daylight hours, some VFR operations will be flown 500′ above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain. The lower VFR altitude on the chart is the minimum altitude that will be reached during daylight hours.

Route Width—The route width is reduced to 5 SM on each side of centerline from 40°53′N, 99°38′W to 39°-35′N, 100°30′W.

Hours of Operation—24 hours daily, 7 days a week.

(Formerly "Main Gate")

Effective February 4, 1965

Aircraft shall cross 35°34′N, 107°24′W (Albuquerque VORTAC 305/43 DME fix) at FL 250 or assigned by the ARTCC; then descend direct to cross 35°42′N, 107°32′W at FL 210; then descend direct to cross 35°57′N, 107°51′W at 17,000′ MSL; then maintain 17,000′ MSL direct 36°09′N, 108°04′W; then descend direct to cross 36°16′N, 108°12′W at 15,000′ MSL; then 15,000′ MSL direct 36°58′N, 109°00′W (low level entry point); then descend direct to cross 36°58′N, 109°10′W at 13,000′ MSL; then 13,000′ MSL direct 36°58′N, 111°42′W then descend direct to cross 36°58′N, 112°00′W at 11,000′ MSL; then direct to cross 36°58′N, 112°29′W at or below 11,000′ MSL.

Short Look and Lay Down—After passing 36°58′N, 112°29′W aircraft shall operate between 9,000′ and 11,000′ MSL through the bomb run corridor (5 SM either side of centerline from 36°58′N, 112°29′W to 36°58′N, 113°51′W). After exiting the route at 36°58′N, 113°51′W aircraft shall turn left climbing to cross 36°53′N, 114°00′W at 11,000′ MSL; then maintain 11,000′ MSL direct to 36°44′N, 113°53′W; then climb via direct to cross 36°30′N, 113°42′W at or below 17,000′ MSL (reporting point "SLEEPY EYE" #1); then direct to cross 36°58′N, 113°36′W (PGS 336/21 DME fix) at FL 230; then intercept and proceed via Peach Springs 336 radial to Peach Springs (35°37′30″N, 113°32′W).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 36°58′N, 113°51′W turn left via direct to cross 36°53′N, 114°00′W at 11,000′ MSL; then 11,000′ MSL direct 36°44′N, 113°53′W; then 11,000′ MSL direct 36°44′N, 112°29′W; then turn direct to cross 36°58′N, 112°29′W at or below 11,000′ MSL; thence via published route.

Alternate Entry—Aircraft shall cross the Tuba City Arizona VOR (36°07′30″N, 111°16′W) (Reporting Point) at FL 240 or as asigned by the ARTCC; then maintain FL 240 or assigned altitude via Tuba City 091° radial until 23 miles north (36°28′N, 111°04′W); then descend direct to cross 36°58′N, 111°07′W at 13,000′ MSL; thence via published route.

Hours of Operation—24 hours daily, 7 days a week.

January 19

● **PAGE III–96—Change Oil Burner Route**

"WALNUT GROVE"

First paragraph, lines 5, 6, 7: Delete "then descend direct so as to cross 36°37′N, 81°06′W at or below 14,000′ MSL;"

January 19

● **PAGE IV–42—Change as follows:**

Second column, second entry under state of Idaho move MACKAY 1 SE to page IV–45 second column 5th entry from bottom and substitute MACKAY 1 SE for AMERICAN FALLS, AMERICAN FALLS 2 NE. The latter moves to page IV–42 second column, second line under state of IDAHO.

AIRMAN'S INFORMATION MANUAL

NOTICES TO AIRMEN

ATTENTION
TICE TO SUBSCRIBERS"
ASIDE OF COVER

SECTION III A

18 FEBRUARY 1965

FEDERAL AVIATION AGENCY

SPECIAL NOTICE

Because of many requests, VOR, LF radio beacons and ranges, and ILS compass locators (LOM) data will be added to Section IVA of the AIM in a subsequent issue.

NOTICE TO SUBSCRIBERS

Many comments have been received from you, the subscribers, containing constructive criticism and offering many fine suggestions for improvement of the Airman's Information Manual (AIM). We appreciate your interest and initiative and assure you that we will evaluate each comment received for possible application to the manual. Each suggestion that furthers the purpose of the AIM and that is feasible on a cost vs. benefit basis, will be incorporated as soon as possible. In this regard, we must remember that each new feature added that increases the size of the manual and related production costs may result in increased subscription cost to be borne by you, the user. We, therefore, ask that you evaluate your suggestions on the basis of "need to know" vs "nice to have" and what you are willing to pay for. Also, information of value to you in your office or business that cannot be identified as having operational value to pilots, cannot be published.

Many of your comments reflect shortcomings on our part in explaining the innovations of the AIM. Some of you requested that the Air Navigation Radio Aids (ANRA) Section of the Airman's Guide be included in the AIM, as you constantly referred to this section for VOR frequency information, etc. It is obvious by your comments that this is one of the areas in which our explanation fell short and we will now try to rectify this situation.

In initial development of the manual, the main purpose has been that the AIM would be developed as a pilot's operational manual containing information that would supplement the data shown on charts. The AIM would contain terminal and preflight planning data, while charts would provide enroute data, to the fullest extent possible, to minimize the need to refer to other sources while enroute. This concept was proposed by you, the users. The next objective was to reduce duplication between charts and the AIM data as much as possible. This was to keep the cost of the AIM as low as possible and to establish a true relationship between the AIM and the charts.

Next to three-hole punching the Airman's Guide, the other most often asked for changes in the Airguide were enlargement of the type size (print) and consolidation of the many separate tabulations that had to be consulted to adequately flight plan. Nearly every comment on this latter item suggested all information in each tabulation be combined into a single listing of all data for each airport. This has been done as is reflected in Sections IV and IV-A. All items contained in the Airman's Guide ANRA Section have been included in the AIM, except for VOR and LF radio range information. For further clarification, the following tabulation indicates items, by title, contained in the Airman's Guide and their location in the AIM:

Airman's Guide	*AIM*
Radar Services (ASR, PAR)	Section IV-A (by airport)
ILS	Section IV-A (by airport)
Control Tower	Section IV-A (by airport)
VHF/DF	Section IV-A (by airport)
Flight Service Stations (FSS)	Section IV-A (complete listing)
ARTC Center Frequencies	Section IV-A (complete listing)
VOR Radiated Test Patterns (VOT)	Section IV-A (by airport)
Transponder Beacons (BCN)	Section IV-A (by airport)

(Included in Section IV-A of the AIM, but not previously provided in Airguide, are identification of voice call and specific frequencies assigned to Approach Control, Departure Control, Ground Control, Clearance Delivery, Traffic Information Service, VFR Advisory Service, etc.).

Therefore, of all former ANRA data, only the VOR and LF radio range information has not been retained in the AIM. Reasons for this decision are as follows:

1. Enroute information should be published on charts, to the extent possible. Radio ranges fall in this category of enroute aids (approach and letdown use). ranges is provided for by Instrument Approach Charts; therefore, charts will be the primary user source for this information.

a. The section of the AIM (IV-A) containing facility data is reproduced every 28 days on the identical cycle (effective date) as the Enroute Charts. Changes to NAVAIDs are applied directly to each revision of Enroute Charts for use of the IFR pilot rather than published in AIM. Updating of NAVAID information on the VFR pilots charts was provided for by the addition of the Visual Navigation Chart Bulletin in Section II (III-34) of the AIM. This Section, which is also published every 28 days, will indicate, cumulatively, all changes to the NAVAIDS, etc., shown on the current edition of each Sectional Chart, until the information is published on the next issue of the particular chart. This user requested feature provides the VFR pilot with the same cycle of currency of information (28 days) as the IFR pilot.

2. Biweekly Notices to Airmen, Section III-A of the AIM, and teletype NOTAMs update both the Enroute Charts and the Visual Navigation Chart Bulletin between AIM publication dates.

3. Application of the foregoing concept has, we believe, provided the user with current and correct NAVAID data in a more desirable operationally usable form.

In developing this manual, the FAA has attempted to provide for all user identified operational requirements to the fullest extent possible. It must be recognized that FAA has obligations to all aviation and that some requirements applicable to a limited segment of aviation cannot fairly be accommodated at the expense (cost and volume) of all others.

The AIM will be in a test and evaluation status for the next two years and will be revised to accommodate new and changing evaluated user needs. The AIM is published for the benefit of you, the user, and is subject to change in accordance with your identified needs. However, we ask that you give this new publication a fair evaluation by becoming familiar with all its features and uses. Following this period of indoctrination please tell us what you want changed and what you want to stay as is.

Section III—A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the M. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or re-ed Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

TE: Data printed entirely in bold face type are considered permt and will usually be cited only once. Such information ld be noted on charts and records. Temporary information is inously cited until the condition is no longer in effect.

TE: Data is arranged in alphabetical order by State (and within State by City or locality).

W OR REVISED DATA: New or revised data are indicated by erlining the first line of the affected item. The new information ot necessarily limited to the underlined portion, which is used to attract attention to the new insert.

ALABAMA

YOU LA BATRE, BAY VIEW ARPT: Paved 3000' rag strip 75'S and parallel to turf rnwy. P-line each de of drag strip and wire across strip 75' from E end. /S turf rnwy under constr, covered with stumps not be used for acft operns.

OOKWOOD RDO: About March 4, VOR will be msnd. Ident: "BWA." Freq: 111.0 mc Class: L–VOR. Lctd at lat 33°14'22", long. 87°14'35". Variation 4°E. Monitoring category 1. Controlled by Birmingham FSS.

THERINE, MARTIN FLD: Clsd until spring.

ETTE MUN ARPT: 300' (853' MSL) lgtd tmpry microwave twr constrd 12.5 nmi SSW (195°T) at lat 3°30'56", long 87°53'. Will be removed June 1965.

RUCKER: Extsv IFR and VFR student trng conucted in area bounded by V–115 W, V–241 S, V–70 N nd V-241 E. Normal hrs of operns 0600–2400 Mon-Fri om surface to 10,000'.

SMITH MUN ARPT: 319' (846' MSL) lgtd antenna twr constrd nmi NNE (030°T) at Lat 35°26'17" Long 94°17'09".

MA CRAIG AFB: Extsv jet student trng conducted ring dalgt hrs and occasional ngts Mon-Fri from surce to 6000' MSL. Craig ctl zone saturated dalgt hrs to 00' MSL during student trng. VFR acft should conct Craig twr on 236.6 or 119.5 mc for tfc advisories. raig Twr is avbl for lndg advisories for acft lndg Seld. Clsd excp for ofl bus. clsd to transit aero club acft.

'ALOOSA, VAN DE GRAAFF ARPT: 240' (462' SL) lgtd chimney being constrd 3 nmi E (097° T) t lat 33°12'49, long. 87°32'45".

ARIZONA

SE ARPT: Clsd until aprxly March 1965.

'KEYE MUN ARPT: Clsd February 20 and 21 for ir contest.

CAREFREE ARPT: Ben inop UFN.

FT HUACHUCA: See Yuma Notice.

GILA BEND: See Yuma Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

HORN, WHITEWING RANCH 2 ARPT: Clsd to the public.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hi-density jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12–30 is 2900'.

TACNA ARPT: Rnwy 17–35 permly clsd.

TUCSON, RYAN FLD: All rnwys clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307

ARKANSAS

CAMDEN, HARRELL FLD: 350′ (580′ MSL) lgtd twr constrd 5 nmi WSW (252°T) at lat 33°35′41″, long 92°51′33″.

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

CALIFORNIA

BURBANK, LOCKHEED AIR TERMINAL TWR: ILS lclzr and glide slope rnwy 7 shutdown until aprxly Mar 5 for mod.

CORNING MUN ARPT: Clsd

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EL MONTE, LOS ANGELES-EL MONTE ARPT: Efctv Mar 1, 1965 fld will be clsd to the general public.

EVERGREEN RDO: H facility decomsnd.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HYAMPON ARPT: Clsd UFN due flood.

KLAMATH, McBETH FLD: Clsd for unknown duration due flood damage.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 18[illegible] 230 incl., from 55 miles N Boulder VOR to Los Angeles Salt Lake City boundary. J11 FL 180–230 incl. from [illegible] miles S Bryce VORTAC to Los Angeles/Salt Lake C[illegible] boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is bei[illegible] conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-traveled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes are spoken. Dissemination continues to be over the Los Angeles "HOMER"; also available by telephone over Sprint 6–1640, Poplar 2–4111, Davis 3–4626 and via a special "Listening-only" interphone circuit which parallels the present "fastline" circuit serving subscribers at Van Nuys Airport, Lockheed Air Terminal in Burbank San Fernando Airport, Whiteman Air Park in Pacoima and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must cont[illegible] Stockton Apch Ctl prior to conducting IFR flight operns in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

OXNARD, VENTURA CO ARPT TWR: About March 1[illegible] secondary civil apch ctl freq 122.5 to be decomsnd and replaced by 122.4 mc.

POINT ARGUELLO: Civil acft desiring to transit W-53 call Navy Point Arguello on 122.5 mcs (guard 24 hrs and listen for reply on 124.4 mcs.

RIVERSIDE MUN ARPT: Riverside control zone effv from 0500 to 2130 local time. All pilots must contact March Apch Ctl prior conducting IFR flight operns in the Riverside control zone.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200′ or slightly wider than standard ILS OM. During VOR outages or shutdown for maintenance, flt checks reveal numerous usable signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

VISALIA MUN ARPT: Control zone efctv from 0700–2100 lcl time. All pilots must contact Fresno Apch Ctl prior to conducting IFR flight operns in the control zone.

COLORADO

BROOMFIELD, JEFFERSON CO ARPT: First 3000′ of rnwy 11 plus associated txwy clsd for resurfacing. Usable length both directions 3000′. Ctc unicom for instructions.

DENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430–2330Z within a radius of 2500′ of point lctd 104°41′11″W, 39°35′30″N up to 1000′ above surface.

EAGLE: Ctld firing for use of Camp Hale. Area is 1 nmi radius from point lat 39°27′, long 106°19′30″. Max ordinate of firing 15,000′ MSL. Time of use continuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

HANOVER RDO: About March 4, H facility will be decomsnd.

EBLO: Controlled Firing (demolition) area for use of he Pueblo Ordnance Depot established within the fol- owing described area: bounded on N by lat 38°22'00"; , long 104°21'22"; S, lat 38°18'00"; W, long 104°22'- 9". Hrs of usage: 0900–1600 MST, Mon-Fri. Max alt 000' above the surface.

NEW YORK CITY: 1520′ rotating bcn atop Empire State Bldg lctd aprxly 11 mi NW JFK Arpts opers on rotating basis dusk to midngt. From midngt to daybreak bcn in fixed position with light beamed directly S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effective August 1, 1964, Kennedy Tower began an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling relative to frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runway currently in use shall be issued at this time. Time and altimeter setting will be issued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall con-

sist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs., when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay ,and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

EW YORK LA GUARDIA ARPT: Efctv Feb 1 to Apr 25, 1965, arpt will be clsd to all acft operns from 2330 to 0500 EST Monday thru Friday due to constrn.

ORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

ICHARD PARK: Clsd until spring.

TSFORD, BRIZEE HARMON ARPT: Abandoned.

)MULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350' radius centered at lat 42°46'50"N and long 76°53'06"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

'ONDEROGA ARPT: Clsd for duration winter season.

EDINBURGH MUN ARPT: Rnwys rough. Use Caution.

HONDO: Randolph AFB jet T-38 and T-33 acft will conduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs cntld by RSU freq 255.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 700' above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 3000' MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress. Non-scheduled dropping of personnel and equipment conducted from alt of 700' to 1000' above the surface on W side arpt Tues, Wed and Fri 1900-2300C and on Sat and Sun 1500-2100C.

HOUMA MUN ARPT: 268' (272' MSL) lgtd rdo twr constrd 2.5 nmi W (270°T) at lat 29°33'58", long 90°42'33".

HOUSTON, COLLIER ARPT: 379' (437' MSL) lgtd rdo twr constrd 3 nmi WSW (253° T) at lat 29°52'10", long 95°30'57".

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft operns for unknown duration.

HOUSTON INTL ARPT: Inbnd flts etc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° etc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038-188° etc HOU apch ctl on 118.1 or 307.1.

HOUSTON, MEML SKYLAND ARPT: 300' (345' MSL) lgtd radio twr constrd 7 nmi WSW (254° T) at lat 29°47'15", long 95°-49'30".

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

JOHNSON CITY, JOLLY ARPT: Abandoned.

KERMIT, ROBINSON ARPT: 350' (3654' MSL) lgtd rdo twr constrd 12 nmi NE (054 T) at lat 31°58'58", long 102°43'38".

KILLEEN, HOOD AAF: A VFR Practice Instrument Apch Procedure has been published in a loose leaf format for use by USAF Training Command Pilots. Civil requests for this chart should be submitted to the Director, Coast and Geodetic Survey, Attn: Distribution Division, 14th and Constitution Avenue, Washington, D.C. 20230.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1, Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controller airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

KILLEEN MUN ARPT: Clsd for rebuilding until aprxly May 15, 1965. Tmpry 1600' sod strip avbl for use during dalgt hrs when dry.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000' MSL in this area. It this is not feasible, ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; rcv on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

LUBBOCK MUN ARPT: N 400' rnwy 17L-35R clsd during constrn new E/W rnwy Usable lndg length both directions 3000'.

MIDLAND AIR TRML: Webb AFB T-38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS, acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000' MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42'00", long 98°33'50". Altitude: surface to 3000' MSL (1500' AGL). Time and use: 0830 to 1200 hrs lcl time, Frl of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000' MSL. Hvy conventional and jet instrument acrobatic and transition trng in SE quadrant btn V198 and V163 and V163W 60 nmi radius of Randolph Mon-Frl. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR/VFR penetrations and apers will be made from the La Vernia VOR to Randolph AFB. Should necessity dicate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

SPEARMAN ARPT: 425' (3596' MSL) lgtd rdo twr constrd 15 nmi WNW (282°T) at lat 36°15', long 101°22'41".

TEMPLE, DRAUGHON-MILLER ARPT: Runway 11–29 clsd until aprxly Mar 1, 1965.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

UTAH

BRYCE CANYON ARPT: Rnwy 12–30 clsd UFN acct snow.

BRYCE CANYON, KANAB MUN ARPT: Rnwy lgts inoperative. Rotating beacon changed to white.

DELTA MUN ARPT: Clsd to all ngt operns 1800–0600 MST UFN.

DUCHESNE MUN ARPT: Lndg may be unsafe when snow covered. No snow removal eqpmt or svc. during winter months.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N, 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

BARRE-MONTPELIER ARPT: Rnwy 5–23 clsd until aprxly Apr 15, 1965.

BRISTOL, MUN ARPT: Open winters. N/S rnwy will be plowed.

NEWPORT MUN ARPT: Rnwy 5–23 clsd until about May 1, 1965 due snow.

RUTLAND MUN ARPT: Rnwy 13–31 clsd winters.

VIRGINIA

DAHLGREN: Restricted Area R–6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR–SS, Mon-Fri.

EMPORIA MU NARPT: All lndg area lgts inop.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.

FRONT ROYAL, STOKES FLD: Unattended until aprxly Mar 1, 1965.

MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.

ONANCOCK, JOHNSON FLD: 285' (317' MSL) lgtd rdo twr constrd 3 nmi ENE (068° T) at lat 37°43'02", long 75°41'01".

RICHMOND, RICHARD E. BYRD FLYING FLD: Rnwy 15–33 avbl only to scheduled DC–7, DC–6, turbo jet and local based military jet acft with prior arrangement with twr.

SHENANDOAH ARPT: Clsd for winter.

WELLVILLE, DALTON ARPT: Abandoned.

WASHINGTON

The following is a list of flds that are clsd November-May due to winter elements: Bandera Arpt; Easton Arpt; Enumclaw, Ranger Creek Arpt; Laurier, Avery Arpt; Leavenworth, Lake Wenatchee Arpt; Lester Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.

The following is a list of airports that are clsd until further notice (aprxly April or May): Davenport, La-Crosse Mun, Lind, Northport-Lowry Mun and Metaline Falls-Sullivan Lake USFS.

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extendin gfor aprxly 2000' due to construction on fld UFN.

RENTON MUN ARPT TWR: Lgt gun signals not visible 195–300° at 1000' MSL beyond 2 mi.

SEATTLE: Hi alt jet route J96–505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

WENATCHEE RDO: VOR shutdown rescheduled to about Mar 1 until aprxly Mar 5, 1965 For substitute route structures, see Section III, dated Feb. 4, 1965.

WEST VIRGINIA

CHARLESTON, KANAWHA ARPT: 349' (1449' MSL) lgtd bcn twr constrd 3 nmi SSW (211° T) at lat 38°19'15", long 81°36'31".

CLARKSBURG, BENEDUM ARPT: Constr in progress rnwy 13–31, unlgtd.

WISCONSIN

CAMP DOUGLAS: Control zone effective Feb 18, 1965 from 0745-1630 lcl time daily until further notice.

CORNELL ARPT: Open to ski equipped acft only

GRAYTOWN ARPT: Open to public. Lctd 0.25 smi SE at lat 45°12', long 92°07'. Elev: 1040. One rnwy E/W 2000 x 100' Turf. 80/87 Fuel only.

GREEN BAY RDO: VORTAC shutdown rescheduled to about Mar 1 until aprxly Mar 5, 1965. For substitute route structures see Section III, dated Feb 4, 1965.

JANESVILLE: Control zone Sun thru Fri 0700 to 2359 and Sat from 0700 to 2000 local time.

LADYSMITH, BUSH FLD: Open to ski equipped acft only.

LAND O LAKES, KINGS LAND O LAKES MUN ARPT: Clsd winter months. Rnwy lgts on req (Phone 547–3777.)

MANITOWISH WATERS ARPT: Clsd winters. No fuel until spring.

MANITOWOC MUN ARPT: Rnwy 17–35 being extended to 5000'. Constrn in progress N end rnwy. Men and equipment in N apch area. Completion date expected about mid summer.

WEST SALEM, MAPLE GROVE ARPT: Clsd until April 15, 1965.

WYOMING

KREMMERER MUN ARPT: Clsd UFN due winter snow conditions.

WILSON, FISH CREEK RANCH ARPT: Open to public May 15 to Nov 15 annually. Lctd 2 smi S at lat 43°28', long 110°52' Elev: 6136'. One rnwy 15–33 Turf 3150 x 120. Unattended

CHANGES/ADDITIONS TO AIM

I-4

The list of airborne check points and ground check oints is published in Section III. VOT's are in- uded with the airport information in Section IV A.

December 1964

I-5:

)R Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

e terms VOR, VORTAC, and TACAN are, opera- onally, general terms covering the VHF and UHF nidirectional bearing type of facilities without re- d to the fact that the power, the frequency pro- cted area, the equipment configuration, and opera- nal requirements may vary between the facilities different locations.

e table below lists the intended operational service lume or volumes of the various categories of VOR's, ORTAC'S, and TACAN's. Below 18,000 feet msl, e operational service volume of the H class facility s been limited to the L class service volume due to nal coverage characteristics of VHF and UHF cilities at the lower altitudes. T class facilities ovide terminal service at locations where it is not acticable to provide L class frequency protection. rnal signal coverage and interference free service y be expected within the operational service volume less specific facility restrictions have been imposed. e of these facilities for IFR operations outside of operational service volume without additional ght inspection is not intended and may result in dependable or inadequate indications in the cock- .

s of VOR, AC, or TACAN	Operational Service Volume
erminal)	25 nmi up to 12,000' msl
ow altitude)	40 nmi up to 18,000' msl
ligh altitude)	40 nmi up to 18,000' msl 130 nmi from 18,000' msl 45,000' msl 100 nmi above 45,000' msl

December 1964

E I-5:

ete paragraphs 5 and 6 under Distance Measuring ment (DME) and substitute the following:

e to the limited number of available frequencies, signment of frequency pairs has been required for certain military noncollocated VOR and TACAN facilities which serve the same area but which may be separated from a few to many miles. Additional frequency assignments have been made for remotely located military TACAN facilities which may be within reception range of a randomly paired ILS localizer. Selection of a DME channel while tuned to a randomly paired VOR or ILS frequency could result in the reception of distance information from a source which is remotely located from the VOR or ILS facility.

6. VOR/DME, VORTAC and ILS/DME facilities are readily identified by synchronized identifications which are transmitted on a time share basis. Identification of noncollocated VOR or ILS and TACAN facilities are not synchronized, resulting in intermixing and apparent distortion during TACAN identification whenever simultaneous aural monitoring of VOR or ILS and TACAN identification is attempted. DME equipment has been installed at only a few ILS locations and any DME presentation while using an ILS frequency which does not have an associated DME would be originating from a randomly paired remote location.

7. Aircraft receiving equipment which provides for automatic DME selection assures reception of azimuth and distance information from a common source whenever designated VOR/DME, VORTAC and ILS/DME navigation facilities are selected. Until further advised, pilots are cautioned to disregard any distance displays from automatically selected DME equipment whenever VOR or ILS facilities, which do not have the DME feature installed, are being used for position determination.

February 1965

PAGE I-24:

Under TRANSCRIBED WEATHER BROADCASTS add:

3. Automatic transcribed broadcasts service is available on class H facilities designated as:

a. HSAB—A class H radio beacon required for IFR radio navigation and/or airtraffic control and for automatic transcribed weather broadcast service. This class facility will be depicted on radio facility, Sectional and WAC type charts.

b. SABH—A class H radio beacon having limited navigational use in that it is not flight inspected for IFR certification or primarily used for air traffic control. This aid will provide the automatic transcribed weather

adcast service and will be depicted on Sectional and AC type charts, only.

. Operation of either type facility will be essentially same. Both will have a code identification sent at quency intervals keyed simultaneously with the voice nals. Although, not essential, it may be advantageous listeners to equip their receivers with a 1020 cycle e rejection filter which, when switched to the "voice" ition, will silence the keyed code identification signal.

. The AB (automatic transcribed service) component HSAB's and SABH's will operate continuously except ing those periods when the transcription equipment operative. During these periods manual broadcasts, dduled (H+45 hourly) and non-scheduled will be le.

nder Vertigo, delete last sentence, "If the beacon ... etc".

December 1964

E II-3—PARAGRAPH 3. DIRECT FLIGHTS.

a. The azimuth feature of VOR aids and the azimuth and distance (DME) features of VORTAC/TACAN aids are assigned certain frequency protected areas of airspace which are intended for application to established airway and route use, and to provide guidance for planning flights outside of established airways or routes. These areas of airspace are expressed in terms of cylindrical service volumes of specified dimensions called "class limits" or "categories." An operational service volume has been established for each class in which adequate signal coverage and frequency protection can be assured. To facilitate use of VOR, VORTAC or TACAN aids, consistent with their operational service volume limits, pilot use of such aids for defining a direct route of flight in controlled airspace should not exceed the following:

December 1964

E II-8:

nder 3. STANDARD INSTRUMENT DEPARES (SIDs) add: paragraph d. "It will be the onsibility of each pilot to accept or refuse the ance issued." Change present d. to e.

December 1964

E II-16:

OLDING—Revise paragraph 6, last sentence to : "Where the fix is associated with an instrument oach, and timed approaches are in effect, a procedure shall not be executed unless the pilot advises ATC aircraft holding are expected to proceed inbound nal approach directly from the holding pattern when oach clearance is received."

December 1964

PAGE II-18:

AIRCRAFT CLIMBING/DESCENDING Add new paragraph:

d. If it is necessary during a climb or descent to level off at an intermediary altitude, advise ATC.

December 1964

PAGE II-19—MILITARY CLIMB CORRIDOR RESTRICTED AIRSPACE.

The procedures in this paragraph become effective on January 7, 1965.

Change title to read: "RESTRICTED AIRSPACE".

December 1964

PAGE II-20:

COMMUNICATIONS, 1. g., after the example add the following:

NOTE—Pilots in Alaska, Hawaii, U.S. Territories and possessions, operating at or above flight level 240 and who have requested and received a clearance specifying "VFR Conditions On Top" are requested to report their "actual" altitude as part of their IFR position reporting procedure and advise ATC prior to making an altitude change.

December 1964

PAGE II-22:

Add the following:

SPECIAL USE AIRSPACE

1. It is mandatory that pilots avoid unauthorized operation in prohibited areas and restricted areas and extremely important that warning areas not be penetrated unless prior approval has been obtained. The following explanation is to impress on all concerned the purpose of such areas and indicate that hazards are presented by activities within restricted and warning areas. Caution and intensive student jet training areas contain activity of interest to the nonparticipating pilot. The operations conducted within these areas are not considered hazardous and consist primarily of high volume military training. These five types of airspace are depicted on aeronautical charts published by the Coast and Geodetic Survey.

a. **Prohibited Area.** Airpsace identified by an area on the surface of the earth within which the flight of aircraft is prohibited. Such areas are established for security or other reasons associated with the national welfare. These areas are published in the Federal Register.

b. **Restricted Area.** Airspace identified by an area on the surface of the earth within which the flight of aircraft, while not wholly prohibited, is subject to restrictions. Activities within these areas must be confined because of their nature or limitations imposed upon aircraft operations that are not a part of those activities or both. Restricted areas denote the existence of unusual, often invisible, hazards to aircraft. Penetration of restricted areas during periods of activity may be extremely hazardous to the aircraft and

its occupants. Restricted areas are published in the Federal Register and constitute Part 73 of the Federal Aviation Regulations.

c. **Warning Area.** Warning areas are established beyond the three-mile limit. They are areas of defined dimensions established to contain both visible and invisible hazards to nonparticipating aircraft. Though the activities within the warning areas are as hazardous as those contained within restricted areas, warning areas cannot be legally designated because they are over international waters. Penetration of warning areas during periods of activity may be hazardous to the aircraft and its occupants. Official descriptions of warning areas may be obtained upon request to the FAA, Washington, D.C.

d. **Caution Area.** Areas of defined dimensions within which the military training activities conducted, though not hazardous, are of interest to nonparticipating pilots. There are no restrictions applicable to flight within these areas. Information concerning these areas may be obtained upon request to the FAA, Washington, D.C.

e. **Intensive Student Jet Training Area (ISJTA).** These areas are depicted on aeronautical charts to identify airspace utilized by the military for the intensive training of student jet pilots. There is no restriction to VFR flight in these areas. Information on these training areas may be obtained from any FSS within 100 miles of the area.

December 1964

PAGE II-25:

Change the material under RADAR TRAFFIC INFORMATION SERVICE, subparagraph c. "Issuance of Traffic Information" as follows:

Issuance of Traffic Information—Traffic information will include the following concerning a target which may constitute traffic for an aircraft that is:

(1) Radar identified:
   (a) Azimuth from the aircraft in terms of the twelve hour clock;
   (b) Distance from the aircraft in nautical miles;
   (c) Direction in which the target is proceeding; and
   (d) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffic; i.e., slow or fast moving.

   Example:

   Traffic 10 o'clock, 3 miles, west-bound (type aircraft and altitude, if known or relative speed of the observed traffic). The pilot may, upon receipt of traffic information, request a vector (heading) to avoid such traffic. The vector will be provided to the extent possible as determined by the controller.

(2) Not radar identified:
   (a) Distance and direction with respect to a fix;
   (b) Direction in which the target is proceeding; and
   (c) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffic, i.e., slow or fast moving.

   Example:

   Traffic 8 miles out of the airport northeast-bound, (type aircraft and altitude or relative speed of the observed traffic).

December 1964

PAGE II-25:

Change the material under TERMINAL RADAR SERVICE as follows:

TERMINAL RADAR SERVICE

(Provided in designated Terminal Radar Service Areas, TRSA).

1. This service has been implemented at certain terminal locations and is provided on a voluntary pilot participating basis.
2. The purpose of this service is to provide, to the extent possible separation between all participating VFR aircraft and all IFR aircraft operating within the airspace defined as the TRSA.
3. The TRSA is primarily a radar environment and control is predicated thereon, however, this does not preclude application of nonradar separation when required or deemed appropriate. During weather conditions equal to or better than basic VFR:
   (a) 500 feet vertical separation may be used between VFR aircraft and/or between VFR and IFR aircraft.
   (b) Visual separation may be used between VFR aircraft and/or between VFR and IFR aircraft when the pilot sees the other aircraft and reports he will maintain visual separation from it.
4. Within the TRSA traffic information on observed but unidentified targets will, to the extent possible, be provided all IFR and participating VFR aircraft and such aircraft, at the request of the pilot, will be vectored to provide standard radar separation from the observed traffic, insofar as possible.

December 1964

PAGE II-26.

Effective Jan 7, 1965 revise the material under APPROACH CONTROL a. Radar Approach Control, subparagraphs (2) and (3) and add new (4) as follows:

(2) IFR aircraft may be descended to the minimum vectoring altitude, vectored to a position in the airport traffic pattern and cleared for a "visual approach" whenever the reported ceiling is at least 500 feet above the minimum vectoring altitude and the visibility is three miles or more. With a "visual approach" clearance, the pilot operating on an IFR

flight plan may deviate from the prescribed instrument aproach procedure and proceed to the airport with visual reference to the surface, maintaining VFR conditions at all times. This procedure will afford a more expeditious service to arriving aircraft and preclude unnecessary vectoring in the final approach course of a published instrument approach procedure.

(3) Clearance for a visual approach is issued when:

preceding aircraft reports sighting the airport and the tower controller has the aircraft in sight, or

(b) An aircraft is positioned behind a preceding aircraft and the pilot of the succeeding aircraft reports sighting that aircraft.

(4) Radar separation is provided from any preceding IFR aircraft until the clearance for a visual approach is issued. Pilots cleared for a visual approach are reminded to advise ATC whenever they are unable to continue following the preceding aircraft and/or they encounter less than basic VFR weather conditions. Radar service will be terminated when the pilot is told to contact the tower. The tower will assign a landing sequence number.

December 1964

: II–30.

ıragraph 4. Change the last line to read "above the ort traffic area."

December 1964

ld the following:

EPORTING AIRCRAFT ACCIDENTS, INFLIGHT HAZARDS AND OVERDUE AIRCRAFT

'il Aeronautics Board, Safety Investigation Regulas, Part 320 (in part)).

OTIFICATION

The operator of an aircraft shall immediately, and he most expeditious means available, notify the Civil nautics Board, Bureau of Safety Field Office near- the accident or occurrence when:

(1) As a result of the operation of an aircraft, any on (occupant or nonoccupant) receives fatal or seri- injury or any aircraft receives substantial damage;

(2) Aircraft collide in flight;

(3) The following inflight hazards are experienced:

(a) Fire;

(b) Rapid decompression requiring emergency ac- :

(c) Unwanted or asymmetrical thrust reversal:

(d) Flight control system malfunction or failure:

(e) Inability of any required flight crew member erform his normal flight duties as a result of injury llness.

(f) An aircraft is overdue and is believed to have n involved in an accident.

b. The following information is required if available:

(1) Location;

(2) Date;

(3) Time;

(4) Aircraft make, model, and registration number and nationality;

(5) Names of operator and crew;

(6) Number of persons involved;

(7) Injuries of each person;

(8) Weather conditions;

2. REPORTS

a. The operator shall file a report on CAB Form 453 or 454, available from the Civil Aeronautics Board Field Offices, the Civil Aeronautics Board, Washington, D.C., and the Federal Aviation Agency Flight Standards District Office:

(1) Within ten (10) days after an occurrence for which notification is required in 1 (a) and (b) above;

(2) When, after seven (7) days, an overdue aircraft is still missing;

(3) Upon request of an authorized representative of the Civil Aeronautics Board;

b. Each crew member, if physically able at the time the report is submitted, shall attach thereto a statement setting forth the facts, conditions and circumstances relating to the accident or occurrence as they appear to him to the best of his knowledge and belief. If the crew member is incapacitated, he shall submit the statement as soon as he is physically able.

3. WHERE TO FILE REPORTS

a. The operator of an aircraft shall file with the Field Office of the Civil Aeronautics Board nearest the accident or occurrence any report required by this section involving:

(1) Aircraft having a maximum take-off weight of more than 12,500 pounds or rotorcraft regardless of weight.

(2) Aircraft having a maximum take-off weight of 12,500 pounds or less operated by an air carrier certificated to engage in air transportation in the State of Alaska; and

(3) Aircraft, regardless of maximum take-off weight, where fatal injuries have occurred to any occupant of such aircraft.

b. The operator of an aircraft shall file with the FAA Flight Standards District Office nearest the accident or occurrence any report required by this section involving fixed-wing aircraft with a maximum take-off weight of 12,500 pounds or less except reports which are required to be filed with the Board pursuant to paragraph A above. FAA Flight Standards District Offices are listed on last page of Section II in Airman's Information Manual.

AGE III-72:

nsert the following item in lieu of current entry:

New Flight Assistance Service Facility Tests

he FAA is testing a modernized FSS configuration field test of two new types of low cost facilities for ht assistance service at local airports. The tests will end through June 30, 1965.

ight Service Facility (FSF): An FSF is operated by FAA t service specialists during the busy hours of each . It is equipped with transmit/receive on 121.7 mcs. airport advisory service and 121.5 mcs. for emer-cy communications; weather observing instruments; ther teletypewriters; and communications into the system. FSFs provide airport advisory service request); aviation weather observations; pilot fing; and flight plan handling. Toll-free Communi-ons with the control FSS will be available 24-hours y. During the hours the FSF is operating, pilots ling or departing the FSF airport may contact the for airport advisory service when within 15 nauti-miles. Call and listen on 121.7 mcs. Use the name the FSF airport followed by the word "radio": mble Radio this is N1234V over."

he location of test FSF with control FSS in paren-is and local hours of FSF operation are:

Delta Municipal Airport, Delta, Utah (Salt Lake City FSS) 0600-1800.
Kimble County Airport, Junction, Texas (San Antonio FSS) 0600-1800.
Manhattan Municipal Airport, Manhattan, Kansas (Salina FSS) 0600-1800.
Crescent Beach Airport, Myrtle Beach, S. C. (Florence FSS) 0600-1800.

rport Information Desk (AID): An AID is an unmanned lity designed for pilot self-service briefing, flight ning and filing of flight plans. A desk and flight ning material will be available at all AID locations, lly during daylight hours. In addition, some AIDs have weather instruments and weather teletype-ers. Toll-free communications with the control FSS be available 24 hours daily.

he AID test sites with control FSS shown in paren-is are:

Aiken, South Carolina—(Florence, South Carolina)
Altus, Oklahoma—(Wichita Falls, Texas)
Aspen, Colorado—(Denver, Colorado)
Auburn, Alabama—(Montgomery, Alabama)
Frankfort, Kentucky—(Lexington, Kentucky (S/T)
Jamestown, New York—(Bradford, Pennsylvania)
Kerrville, Texas—(San Antonio, Texas)
Laconia, New Hampshire—(Montpelier, Vermont)
Lakeland, Florida—(Tampa, Florida)
Liberal, Kansas—(Garden City, Kansas)
Marion, Indiana—(Indianapolis, Indiana)
Mt. Vernon, Illinois—(St. Louis, Missouri)
Pittsfield, Massachusetts—(Albany,New York)
Ruidoso, New Mexico—(Roswell, New Mexico)
Tacoma Industrial Airport, Washington—(Seattle, Washington)
Twin Falls, Idaho—(Burley, Idaho)

Pilots are invited to use and evaluate these services. Comments and suggestions should be sent to:

●PAGE III-93—Add New Oil Burner Route

NEW YORK/VERMONT
CLEVER CHAP
Effective March 4, 1965
(Replaces Short Doll Route)

Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 290; descend cross 44°11'N, 75°52'W at FL 250 or above; cross 44°16'N, 75°47'W at FL 240; direct 44°22'N, 75°42'W; cross 44°22'N, 75°30'W at FL 190; cross 44°13'N, 75°12'W at 14,000' MSL; cross low level entry point 43°45'N, 74°48'W at 9000' MSL; maintain 9000' direct 43°39'N, 74°39'W direct 43°38'N, 74°30'W direct 43°35'N, 73°55'W descend to cross 43°34'N, 73°46'W at 7000' MSL maintain 7000' direct 43°31'N, 73°10'W left turn to 43°36'N, 73°01'W to 43°43'N, 73°05'W direct 44°33'N, 74°16'W descend to cross 44°37'N, 74°24'W at 5000' cross 44°37'N, 74°30'W at 4000' maintain 4000' to 44°28'N, 74°44'W descend to cross 44°26'N, 74°47'W at 3500' MSL; direct at 3500' MSL to enter bomb run corridor at 44°15'N, 75°05'W.

Short Look and Lay Down—After passing 44°15'N, 75°05'W aircraft shall operate through bomb run corridor between 1500' MSL and 5000' MSL. Minimum IFR altitude through the bomb run corridor is 3500' MSL (the bomb run corridor is 5 SM either side of centerline from 44°15' N, 75°05'W to 43°53'N, 75°41'W). After exiting the low level route at 43°53'N, 75°41'W aircraft shall turn right and climb so as to cross 43°52'N, 75°48'W at 6000' MSL. Maintain 6000' MSL direct 44°00'N, 75°51'W; direct 44°10'N, 75°51'W, direct 44°27'N, 75°22'W; climb cross 44°30'N, 75°17'W at 13,000' MSL or below; cross 44°41'N, 74°58'W at 14,000' (Burlington, Vt. VOR 298 radial) cross 44°39'N, 74°45'W at 16,000' (Massena, N.Y. VOR 197 radial); cross 44°35'30"N, 74°21'W at FL 200; climb to cross 44°33'30"N, 74°09'W at FL 230, maintain FL 230 direct 44°24'N, 73°11'W (Burlington, Vt. VOR).

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43°53'N, 75°41'W; turn right and climb so as to cross 43°52'N, 75°48'W at 6000' MSL; maintain 6000' direct 44°00'N, 75°51'W; direct 44°10'N, 75°51'W direct 44°22'N, 75°30'W direct 44°34'N, 74°57'W at 6000' MSL; turn right to 44°34'N, 74°48'W descending to cross 44°26'N, 74°47'W at 3500' MSL, thence via the Clever Chap route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and

rate between the VFR altitudes indicated between the owing points: From 44°37'N, 74°30'W to 43 53'N, 41'W. During daylight hours some VFR operations l be flown 800' above the immediate terrain. The er VFR altitude is the minimum altitude that will be ched on each route segment during daylight hours.

ternate Entry—Aircraft shall cross 43 57'N, 76 04'W atertown, N.Y. VOR) at FL 290; descend, cross 44°11' 55'52'W at FL 250 or above; cross 44 16'N, 75 47'W 'L 240; direct 44°22'N, 75°42'W; cross 44°22'N, 75 30' at FL 190. Cross 44°13'N, 75°12'W at 14,000' MSL; 'inue descend to cross 44°13'N, 74°41'W at 9000' MSL; ntain 9000' direct 44°13'N, 74°12'W; start descend, s 44°13'N, 74°04'W at 7000' MSL; maintain 7000' L direct 44°20'N, 73°58'W, thence via the Clever Chap :e.

ute Width—The entire low level route is reduced to d either side of centerline.

urs of Operation—0000Z to 2359Z Monday through Sun-

February 1965

GE III–96—Change Oil Burner Route

"FUNNY BOY"

Revised Effective March 4, 1965

d paragraph, line 5—

s 23°00'N, 71°33'W at FL 90 or below; cross 22°51'N, 8'W at 1400' MSL (the route entry point); maintain ' MSL direct 22°48'N, 70°58'W; turn right to 9'N, 70°53'W; direct 22°04'N, 71°03'W.

ort Look and Lay Down—After passing 22°04'N, 71°-7', aircraft shall maintain between 1400' and FL 30 ugh the bomb run corridor (5 SM either side of cen-ne from 22°04'N, 71°03'W to 21°10'N, 71°18'W). r exiting the route at 21°10'N, 71°18'W, aircraft l turn left, cross 21°03'N, 71°14'W at FL 30; main-FL 30 to 21°06'N, 71°08'W, direct 21°35'N, 71°00'W; t climb, cross 22°00'N, 71°02'W at FL 110 or above s 22°40'N, 71°06'W at FL 250 or above; left turn to 8'N, 71°16'W; cross 22°45'N, 71°30'W at FL 290 or signed.

Entry—line 3

r exiting the low level route at 21°10'N, 71°18'W, left cross 21°03'N, 71°14'W at FL 30; maintain FL o 21°06'N, 71°08'W; direct 22°01'N, 70°53'W; turn descend to cross 22°04'N, 71°03'W at 1400'; thence he published route.

February 1965

GE III–104—Change Oil Burner Route:

ZERO HOUR

Revised Effective March 3, 1965

rcraft shall cross 34°22'N, 105°40'30''W (Corona, Mexico VOR) (reporting point) at FL 250 or as ned by ATC, then descend direct to cross 34°33'N, 33'W at or below FL 230; then descend direct to 34°40'N, 105°28'W at FL 220; then descend direct ross 34°45'N, 105°12'W at or below 17,000' MSL; descend direct to cross 34°53'N, 104°48'W at 10,000'; then descend direct to cross the route entry point 47'N, 104°29' W at 7000' MSL, maintain 7000' MSL direct to 35°24'N, 104 08'W; then 7000' MSL direct to 36 22'N, 103 00'W; then 7000' MSL direct to 36 37'N, 102 49'W; then descend direct to cross 36 49'N, 102 40'W at 6000' MSL; then 6000' MSL direct to 37 06'N, 102°-27'W; then 6000' MSL direct to 37 36'N, 103 00'W.

Short Look and Lay Down—After passing 37 36'N, 103 -00'W, aircraft shall maintain between 6000' MSL and 7000' MSL thru the bomb run corridor (5 SM either side of centerline from 37 36'N, 103 00'W to 37 57'N, 103°-22'W to 38 06'N, 103 25'W). After exiting the route at 38 06'N, 103 25'W climb direct to cross 38 09'N, 103°-26'W at 8000' MSL, turn right, maintain 8000' MSL to 38 15'N, 103 10'W, then 8000' MSL direct to 38 02'N, 102 55'W, then climb direct to cross 37 53'N, 102 45'W at 9000' MSL, continue climb direct to cross 37 30'N, 103 08'W at FL 200; then maintain FL 200 direct to Tobe VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38 06'N, 103 25'W, climb direct to cross 38 09'N, 103 26'W at 8000' MSL, maintain 8000' MSL right turn to 38 15'N, 103 10'W, then 8000' MSL direct to 37 40'N, 102 30'W; then turn right descending to cross 37°24'N, 102°47'W at 6000' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 35°30'N, 104°01'W to 38°06'N, 103 25'W. During daylight hours, some VFR operations will be flown 500' above the immediate terrain. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain. The lower VFR altitude shown on the chart is the minimum that will be reached on each segment during daylight hours.

Alternate Entry—Aircraft shall cross 36°19'N, 101°51'W (Amarillo VORTAC 340/62) at FL 230, or as assigned by ATC, then descend direct to cross 36°34'N, 102°03'W at 17,000' MSL; then descend direct to cross 36°44'N, 102°-11'W at 14,000' MSL; then descend direct to cross 37°-06'N, 102°27'W at 11,000' MSL; then descend direct to cross 37°20'N, 102°42'W at 6000' MSL; thence via the published route.

Route Width—The route width from 34°47'N, 104°29'W to 35°24'N, 104°08'W is reduced to 5 SM on the east side of centerline, and from 37°36'N, 103°00'W, to 38°06'N, 103°25'W, the route is reduced to 5 SM on the west side of centerline.

Hours of Operation—24 hours daily, 7 days per week.

February 1965

PAGE IV–42—Change as follows:

Second column, second entry under state of Idaho—move MACKAY 1 SE to page IV–45 second column 8th entry from bottom and substitute MACKAY 1 SE for AMERICAN FALLS, AMERICAN FALLS 2 NE. The latter moves to page IV–42 second column, second item under state of IDAHO.

January 1965

U.S. GOVERNMENT PRINTING OFFICE : 1965 O - 762-825

AIRMAN'S INFORMATION MANUAL

NOTICES TO AIRMEN

SECTION III A

4 FEBRUARY 1965

FEDERAL AVIATION AGENCY

·336 O - 65 - 10

NOTICE TO SUBSCRIBERS

Many comments have been received from you, the subscribers, containing constructive criticism and offering many fine suggestions for improvement of the Airman's Information Manual (AIM). We appreciate your interest and initiative and assure you that we will evaluate each comment received for possible application to the manual. Each suggestion that furthers the purpose of the AIM and that is feasible on a cost vs. benefit basis, will be incorporated as soon as possible. In this regard, we must remember that each new feature added that increases the size of the manual and related production costs may result in increased subscription cost to be borne by you, the user. We, therefore, ask that you evaluate your suggestions on the basis of "need to know" vs "nice to have" and what you are willing to pay for. Also, information of value to you in your office or business that cannot be identified as having operational value to pilots, cannot be published.

Many of your comments reflect shortcomings on our part in explaining the innovations of the AIM. Some of you requested that the Air Navigation Radio Aids (ANRA) Section of the Airman's Guide be included in the AIM, as you constantly referred to this section for VOR frequency information, etc. It is obvious by your comments that this is one of the areas in which our explanation fell short and we will now try to rectify this situation.

In initial development of the manual, the main purpose has been that the AIM would be developed as a pilot's operational manual containing information that would supplement the data shown on charts. The AIM would contain terminal and preflight planning data, while charts would provide enroute data, to the fullest extent possible, to minimize the need to refer to other sources while enroute. This concept was proposed by you, the users. The next objective was to reduce duplication between charts and the AIM data as much as possible. This was to keep the cost of the AIM as low as possible and to establish a true relationship between the AIM and the charts.

Next to three-hole punching the Airman's Guide, the other most often asked for changes in the Airguide were enlargement of the type size (print) and consolidation of the many separate tabulations that had to be consulted to adequately flight plan. Nearly every comment on this latter item suggested all information in each tabulation be combined into a single listing of all data for each airport. This has been done as is reflected in Sections IV and IV–A. All items contained in the Airman's Guide ANRA Section have been included in the AIM, except for VOR and LF radio range information. For further clarification, the following tabulation indicates items, by title, contained in the Airman's Guide and their location in the AIM:

Airman's Guide	*AIM*
Radar Services (ASR, PAR)	Section IV–A (by airport)
ILS	Section IV–A (by airport)
Control Tower	Section IV–A (by airport)
VHF/DF	Section IV–A (by airport)
Flight Service Stations (FSS)	Section IV–A (complete listing)
ARTC Center Frequencies	Section IV–A (comple listing)
VOR Radiated Test Patterns (VOT)	Section IV–A (by a port)
Transponder Beacons (BCN)	Section IV–A (by a port)

(Included in Section IV–A of the AIM, but not p viously provided in Airguide, are identification of ra call and specific frequencies assigned to Approach C trol, Departure Control, Ground Control, Clearance D livery, Traffic Information Service, VFR Advisory Se ice, etc.).

Therefore, of all former ANRA data, only the V and LF radio range information has not been retained the AIM. Reasons for this decision are as follow

1. Enroute information should be published charts, to the extent possible. Radio ranges fall in t category of enroute aids (approach and letdown us ranges is provided for by Instrument Approach Char therefore, charts will be the primary user source this information.

a. The section of the AIM (IV–A) containing cility data is reproduced every 28 days on the identi cycle (effective date) as the Enroute Charts. Chan to NAVAIDs are applied directly to each revision Enroute Charts for use of the IFR pilot rather th published in AIM. Updating of NAVAID information the VFR pilots charts was provided for by the addi of the Visual Navigation Chart Bulletin in Section I (III–34) of the AIM. This Section, which is also p lished every 28 days, will indicate, cumulatively, changes to the NAVAIDS, etc., shown on the curr edition of each Sectional Chart, until the information published on the next issue of the particular chart. Th user requested feature provides the VFR pilot with t same cycle of currency of information (28 days) as IFR pilot.

2. Biweekly Notices to Airmen, Section III–A of AIM, and teletype NOTAMs update both the Enro Charts and the Visual Navigation Chart Bulletin tween AIM publication dates.

3. Application of the foregoing concept has, we lieve, provided the user with current and correct NAVAID data in a more desirable operationally u able form.

In developing this manual, the FAA has attempted provide for all user identified operational requirem to the fullest extent possible. It must be recognized th FAA has obligations to all aviation and that some r quirements applicable to a limited segment of aviati cannot fairly be accommodated at the expense (cost a volume) of all others.

The AIM will be in a test and evaluation status the next two years and will be revised to accommo new and changing evaluated user needs. The AIM published for the benefit of you, the user, and is su ject to change in accordance with your identified nee However, we ask that you give this new publication fair evaluation by becoming familiar with all its fe tures and uses. Following this period of indoctrinati please tell us what you want changed and what y want to stay as is.

Section III—A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the l. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or re-sd Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

E: Data printed entirely in bold face type are considered permt and will usually be cited only once. Such information ld be noted on charts and records. Temporary information is nerally cited until the condition is no longer in effect.

E: Data is arranged in alphabetical order by State (and within state by City or locality).

OR REVISED DATA: New or revised data are indicated by lining the first line of the affected item. The new information t necessarily limited to the underlined portion, which is used to attract attention to the new insert.

ALABAMA

'OC LA BATRE, BAY VIEW ARPT: Paved 3000' ag strip 75'S and parallel to turf rnwy. P-line each le of drag strip and wire across strip 75' from E end. /S turf rnwy under constr, covered with stumps not be used for acft operns.

)OKWOOD RDO: About March 4, VOR will be msnd. Ident: "BWA." Freq: 111.0 mc Class: L-VOR. Lctd at lat 33°14'22", long. 87°14'35". Varion 4°E. Monitoring category 1. Controlled by Birmingham FSS.

'HERINE, MARTIN FLD: Clsd until spring.

RUCKER: Extsv IFR and VFR student trng conicted in area bounded by V-115 W, V-241 S, V-70 N d V-241 E. Normal hrs of operns 0600-2400 Mon-Fri om surface to 10,000'.

MITH MUN ARPT: 319' (846' MSL) lgtd antenna twr constrd nmi NNE (030°T) at Lat 35°26'17" Long 94°17'09".

3ILE, BROOKLEY AFB: Caution, effective immedily and until further notice all aircraft are warned extensive high performance jet (F-105) traffic in the llowing area during dalgt hrs only: From the surce to 5000' MSL over the Mississippi Sound from a int 30°15'N, 88°04'W to a point 30°15'N, 88°50'W. ncerned aircraft will be flying a race track pattern tween the above listed coordinates for the purpose of ntour map/terrain avoidance radar calibration. herefore, the pilots in the F-105 aircraft will be ited to the amount of visual surveillance they can ve to air to air separation under VFR conditions.

.MA CRAIG AFB: Extsv jet student trng conducted ring dalgt hrs and occasional ngts Mon-Fri from surce to 6000' MSL. Craig ctl zone saturated dalgt hrs to 00' MSL during student trng. VFR acft should conct Craig twr on 236.6 or 119.5 mc for tfc advisories. raig Twr is avbl for lndg advisories for acft lndg Seld. Clsd excp for ofl bus. clsd to transit aero club acft.

TUSCALOOSA, VAN DE GRAAFF ARPT: 240' (462' MSL) lgtd chimney being constrd 3 nmi E (097° T) at lat 33°12'49, long. 87°32'45".

ARIZONA

BOUSE ARPT: Clsd until aprxly March 1965.

CAREFREE ARPT: Ben inop UFN.

ELOY—CASA GRANDE, IMPERIAL VALLEY CATTLE COMPANY OF ARIZONA 2 ARPT: New. Lctd 12 mi S Casa Grande. Lat 32°-42'42", long 111°41'48". Elev: 1525'. One rnwy E/W 5200 x 150' dirt. E apch restricted by p-line.

FT HUACHUCA: See Yuma Special Notice.

GILA BEND: See Yuma Special Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

MESA, FALCON FLD. Until Feb 20, 1965, small rocket test firing within one mile radius of a point 3 smi N maximum height 2,500 AGL. One day per week 1100 MST to 1500 MST. Contact Phoenix FSS for details.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hidensity jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi

radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000′ MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12–30 is 2900′.

SILVER BELL, CASA GRANDE IMPERIAL VALLEY CATTLE COMPANY OF ARIZONA 1 ARPT: New. Lctd 28 mi S of Casa Grande. Lat 32°28′17″, long. 111°45′09″. Elev: 1700′. One rnwy NW/SE 4200 x 200′ dirt. Attended 24 hrs. Associated FSS is Phoenix.

TUCSON, RYAN FLD: About Nov 16, all rnwys will be clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307. Efctv Jan. 15, 1964 to Jan 15, 1965 the flwg R–2303 Yuma East restricted area is established: Bndrys: beginning at 33°, 114°17′20″; thence N along State Highway 95 to 33°28′, 114°13′; 33°24′, 113°39′; 33°13′12″, 113°21′36″; 33°07′17″, 113°24′10″; 33°02′, 113°33′50″; 33°02′, 113°56′30″; 33°00′, 114°11′; to point of beginning. Designated Altitudes: 1500′ above the surface to 20,000′ MSL. Time of Designation: Continuous, Jan. 15, 1964 to Jan. 15, 1965. Controlling Agency: Federal Aviation Agency, Los Angeles ARTC Center. Using Agency: Commanding Officer, Yuma Proving Ground, Yuma Ariz.

ARKANSAS

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

WILSON ARPT: New. Lctd 1 mi W at lat 35°34′00″, long. 90°03′40″. Elev: 228′. One rnwy 2600′ turf. 80/87 fuel only. Unattended.

CALIFORNIA

BOULEVARD, ROUGH ACRES RANCH ARPT: Open to public. Lctd 2.5 smi N at lat 32°42′, long 116°16′. Elev: 3625′. One rnwy 5–23 2500 x 100′ dirt. Unattended.

BURBANK, LOCKHEED AIR TERMINAL TWR: Feb 1, ILS lclzr and glide slope rnwy 7 will be shutdown until aprxly Mar 5 for mod.

CORNING MUN ARPT: Clsd until aprxly Feb 10.

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EVERGREEN RDO: About Feb 4, H facility will be decomsnd.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″ clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: Rnwy lgts, REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HERLONG ARPT: New. Lctd 2 mi W of lat 40°08′20″, long 120°10′40″. Elev: 4050′. One rnwy 6–24 2500 x 30′ dirt. 80/87 fuel. Unattended. Rnwy soft when wet. Associated FSS is Reno, Nev.

HOUGHTON LAKE HEIGHTS, HOUGHTON LAKE STATE ARPT: Skis only during winter.

HYAMPON ARPT: Clsd UFN due flood.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repair. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LONG BEACH RDO: TACAN portion of VORTAC not usable for apchs to Los Alamitos NAS acct crs roughness.

LOS ANGELES ARTCC: En route radar service avbl 10 nmi radius Las Vegas VORTAC except unavailable V8 from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V5 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J10 FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles/Salt Lake City boundary. J11 FL 180–230 incl. from 30 miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles S Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is being conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-traveled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecasts for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes are spoken. Dissemination continues to be over the Los Angeles "HOMER"; also available by telephone over Sprint 6–1640, Poplar 2–4111, Davis 3–4626 and via a speaker "Listening-only" interphone circuit which parallels the present "fastline" circuit serving subscribers at Van Nuys Airport, Lockheed Air Terminal in Burbank, San Fernando Airport, Whiteman Air Park in Pacoima and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must call Stockton Apch Ctl prior to conducting IFR flight operations in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

POINT ARGUELLO: Civil acft desiring to transit W-289 call Navy Point Arguello on 122.5 mcs (guard 24 hrs) and listen for reply on 124.4 mcs.

ECREST, VALLEY VIEW ARPT: Clsd to the public.

ERSIDE MUN ARPT: Efctv Dec 10, 1964 Riverside ntrol zone will be efctv from 0500 to 2130 local time. l pilots must contact March Apch Ctl prior conducting R flight operns in the Riverside control zone.

TA BARBARA RDO: Width of Naples FM at interpt alt on ILS lclzr crs 320° or slightly wider than ndard ILS OM. During VOR outages or shutdowns r maintenance, flt checks reveal numerous usable nals being emitted by acft rdo shops in Los Angeles a on Santa Barbara VOR freq 114.9 mc are to be disarded.

ALIA MUN ARPT: Control zone will be efctv from -2100 lcl time. All pilots must contact Fresno ch Ctl prior to conducting IFR flight operns in the ntrol zone.

COLORADO

OMFIELD, JEFFERSON CO ARPT: First 3000' of wy 11 plus associated txwy clsd for resurfacing, uslength both directions 3000'. Ctc unicom for instrucns.

VER, LOWRY AFB: Ctld firing (demolition) area in e daily except Sat, Sun and holidays 1430–2330Z with a radius of 2500' of point lctd 104°41'11"W, 39°36'-"N up to 1000' above surface.

LE: Ctld firing for use of Camp Hale. Area is 5 i radius from point lat 39°27', long 106°19'20", x ordinate of firing 15,000' MSL. Time of use: tinuous 24 hrs daily. Controlling agency: Comnding General, Fort Carson.

OTT RDO: H facility ident: "ELL" decomsnd.

OVER RDO: About March 4, H facility will be comsnd.

RA, LAMA ARPT: Reactivated. Lctd 1.5 mi SE of lat 37°-30", long. 105°56'10". Elev: 7600'. Two gravel rnwys 3–3600 x 100 and 7–25 2500 x 200'. Rnwy 21 apch rected by p-line glide angle 0–1 rnwy 25 apch restricted trees. Associated FSS is Trinidad. (Formerly known as Sand Arpt).

BLO: Controlled Firing (demolition) area for use of Pueblo Ordnance Depot established within the folsing described area: bounded on N by lat 38°22'00"; long 104°21'22"; S, lat 38°18'00"; W, long 104°22'-'. Hrs of usage: 0900–1600 MST, Mon-Fri. Max alt 0' above the surface.

CONNECTICUT

ERBURY ARPT: Clsd.

DELAWARE

DLETOWN, SUMMIT AIR PARK: E/W rnwy clsd til aprxly April 1965.

MINGTON, GREATER WILMINGTON AIRPORT: c. No. ILS–1, Amdt. 8, efctv 8 Aug 64. During the iod of the West Chester VORTAC shutdown, the lowing temporary missed approach procedure will be effect: If visual contact not established upon descent authorized landing minimums, or if landing not acplished. make climbing left turn to 1600' and rn to Wilmington LOM. Hold South, one-minute ht turns, inbound crs. 014 degrees.

DISTRICT OF COLUMBIA

SHINGTON, MT VERNON: Low flying acft requested avoid immediate vcnty Mt. Vernon estate lctd W bank tomac River 10 mi S Washington Natl Arpt.

WASHINGTON NATL ARPT: The Weather Bureau and the Federal Aviation Agency will jointly institute a runway visibility observation program for runways 18, 36 and 15. Whenever the runway visibility system serving runway 36 is inoperative with visibility one and one half mile or less or runways 18 and 15 are in use for landing aircraft and the visibility is at or below one and one half mile an observer will be stationed at the approach end of the landing runway and will report visibility values manually in one quarter mile increments. These values shall be used in conjunction with reported ceiling and will be mandatory for the runway being served and should not be construed as runway visual range (RVR) values.

WASHINGTON NATL ARPT: JET POLICY FOR WASHINGTON NATIONAL AIRPORT—Due to limited ground handling facilities at the Washington National Airport, flight operations of only those turbojet aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, only approved types of turbojet aircraft of short or medium range (1) are engaged in corporate, private charter or rental type operations, and (2) solely intend to utilize the Airport's General Aviation ground service facilities. B. Currently approved types of medium and short range turbojet aircraft are as follows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. Short or medium range turbojet aircraft of types not listed above must secure advance authorization from the Airport Manager. Requests for such authorization should be made at least 48 hours in advance of the planned aircraft arrival at the Airport. D. Because of limited capabilities, the Airport cannot accomodate operations of turbojet aircraft for proficiency or practice take-off or landings.

FLORIDA

TRIPS TO HAITI, PUERTO RICO AND DOMINICAN REPUBLIC SPECIAL NOTICE: Non-commercial acft are prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergencyy fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

COCOA, CENTRAL BREVARD COUNTY ARPT: Fld will be clsd until aprxly Feb 2, 1965 for constr.

FT. MYERS, LEHIGH ACRES WEST ARPT: 995' (999' MSL) lgtd TV twr being constrd 6 nmi SE 129° T) at lat 26°35'09", long 81°37'53".

JACKSONVILLE, IMESON ARPT: Caution, all pilots making ILS apchs to arpt, a bridge lctd aprxly 1¼ mi SW of apch end of rnwy 5 lgtd very brightly at ngt, could give pilots false identification as being a rnwy especially during low ceilings or poor visibility conditions.

PENSACOLA: Intensive student conventional and jet VFR trng activity crossing V22 at 11,000' MSL btn Navy Saufley (NUN) VOR and Navy Whiting VOR 135 radial; and within a radius of 3 nmi Whiting NAAS and Saufley NAAS at and below 2500' MSL. Suggested alter course or altitude to avoid these areas. Radar VFR advisory service avbl on 119.0, 286.0 mc for acft eastbound or arriving from the E, or on 123.9, 281.8 for acft westbound or arriving from the west.

ST. AUGUSTINE-FAIRCHILD MUN ARPT: Rnwy 13–31 clsd until aprxly Jan 26, for resurfacing.

TAMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should ctc Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft rcvg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13–31 only rnwy in use. Threshold displaced 1215′ from end of rnwy 13 and 1000′ from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1960′.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless otherwise authorized, no person may operate an aircraft in the air corridor between R–2915A, R–2915B and R–2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

GEORGIA

CAIRO MUN ARPT: Clsd due constrn until aprxly May 1, 1965.

MORRISONVILLE, NORTHWAY ARPT: Rnwy plow during winter.

NEW YORK CITY: 1520′ rotating bcn atop Empi State Bldg lctd aprxly 11 mi NW JFK Arpts opers rotating basis dusk to midngt. From midngt to d break bcn in fixed position with light beamed dire S.

NEW YORK JOHN F. KENNEDY INTL TWR: Effe August 1, 1964, Kennedy Tower will begin an eva tion of a new "pre-taxi clearance" concept, which intended to provide departure aircraft with better se ice by permitting more expeditious handling redu frequency congestion and providing a better atmosph for receipt of the IFR clearance. Additionally, pa ticipating flights will normally remain on a sin control frequency from the time the aircraft commen taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clear Delivery, frequency, 121.65 mcs. This call shall made a maximum of ten (10) minutes prior to e mated taxi time. IFR clearance and departure rute currently in use shall be issued at this time. Time altimeter setting will be isued to all itinerant dep tures and to scheduled air carriers when requeste

2. Additional information shall also be issued a time of clearance delivery. This information shall sist of only that which will concern the departur craft. An example of this would be an advisory th departure delays are twenty (20) minutes and th turbojet aircraft should contact Ground Control pr to starting engines.

3. After clearance is received, aircraft shall return normal frequency use, i.e., contacting Ground Control 121.9 mcs, when ready to taxi. Pilots need not wait Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK, LA GUARDIA ARPT TWR: No control over vehicles operg on ramp areas. Runwy 4 ILS glide slope errs deviations may be encountered due to acft movements in close proximity to Glide Slope transmitter when wea conditions are 1000-3 or better.

NEW YORK, LA GUARDIA ARPT: FEE Clsd to jet propelled and motorless acft and acft over 105,000 lbs., unless prior permission of Arpt Mgr. ILS loclzr (runwys 4 and 22) inop until further notice.

NORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

OLIVE PARK: Clsd during winter months.

ONEIDA, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350' radius centered at lat 42°46'59"N and long 76°53'06"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with E'mira FSS.

TICONDEROGA ARPT: Clsd for duration winter season.

WATERTOWN MUN ARPT: Rnwy 1-19 clsd to all operns WN. Will not be maintained during winter months.

NORTH CAROLINA

ELIZABETH CITY MUN ARPT: Due to heavy VFR GA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth City Mun arpt contact Elizabeth City Coast Guard twr on 126.2 mc for tfc information. Acft without radio enter 500' pattern from the west.

FAYETTEVILLE, GRANNIS ARPT: Loclzr usable area confined to front crs and 35° either side. All other areas unusable.

FAYETTEVILLE, POPE AFB: Extensive operns to 5000' MSL 1200-2200Z Mon thru Fri. Pilots of all acft are advised that in an area from Lillington, N.C., north along arwy V3E 6 NM to Chalybeate, N.C., interclockwise west 12 NM to Broadway, N.C., thence NW 38 NM to Marston, N.C., thence E 26 NM to Rockfish, N.C., thence NE 27 NM back to Lillington: intensive training will be conducted W of V3E using navy four engine transport and prop jet (C-124 and C-130) acft, consisting of single, formation, and multiple formation flights. These acft oper 2,000' and below under VFR conditions, conducting low level (300' AGL to 2,000' MSL) runs in the maneuvering area described above, for troop and cargo drops into R-5311. Similar operations are conducted in the vicinity of Mackall AAF with drops at Mackall AAF.

HICKORY MUN ARPT: Rnwys 1-19 and 11-29 clsd due constrn.

NORTH DAKOTA

KEENE, NELSON ARPT: New. Lctd 5 mi NNE at lat 47°56'45", long 102 48'45". Elev: 2450'. One rnwy N/S 1400 x 200 Turf. N apch restricted by P-line. Glide angle 1 to 1.

LANGDON MUN ARPT: Rnwy lgts inop UFN. Open for ski acft only.

PEMBINA MUN ARPT: E/W rnwy clsd and constrn on rnwy 14-32 until aprxly Jul 15, 1965.

OHIO

CINCINNATI: Moored mrkd balloon will be flown day or ngt up to an alt 1500' MSL. Site of operns 7½ mi NE Greater Cincinnati Arpt and 6½ mi W Lunken Arpt. Balloon will be tethered aprxly ½ mi W of Cincinnati Union Trml Bldg.

LAKE MILTON, KOASIS RESORT ARPT: Clsd until further notice.

RAVENNA ARSENAL (APCO): Ctld firing for demolition purposes, when wea permits, during regular working hrs, Mon-Fri within the following area: bounded on S by lat 41°11'30", on N by lat 41°12'20"; E long 81°04'22"; W long 81°06'14". Demolition activities in this area will go no higher than 5000' MSL and only when ceiling of 10,000' or better and vsby 10 mi or more. Notams regarding activities conducted will be filed with FSS Akron Mun Arpt (telephone STadium 4-1246).

TOLEDO MUN ARPT: Clsd Suns to all itinerant acft btn 1400-2300 due to drag races all rnwys UFN.

OKLAHOMA

WOODWARD, WEST WOODWARD ARPT: 410′ (2446′ MSL) lgtd rdo twr constrd 9 nmi NNW (335°T) at lat 36°34′39″, long 99°35′40″.

YUKON, CIMARRON FLD: Use turf rnwy 17–35 only.

OREGON

The following arpts are clsd for an unknown duration, due to winter: Beaver Marsh; Stearns; Crescent Lake Flight Strip; Idanaha, Strantiam; Lake of the Woods; Lapine; Pinehurst.

SPECIAL NOTICE: Periodic AA firing (Warrenton Artillery Range), during dalgt hrs from surface to alt of 20,000′ in area bounded by 46°12′N, 124°10′ W thence 46°12′N, 123°59′20″W thence along a line one half mi E of shoreline to 46°02′N, 123°55′30″W thence 46°02′N, 124°10′W thence to point of beginning. Contact Portland or Hoquiam Rdo for actual firing dates.

BORING ARPT: New. Lctd 2 smi E at lat 45°26′, long 122°20′. Elev: 585′. One rnwy NE/SW 1400 x 50 Turf. Unattended.

CAVE JUNCTION, SPORTSMENS RANCH ARPT: Clsd until aprxly Mar 1, 1965.

ECHO, COOMS BUTTERCREEK ARPT: New. Lctd 9 smi W at lat 45°43′, long 119°22′. Elev: 990′ One rnwy N/S 1450 x 50 Turf. Minor A and P repairs. 80/87 Fuel only.

HEPPNER, KINZUA CORPORATION ARPT: New. Lctd 1.5 smi NNW at lat 45°23′, long 119°34′. Elev: 1750′. One rnwy N/S 2000 x 100 Dirt. Unattended.

LONG CREEK ARPT: New. Lctd 4 smi N at lat 44°46′, long 119°06′. Elev: 3800′. One rnwy N/S 3500 x 100 Dirt. Unattended.

PAISLEY, ZX RANCH ARPT: New. Lctd 2 smi at lat 42°43′, long 120°33′. Elev: 4250′. Two dirt rnwys 16–35 4700 x 200′ and 7–25 2200 x 200′. Unattended.

NORTH BEND ARPT: About 17 nmi N a [illegible] aluminum colored Vee shaped balloon 75,000 cubic capacity being used in logging operns during dlt hrs, maximum alt 1000′ MSL. During hrs darkness will be lowered to 100′ AGL.

PORTLAND, TROHS NEST ARPT: New. Lctd 8 mi SE at lat 45°25 long 122°26′. Elev: 780′. Two gravel rnwys 11–29 180 and 18–36 1200′. 100/130 fuel only. Minor A and P repairs. Caution—arpt soft when wet. Stay on gravel.

UMPQUA RIVER, SCOTTSBURG TO REEDSPORT: River canyon crossed by 4 electric power lines. Two on both banks mrkd by red lgts. Easternmost crossing also mrkd with 20″ orange aluminum balls spaced lgtd from both sides of the river.

UNITY, ELLINGSON LUMBER COMPANY ARPT: New. Lctd 0.5 nmi N at lat 44°27′, long 118°11′. Elev: 4800′. One rnwy E/W 2400 x 60 Dirt. Unattended.

PENNSYLVANIA

BRISTOL, 3–M AIRPORT: VOR Proc. No. 1, Orig., efctv 5 Sept 1964. During the period of the West Chester VORTAC shutdown, change transition from Ardmore VHF Int to read from "Temporary Ardmore VHF Int to PNE VOR".

COUDERSPORT, POTATO CITY ARPT: Clsd winter months.

HANOVER, DEVENER ARPT: Arpt will be clsd from Jan 1 to April 1, 1965 due to soft conditions and snow.

PHILADELPHIA INTL ARPT: Excavation 1 to 3′ deep, 100′ long and 150′ wide aprxly 30′ from apch end rnwy 27. Ant structure aprxly 5′ hi, 45′ long 217′ from apch end rnwy 27 UFN.

PHILADELPHIA, NORTH PHILADELPHIA ARPT: Rnwy 6–24 clsd until aprxly Feb 14, 1965.

PITTSBURGH, GREATER PITTSBURGH ARPT: Creek H facil comm Lctd on rnwy 10L extended cntrline 69 nmi from apch end rnwy. Lat 40°30′21″, long 80°25′17″. Elev: 1116′ MSL Mag variation 4°W. Freq: 219 kc. Ident: CRK. Class: MH

READING, GEN. SPAATZ AIRPORT: Proc. No. ILS 36, Amdt. 8, efctv 13 Oct 62. During the period of the West Chester VORTAC shutdown, change transition from Honeybrook Int to LOM (Final) to read from "Int. RDG Localizer Front course and the LRP inbound radial to LOM (Final)". ADF Proc. No. 1, Amdt. 1, efctv 22 Sept 62. During the period of the West Chester VORTAC shutdown, delete transition from "Honeybrook Int. to LOM (Final)."

SAYRE, CHEMUNG VALLEY ARPT: Clsd winter months due snow conditions.

TIONESTA, BENNINGER ARPT: Clsd due to snow [illegible]

SOUTH CAROLINA

CHARLESTON AFB/MUN ARPT: Rnwy 3–21 clsd from Jan 7 until aprxly Feb 15, 1965.

CHERAW MUN ARPT: Closed until aprxly March 1.

COLUMBIA, OWENS FLD: Clsd to all ngt transient operation.

SOUTH DAKOTA

ESTELLINE ARPT: Clsd during winter months.

MOBRIDGE RDO: State owned and operd VOR open 0700–1900, VFR use only. Class: L–VOR. Freq: [illegible] receivers 122.1. Ident: MBG. Lctd lat 45°38′57″ long 100°21′56″.

TENNESSEE

CAMDEN, BENTON COUNTY ARPT: New. Lctd 2 mi S of [illegible] 36°00′40″, long 88°07′56″. Elev: 468′. One rnwy 3–21

Asphalt 3500 x 75'. Gross acft weight brg capacity 30,000 lbs single gear.

GRFREESBORO MUN ARPT: Glider towing and soaring activity conducted dalgt hrs at and in vcnity arpt.

ASHVILLE, CUMBERLAND FLD: Hvy equipment crossing S end rnwy dalgt hrs Mon-Sat noon.

ION CITY, EVERETT-STEWART ARPT: 403' (744' MSL) lgtd TV twr being constrd 5 nmi NW (309°T) at lat 36°26'13" long 89°04'09".

STIN, MUELLER MUN ARPT: 1199' (2049') lgtd TV twr constrd 5.5 nmi WNW (287° T) at lat 30°19'33", long 97°47'58".

G SPRING: Due intsv jet tfc at Webb operg Mon-Fri during dalgt hrs it is suggested all acft operg VFR remain at or above 9000' MSL when traversing area encompassed by 15 nmi arc of BGS VOR, excluding any overlap of V-66, including area W along V-165 to point 20 nmi SW of BGS VOR, and an extsn E to include area bounded N by S bndry of Trng Area Webb AFB/Reese Three, bounded S by N bndry of V-66 to N-S line drawn through town of Loraine, Tex. Concentrated jet trng within 10 nmi radius of Colorado City Aux Arpt lctd aprxly 38 nmi E Big Spring. VFR student jet tfc crossing airways within radius of 60 nmi BGS VOR utilizing appropriate VFR hemispherical crossing for tfc advisories.

G SPRING HAMILTON FLD: Caution, all alt 3,600' MSL and above intensive jet tfc. T-37 tfc pattern alt t Webb AFB 3,600' MSL.

G SPRING HOWARD COUNTY ARPT. Caution, all lt 4,100' MSL and above, intensive jet tfc. T-37 tfc attern alt at Webb AFB 3,600' MSL.

OWNSVILLE, RIO GRANDE VALLEY INTL ARPT: nwy 13R-31L clsd except that lgt acft may be leared to land on rnwy 13R.

EAR SPRING ARPT: Civil acft requiring use of this d when military acft are in the tfc patn, should fly a ectangular patn with turns in the opposite direction rom the military patn and rock wings on downwind. 'atn should be flown at 1200' MSL until military tfc clear. Use rnwys only for lndgs. Rnwy 13-31 clsd fn.

ROE, MONTGOMERY CO ARPT: 304' (492' MSL) lgtd FM tr constrd 5 nmi E (098° T at) lat 30°20'07", long 95°19'31".

LLAS, LOVE FLD: Two bldgs being erected 5 nmi SE (144°T) at lat 32°47'00", long 96°47'50". Bldg A ax tmpry hgt 661' (1115' MSL). Completed bldg will e 595.5'. (1039' MSL). Bldg B will reach max tmpry gt 710' (1149' MSL) in Jan 1965. Completed bldg ill be 609.5' (1049' MSL).

IVER CITY ARPT: 350' (3830' MSL) lgtd rdo twr constrd 14 mi S (175°T) at lat 32°43'50", long 102°47'42".

INBURGH MUN ARPT: Rnwys rough. Use Caution.

WORTH, SAGINAW ARPT: 208' (1008' MSL) lgtd rdo twr constrd 11 nmi W (272° T) at lat 32°52'48", long 97°36'06".

MILTON MUN ARPT: 400' (1605' MSL) lgtd rdo twr constrd 1 nmi NNE (020° T) at lat 31°42'59", long 98°07'54".

NDO: Randolph AFB jet T-38 and T-33 acft will onduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs c.t.d by RSU freq 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 600' above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 300' MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress.

HOUSTON, COLLIER ARPT: 379' (437' MSL) lgtd rdo twr constrd 3 nmi WSW (253° T) at lat 29°52'10", long 95°30'57".

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft operns for unknown duration.

HOUSTON INTL ARPT: Inbnd flts etc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° etc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038 18[illegible] etc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT: Microwave twr under constr 1400' WSW 105' AGL will be obstn lgtd and painted.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1, Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controller airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

KINGSVILLE, KLEBERG CO ARPT: 400' (474' MSL) lgtd TV twr constrd 7.5 nmi E (090° T) at lat 27°33'02", long 97°52'35".

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000' MSL in this area. It this is not feasible, etc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; rcv on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

LIBERTY, HOUSE ARPK: 204' 237' MSL) lgtd rdo twr constrd 3.5 nmi W (277° T) at lat 30°03'32", long 94°47'05".

MIDLAND AIR TRML: Webb AFB T-38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS, acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000' MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

OZONE MUN ARPT: 200' (2626' MSL) lgtd rdo twr constrd 2 nmi S (172° T) at lat 30°41'54", long 101°11'42".

PERRYTON MUN ARPT: 300' (3168' MSL) lgtd rdo twr constrd 2 nmi WNW (284° T) at lat 36°24'34", long 100°47'39".

ROBSTOWN, NUECES CO. ARPT: 982.4' (1049' MSL) lgtd TV twr constrd 3 nmi E (090° T) at lat 27°46'50", long 97°38'03".

SAN ANGELO, MATHIS FLD: 260' (2170' MSL) lgtd rdo twr constrd 3.5 nmi N (5° T) at lat 31°24'41", long 100°28'29".

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42'00", long 98°33'50". Altitude: surface to 3000' MSL (1500' AGL). Time and use: 0830 to 1200 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000' MSL. Hvy conventional and jet instrument acrobatic and transition trng in SE quadrant btn V198 and V163 and V163W 60 nmi radius of Randolph Mon-Fri. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR/VFR penetrations and apcrs will be made from the La Vernia VOR to Randolph AFB. Should necessity dicate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

TEMPLE, DRAUGHON-MILLER ARPT: Runway 11–29 clsd until aprxly Mar 1, 1965.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

VICTORIA CO-FOSTER ARPT: 420' (540 MSL) lgtd rdo twr constrd 5 nmi SSW (204°T) at lat 28°46'32", long 96°57'12".

WICHITA FALLS AIR TRML: 203' (1212' MSL) lgtd rdo twrs/4/ constrd 3 nmi WSW (237° T) at lat 33°57'38", long 98°33'42".

UTAH

BRYCE CANYON ARPT: Rnwy 12–30 clsd UFN acct snow.

BRYCE CANYON, KANAB MUN ARPT: Rnwy lgts inoperative. Rotating beacon changed to white.

DELTA MUN ARPT: Clsd to all ngt operns 1800–0600 MST efctv Jan 1, 1965 UFN.

DUCHESNE MUN ARPT: Lndg may be unsafe when snow covered. No snow removal eqpmt or svc. during winter months.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N, 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

BARRE-MONTPELIER ARPT: Rnwy 5–23 clsd until aprxly Apr 15, 1965.

BRISTOL, MUN ARPT: Open winters. N/S rnwy will be plowed.

FAIR HAVEN MUN ARPT: Clsd for duration winter season.

MANCHESTER, EQUINOX ARPT: Clsd for duration winter season.

NEWPORT MUN ARPT: Rnwy 5–23 clsd until about May 1, 1965 due snow.

RUTLAND MUN ARPT: Rnwy 13–31 clsd winters.

VIRGINIA

DAHLGREN: Restricted Area R–6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR–SS, Mon-Fri.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.

FRONT ROYAL, STOKES FLD: Unattended until aprxly Mar 1, 1965.

MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.

ONANCOCK, JOHNSON FLD: 285' (317' MSL) lgtd rdo twr constrd 3 nmi ENE (068° T) at lat 37°43'02", long 75°41'01".

RICHMOND, RICHARD E. BYRD FLYING FLD: Rnwy 15–33 avbl only to scheduled DC–7, DC–6, turbo jet and local based military jet acft with prior arrangement with twr.

WASHINGTON

The following is a list of flds that are clsd November–May due to winter elements: Bandera Arpt; Easton Arpt; Enumclaw, Ranger Creek Arpt; Laurier, Arden Arpt; Leavenworth, Lake Wenatchee Arpt; Lester Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.

The following is a list of airports that are clsd until further notice (aprxly April or May): Davenport, La Crosse Mun, Lind, Northport-Lowry Mun and Metaline Falls-Sullivan Lake USFS.

BENGE, HARDER RANCH ARPT: New. Lctd 4.5 smi NW at lat 46°57', long 118° 11'. Elev: 1600'. One rnwy 15–33 Gravel and turf 4000 x 100'. North apch restricted by P-line Unattended.

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extendin gfor aprxly 2000' due to construction on it UFN.

KELLER, POOLER ARPT: New. Lctd 4 smi N at lat 48°05', long 118°41'. Elev: 1550'. One rnwy N/S 2500 x 30 Gravel Mountains E and W of rnwy. Unattended.

OAK HARBOR AIRPARK: New. Lctd 4 smi SSW at lat 48°16' long 122°35'. Elev: 140'. One rnwy 6–24 Turf 2600 x 100 80/87 and 100/130 fuel. Rnwy 24 apch restricted by P-line

OAKESDALE, BLACKS RANCH ARPT: New. Lctd 4.5 smi SE at lat 47°06', long 117°11'. Elev: 2550'. One rnwy N&S 2300 x 200' Turf. N apch restricted by p-line. Minor P repairs. 80/87 fuel. Unattended.

OTHELLO, TANGO AIRFLD: New. Lctd 2 smi SW at lat 46°47' long 119°13'. Elev: 965'. Two turf rnwys 3–21 1900 x 75' and 8–26 1900 x 75'. Rnwy 3 apch restricted by p-line Both apchs rnwy 8–26 restricted by p-lines. 80/87 fuel. Rnwy lgts avbl on req.

RENTON MUN ARPT TWR: Lgt gun signals not visible 195–300° at 1000' MSL beyond 2 mi.

ROCKY POINT: Awy Bcn site 618 (near Kelso) permly decmsd.

SEATTLE: Hi alt jet route J96–505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

COMA ARPT: Caution advised due to thawing and freezing all areas off blacktop soft. Do not land or taxi on soft areas. Constrn 700' NE rnwy 1. Watch for unlgtd poles 22' ht and constrn equipment.

WEST VIRGINIA

ARLESTON, KANAWHA ARPT: 349' (1449' MSL) lgtd bcst twr located 3 nmi SSW (211° T) at lo 38°19'15", long 81°36'31".

ARKSBURG, BENEDUM ARPT: Constr in progress rnwy 13-31, unlgtd.

NTINGTON, TRI-STATE ARPT: About Feb 8, ILS clsr will be shut down until aprxly Feb 14, 1965 for elctn.

WISCONSIN

MP DOUGLAS: Control area extension effective Feb 18, 1965 from 0745–1630 lcl time daily until further notice.

EN BAY, AUSTIN-STRAUBEL ARPT: 247.5' (837.5' MSL) lgtd tetrahedron constrd 4.5 nmi E (090° T) at lat 44°29'36", long 88°01'57".

NESVILLE: Efctv Jan. 1, 1965, control zone Sun thru Fri 0700 to 2330 and Sat from 0700 to 2000 local time.

E GENEVA ARPT: Two 176' AGL/1020' MSL/lgtd rdo twrs constrd 1 nmi NE (044° T) at lat 42°35'40", long 88°23'19".

LAND O LAKES, KINGS LAND O LAKES MUN ARPT: Clsd winter months. Rnwy lgts on req (Phone 547-3777.)

MANITOWISH WATERS ARPT: Clsd winters. No fuel until spring.

WEST SALEM, MAPLE GROVE ARPT: Clsd until April 15, 1965.

WYOMING

BILL, KETELSEN RANCH ARPT: New. Lctd 16 mi E at lat 43°-11'30", long 104°56'15". Elev: 4400'. One rnwy 12–31 Turf 2000 x 75'. Dogleg in rnwy NW/SE. Unattended.

KREMMERER MUN ARPT: Clsd UFN due winter fld conditions.

LA BARGE ARPT: New. Lctd 1 smi NW at lat 42°17'15", long 110°11'45". Elev: 6640'. One rnwy 18–36 Gravel and dirt 2400 x 75'.

PINE BLUFFS MUN ARPT: New. Lctd 4 smi SW at lat 41°09'12", long 104°07'41". Elev: 5138'. One rnwy 8–26 Gravel and Dirt 4800 x 50'.

VERSE, DILTS RANCH ARPT: Associated city name changed to BILL. Lctd 18 mi NW at lat 43°23'45", long 105°33'15". Elev: 4800'. One rnwy 10–28 Turf and dirt 2600 x 50'. Rnwy 10 apch restricted by TV ant. 100/130 fuel only. Unattended.

CHANGES/ADDITIONS TO AIM

¶ 1-4

The list of airborne check points and ground check points is published in Section III. VOT's are included with the airport information in Section IV A.

December 1964

¶ 1-5:

/OR Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

The terms VOR, VORTAC, and TACAN are, operationally, general terms covering the VHF and UHF omnidirectional bearing type of facilities without regard to the fact that the power, the frequency protected area, the equipment configuration, and operational requirements may vary between the facilities at different locations.

The table below lists the intended operational service volume or volumes of the various categories of VOR's, VORTAC'S, and TACAN's. Below 18,000 feet msl, the operational service volume of the H class facility has been limited to the L class service volume due to signal coverage characteristics of VHF and UHF facilities at the lower altitudes. T class facilities provide terminal service at locations where it is not practicable to provide L class frequency protection. Normal signal coverage and interference free service may be expected within the operational service volume unless specific facility restrictions have been imposed. Use of these facilities for IFR operations outside of the operational service volume without additional flight inspection is not intended and may result in undependable or inadequate indications in the cockpit.

lass of VOR, TAC, or TACAN	Operational Service Volume
Terminal)	25 nmi up to 12,000′ msl
Low altitude)	40 nmi up to 18,000′ msl
(High altitude)	40 nmi up to 18,000′ msl 130 nmi from 18,000′ msl 45,000′ msl 100 nmi above 45,000′ msl

December 1964

GE 1-24:

'nder TRANSCRIBED WEATHER BROADCASTS

.:

. Automatic transcribed broadcasts service is avail- e on class H facilities designated as:

a. **HSAB**—A class H radio beacon required for IFR radio navigation and/or airtraffic control and for automatic transcribed weather broadcast service. This class facility will be depicted on radio facility, Sectional and WAC' type charts.

b. **SABH**—A class H radio beacon having limited navigational use in that it is not flight inspected for IFR certification or primarily used for air traffic control. This aid will provide the automatic transcribed weather broadcast service and will be depicted on Sectional and WAC type charts, only.

4. Operation of either type facility will be essentially the same. Both will have a code identification sent at frequency intervals keyed simultaneously with the voice signals. Although, not essential, it may be advantageous to listeners to equip their receivers with a 1020 cycle code rejection filter which, when switched to the "voice" position, will silence the keyed code identification signal.

5. The AB (automatic transcribed service) component of HSAB's and SABH's will operate continuously except during those periods when the transcription equipment is inoperative. During these periods manual broadcasts, scheduled (H+45 hourly) and non-scheduled will be made.

February 1965

PAGE II-3—PARAGRAPH 3. DIRECT FLIGHTS.

b. The azimuth feature of VOR aids and the azimuth and distance (DME) features of VORTAC/TACAN aids are assigned certain frequency protected areas of airspace which are intended for application to established airway and route use, and to provide guidance for planning flights outside of established airways or routes. These areas of airspace are expressed in terms of cylindrical service volumes of specified dimensions called "class limits" or "categories." An operational service volume has been established for each class in which adequate signal coverage and frequency protection can be assured. To facilitate use of VOR, VORTAC or TACAN aids, consistent with their operational service volume limits, pilot use of such aids for defining a direct route of flight in controlled airspace should not exceed the following:

December 1964

¶ II-8:

Under 3. STANDARD INSTRUMENT DEPARRES (SIDs) add: paragraph d. "It will be the ponsibility of each pilot to accept or refuse the arance issued." Change present d. to e.

December 1964

¶ II-16:

IOLDING—Revise paragraph 6, last sentence to d: "Where the fix is associated with an instrument roach, and timed approaches are in effect, a procedure n shall not be executed unless the pilot advises ATC, e aircraft holding are expected to proceed inbound final approach directly from the holding pattern when roach clearance is received."

December 1964

¶ II-18:

IRCRAFT CLIMBING/DESCENDING Add new agraph:

d. If it is necessary during a climb or descent to level off at an intermediary altitude, advise ATC.

December 1964

¶ II-19—MILITARY CLIMB CORRIDOR RESTRICTED AIRSPACE.

he procedures in this paragraph become effective on uary 7, 1965.

hange title to read: "RESTRICTED AIRSPACE".

December 1964

¶ II-20:

OMMUNICATIONS, 1. g., after the example add following:

NOTE—Pilots in Alaska, Hawaii, U.S. Territories and possessions, operating at or above flight level 240 and who have requested and received a clearance specifying "VFR Conditions On Top" are requested to report their "actual" altitude as part of their IFR position reporting procedure and advise ATC prior to making an altitude change.

December 1964

¶ II-22:

dd the following:

SPECIAL USE AIRSPACE

t is mandatory that pilots avoid unauthorized operaion in prohibited areas and restricted areas and exremely important that warning areas not be penerated unless prior approval has been obtained. The ollowing explanation is to impress on all concerned he purpose of such areas and indicate that hazards re presented by activities within restricted and arning areas. Caution and intensive student jet raining areas contain activity of interest to the onparticipating pilot. The operations conducted vithin these areas are not considered hazardous and onsist primarily of high volume military training. hese five types of airspace are depicted on aeronauical charts published by the Coast and Geodetic urvey.

a. **Prohibited Area.** Airspace identified by an area on the surface of the earth within which the flight of aircraft is prohibited. Such areas are established for security or other reasons associated with the national welfare. These areas are published in the Federal Register.

b. **Restricted Area.** Airspace identified by an area on the surface of the earth within which the flight of aircraft, while not wholly prohibited, is subject to restrictions. Activities within these areas must be confined because of their nature or limitations imposed upon aircraft operations that are not a part of those activities or both. Restricted areas denote the existence of unusual, often invisible, hazards to aircraft. Penetration of restricted areas during periods of activity may be extremely hazardous to the aircraft and its occupants. Restricted areas are published in the Federal Register and constitute Part 73 of the Federal Aviation Regulations.

c. **Warning Area.** Warning areas are established beyond the three-mile limit. They are areas of defined dimensions established to contain both visible and invisible hazards to nonparticipating aircraft. Though the activities within the warning areas are as hazardous as those contained within restricted areas, warning areas cannot be legally designated because they are over international waters. Penetration of warning areas during periods of activity may be hazardous to the aircraft and its occupants. Official descriptions of warning areas may be obtained upon request to the FAA, Washington, D.C.

d. **Caution Area.** Areas of defined dimensions within which the military training activities conducted, though not hazardous, are of interest to nonparticipating pilots. There are no restrictions applicable to flight within these areas. Information concerning these areas may be obtained upon request to the FAA, Washington, D.C.

e. **Intensive Student Jet Training Area (ISJTA).** These areas are depicted on aeronautical charts to identify airspace utilized by the military for the intensive training of student jet pilots. There is no restriction to VFR flight in these areas. Information on these training areas may be obtained from any FSS within 100 miles of the area.

December 1964

PAGE II-25:

Change the material under RADAR TRAFFIC INFORMATION SERVICE, subparagraph c. "Issuance of Traffic Information" as follows:

c. **Issuance of Traffic Information**—Traffic information will include the following concerning a target which may constitute traffic for an aircraft that is:

(1) Radar identified:

(a) Azimuth from the aircraft in terms of the twelve hour clock;

(b) Distance from the aircraft in nautical miles;
(c) Direction in which the target is proceeding; and
(d) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffic; i.e., slow or fast moving.

Example:

Traffic 10 o'clock, 3 miles, west-bound (type aircraft and altitude, if known or relative speed of the observed traffic). The pilot may, upon receipt of traffic information, request a vector (heading) to avoid such traffic. The vector will be provided to the extent possible as determined by the controller.

(2) Not radar identified:
(a) Distance and direction with respect to a fix;
(b) Direction in which the target is proceeding; and
(c) Type of aircraft and altitude or, if unknown, the relative speed of the observed traffi, i.e., slow or fast moving.

Example:

Traffic 8 miles out of the airport northeast-bound, (type aircraft and altitude or relative speed of the observed traffic).

December 1964

E II-25:

hange the material under TERMINAL RADAR RVICE as follows:

TERMINAL RADAR SERVICE

vided in designated Terminal Radar Service as, TRSA).

his service has been implemented at certain terminal ocations and is provided on a voluntary pilot particiating basis.

The purpose of this service is to provide, to the xtent possible separation between all participating FR aircraft and all IFR aircraft operating within he airspace defined as the TRSA.

The TRSA is primarily a radar environment and ontrol is predicated thereon, however, this does ot preclude application of nonradar separation when equired or deemed appropriate. During weather onditions equal to or better than basic VFR:

(a) 500 feet vertical separation may be used between VFR aircraft and/or between VFR and IFR aircraft.
(b) Visual separation may be used between VFR aircraft and/or between VFR and IFR aircraft when the pilot sees the other aircraft and reports he will maintain visual separation from it.

Within the TRSA traffic information on observed nt unidentified targets will, to the extent possible, e provided all IFR and participating VFR aircraft nd such aircraft, at the request of the pilot, will be vectored to provide standard radar separation from the observed traffic, insofar as possible.

December 1964

PAGE II-26.

Effective Jan 7, 1965 revise the material under APPROACH CONTROL a. Radar Approach Control, subparagraphs (2) and (3) and add new (4) as follows:

(2) IFR aircraft may be descended to the minimum vectoring altitude, vectored to a position in the airport traffic pattern and cleared for a "visual approach" whenever the reported ceiling is at least 500 feet above the minimum vectoring altitude and the visibility is three miles or more. With a "visual approach" clearance, the pilot operating on an IFR flight plan may deviate from the prescribed instrument aproach procedure and proceed to the airport with visual reference to the surface, maintaining VFR conditions at all times. This procedure will afford a more expeditious service to arriving aircraft and preclude unnecessary vectoring in the final approach course of a published instrument approach procedure.
(3) Clearance for a visual approach is issued when:
preceding aircraft reports sighting the airport and the tower controller has the aircraft in sight, or
(b) An aircraft is positioned behind a preceding aircraft and the pilot of the succeeding aircraft reports sighting that aircraft.
(4) Radar separation is provided from any preceding IFR aircraft until the clearance for a visual approach is issued. Pilots cleared for a visual approach are reminded to advise ATC whenever they are unable to continue following the preceding aircraft and/or they encounter less than basic VFR weather conditions. Radar service will be terminated when the pilot is told to contact the tower. The tower will assign a landing sequence number.

December 1964

PAGE II-30.

Paragraph 4. Change the last line to read "above the airport traffic area."

December 1964

PAGE II-51

Add the following:

REPORTING AIRCRAFT ACC'DENTS, INFLIGHT HAZARDS AND OVERDUE AIRCRAFT

(Civil Aeronautics Board, Safety Investigation Regulations, Part 320 (in part)).

1. NOTIFICATION

a. The operator of an aircraft shall immediately, and by the most expeditious means available, notify the Civil

nautics Board, Bureau of Safety Field Office near- the accident or occurrence when:

(1) As a result of the operation of an aircraft, any on (occupant or nonoccupant) receives fatal or seri- injury or any aircraft receives substantial damage;

(2) Aircraft collide in flight;

(3) The following inflight hazards are experienced:

(a) Fire;

(b) Rapid decompression requiring emergency ac- ;

(c) Unwanted or asymmetrical thrust reversal;

(d) Flight control system malfunction or failure;

(e) Inability of any required flight crew member erform his normal flight duties as a result of injury lness.

(f) An aircraft is overdue and is believed to have involved in an accident.

The following information is required if available:

(1) Location;

(2) Date;

(3) Time;

(4) Aircraft make, model, and registration number nationality;

(5) Names of operator and crew;

(6) Number of persons involved;

(7) Injuries of each person;

(8) Weather conditions;

PORTS

The operator shall file a report on CAB Form 453 4, available from the Civil Aeronautics Board Field s, the Civil Aeronautics Board, Washington, D.C., the Federal Aviation Agency Flight Standards Dis- Office:

(1) Within ten (10) days after an occurrence for h notification is required in 1 (a) and (b) above:

(2) When, after seven (7) days, an overdue aircraft ill missing;

(3) Upon request of an authorized representative of ivil Aeronautics Board;

Each crew member, if physically able at the time eport is submitted, shall attach thereto a statement ng forth the facts, conditions and circumstances re- g to the accident or occurrence as they appear to to the best of his knowledge and belief. If the member is incapacitated, he shall submit the state- : as soon as he is physically able.

HERE TO FILE REPORTS

The operator of an aircraft shall file with the Field e of the Civil Aeronautics Board nearest the acci- or occurrence any report required by this section ving:

(1) Aircraft having a maximum take-off weight of more than 12,500 pounds or rotorcraft regardless of weight.

(2) Aircraft having a maximum take-off weight of 12,500 pounds or less operated by an air carrier certificated to engage in air transportation in the State of Alaska; and

(3) Aircraft, regardless of maximum take-off weight, where fatal injuries have occurred to any occupant of such aircraft.

b. The operator of an aircraft shall file with the FAA Flight Standards District Office nearest the accident or occurrence any report required by this section involving fixed-wing aircraft with a maximum take-off weight of 12,500 pounds or less except reports which are required to be filed with the Board pursuant to paragraph A above. FAA Flight Standards District Offices are listed on last page of Section II in Airman's Information Manual.

c. Civil Aeronautics Board field Safety Office addresses and telephone numbers are **Anchorage:** P.O. Box 2219, Anchorage, Alaska; BRoadway 2-7001. **Chicago:** Suite 206, 6525 North Avenue, Oak Park, Ill.; VIllage 8 9565. **Denver:** 1549 Emporia Street, Auroa, Colo.; EMpire 6-8249. **Fort Worth:** 100 North University Drive, University Plaza Building, Fort Worth 7, Tex.; EDison 6-2463. **Kansas City:** 912 East 63d Street, Kansas City, Mo. 64110; EMerson 3-2220 and 3-2221. **Los Angeles:** Los Angeles International Airport, 5820 Avion Drive, Room 228, Los Angeles 45, Calif.; SPring 6-0117. **Miami:** P.O. Box 48-4631, Miami International Airport, Miami 48, Fla.; TUxedo 5-2445. **New York:** Federal Building, Room 101, New York International Airport, Jamaica, Long Island, New York; 995-3333. **Oakland:** P.O. Box 2386, Oakland Airport Station, Oakland 14, Calif.; LOckhaven 8-1280. **Seattle:** Room 202, Administration Building, King County Airport, Seattle 8, Wash.; PArkway 3-9474.

PAGE IV-42—Change as follows:

Second column, second entry under state of Idaho—move MACKAY 1 SE to page IV-45 second column 8th entry from bottom and substitute MACKAY 1 SE for AMERICAN FALLS, AMERICAN FALLS 2 NE. The latter moves to page IV-42 second column, second item under state of IDAHO.

January 1965

AIRMAN'S INFORMATION MANUAL

NOTICES TO AIRMEN

SECTION III A

4 MARCH 1965

FEDERAL AVIATION AGENCY

SPECIAL NOTICE

Because of many requests, VOR, LF radio beacons and ranges, and ILS compass locators (LOM) data will be added to Section IVA of the AIM in a subsequent issue.

Section III–A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the AIM. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or revised Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

NOTE: Data preceded by a checkmark (✓) are considered permanent and will usually be cited only once. Such information should be noted on charts and records. Temporary information is continuously cited until the condition is no longer in effect.

NOTE: Data is arranged in alphabetical order by State (and within a State by City or locality).

NEW OR REVISED DATA: New or revised data are indicated by underlining the first line of the affected item. The new information is not necessarily limited to the underlined portion, which is used only to attract attention to the new insert.

ALABAMA

AYOU LA BATRE, BAY VIEW ARPT: Paved 3000' drag strip 75'S and parallel to turf rnwy. P-line each side of drag strip and wire across strip 75' from E end. N/S turf rnwy under constr, covered with stumps not to be used for acft operns.

OOKWOOD RDO: About March 4, VOR will be comsnd. Ident: "BWA." Freq: 111.0 mc Class: L-BVOR. Lctd at lat 33°14'22", long. 87°14'35". Variation 4°E. Monitoring category 1. Controlled by Birmingham FSS.

THERINE, MARTIN FLD: Clsd until spring.

RUCKER: Extsv IFR and VFR student trng conducted in area bounded by V–115 W, V–241 S, V–70 N and V–241 E. Normal hrs of operns 0600–2400 Mon-Fri from surface to 10,000'.

LMA CRAIG AFB: Extsv jet student trng conducted during dalgt hrs and occasional ngts Mon-Fri from surface to 6000' MSL. Craig ctl zone saturated dalgt hrs to 000' MSL during student trng. VFR acft should contact Craig twr on 236.6 or 119.5 mc for tfc advisories. Craig Twr is avbl for lndg advisories for acft lndg Selfield. Clsd excp for ofl bus. clsd to transit aero club acft.

SCALOOSA, VAN DE GRAAFF ARPT: 240' (462' MSL) lgtd chimney being constrd 3 nmi E (097° T) at lat 33°12'49, long. 87°32'45".

ARIZONA

GUILA, AMBROSIA ARPT: Abandoned.

USE ARPT: Clsd until aprxly March 1965.

REFREE ARPT: Bcn inop UFN.

HUACHUCA: See Yuma Notice.

LA BEND: See Yuma Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hi-density jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3–21 for unknown duration. Usable length lndg and tkof rnwy 12-30 is 2900'.

TUCSON, RYAN FLD: All rnwys clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy

eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307

ARKANSAS

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

CALIFORNIA

BURBANK, LOCKHEED AIR TERMINAL TWR: ILS lclzr and glide slope rnwy 7 shutdown until aprxly Mar 5 for mod.

CORNING MUN ARPT: Clsd

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EL MONTE, LOS ANGELES-EL MONTE ARPT: Efctv Mar 1, 1965 fld will be clsd to the general public.

EUREKA, KNEELAND ARPT: Caution, rnwy extremely soft, parking area unusable.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HYAMPON ARPT: Clsd UFN due flood.

KLAMATH, McBETH FLD: Clsd for unknown duration due flood damage.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles/Salt Lake City boundary. J11 FL 180–230 incl. from 50 miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is being conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-traveled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes are spoken. Dissemination continues to be over the Los Angeles "HOMER"; also available by telephone over Spring 6–1640, Poplar 2–4111, Davis 3–4626 and via a special "Listening-only" interphone circuit which parallels the present "fastline" circuit serving subscribers at Van Nuys Airport, Lockheed Air Terminal in Burbank San Fernando Airport, Whiteman Air Park in Pacoima and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must ctc Stockton Apch Ctl prior to conducting IFR flight operns in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

POINT ARGUELLO: Civil acft desiring to transit W-53 call Navy Point Arguello on 122.5 mcs (guard 24 hrs and listen for reply on 124.4 mcs.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200′ or slightly wider than standard ILS OM. During VOR outages or shutdown for maintenance, flt checks reveal numerous usable signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

COLORADO

DENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430–2330Z within a radius of 2500′ of point lctd 104°41′11″W, 39°36′30″N up to 1000′ above surface.

EAGLE: Ctld firing for use of Camp Hale. Area is nmi radius from point lat 39°27′, long 106°19′30″ max ordinate of firing 15,000′ MSL. Time of use continuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

HANOVER RDO: About March 4, H facility will be decomsnd.

PUEBLO: Controlled Firing (demolition) area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38°22′00″ E, long 104°21′22″; S, lat 38°18′00″; W, long 104°22′50″. Hrs of usage: 0900–1600 MST, Mon-Fri. Max alt 5000′ above the surface.

✓VERNON, STULTS ARPT: Abandoned.

CONNECTICUT

MARBOROUGH, LESNEWSKI FLD: Clsd to all acft until aprxly June 1, 1965.

WATERBURY ARPT: Clsd.

DELAWARE

MIDDLETOWN, SUMMIT AIR PARK: E/W rnwy clsd until aprxly April 1965.

DISTRICT OF COLUMBIA

WASHINGTON, MT VERNON: Low flying acft requested to avoid immediate vcnty Mt. Vernon estate lctd W bank Potomac River 10 mi S Washington Natl Arpt.

WASHINGTON NATL ARPT: JET POLICY FOR WASHINGTON NATIONAL AIRPORT—Due to

limited ground handling facilities at the Washington National Airport, flight operations of only those turbojet aircraft that meet the following criteria can be accomodated: A. Except under emergency conditions, only approved types of turbojet aircraft of short or medium range (1) are engaged in corporate, private charter or rental type operations, and (2) solely intend to utilize the Airport's General Aviation ground service facilities. B. Currently approved types of medium and short range turbojet aircraft are as follows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. Short or medium range turbojet aircraft of types not listed above must secure advance authorization from the Airport Manager. Requests for such authorization should be made at least 48 hours in advance of the planned aircraft arrival at the Airport. D. Because of limited capabilities, the Airport cannot accomodate operations of turbojet aircraft for proficiency or practice take-off or landings.

FLORIDA

RIPS TO HAITI, PUERTO RICO AND DOMINICAN REPUBLIC SPECIAL NOTICE: Non-commercial acft are prohibited from landing in HAITI, unless specific prior authorization is obtained. Seven working days are normally required to obtain clearance. Pilots planning to fly between the mainland and PUERTO RICO should plan their route to avoid unscheduled emergencvy fuel stops. Pilots planning to fly to the DOMINICAN REPUBLIC should refer to the International Flight Information Manual for complete details.

)'OA, CENTRAL BREVARD COUNTY ARPT: Clsd until further notice for constr.

T. MYERS, LEHIGH ACRES WEST ARPT: 995' (999' MSL) lgtd TV twr being constrd 6 nmi SE 129° T) at lat 26°35'09", long 81°37'53".

KISSIMMEE, AIR-LANDO ARPK: Clsd to the public.

ENSACOLA: Intensive student conventional and jet VFR trng activity crossing V22 at 11,000' MSL btn Navy Saufley (NUN) VOR and Navy Whiting VOR 135 radial; and within a radius of 3 nmi Whiting NAAS and Saufley NAAS at and below 2500' MSL. Suggested alter course or altitude to avoid these areas. Radar VFR advisory service avbl on 119.0, 286.0 mc for acft eastbound or arriving from the E, or on 123.9, 281.8 for acft westbound or arriving from the west.

ERRY-FOLEY ARPT: 500' (545' MSL) lgtd rdo twr being constrd 3 nmi E (080°T) at lat 30°04'19", long 83°31'28".

AMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should ctc Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft rcvg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

ALKARIA ARPT: Rnwy 13-31 only rnwy in use. Threshold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1960'.

ALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless otherwise authorized, no person may operate an aircraft in the air corridor between R-2915A, R-2915B and R-2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

WINTER HAVEN, CYPRESS GARDENS ARPT: Clsd to public for unknown duration.

GEORGIA

CAIRO MUN ARPT: Clsd due constrn until aprxly May 1, 1965.

COCHRAN ARPT: Clsd until aprxly May 1965.

✓MACON MUN ARPT: 203' (547' MSL) lgtd microwave twr constrd 8 nmi SSE (163° T) at lat 32°34'03", long 83°36'08".

ST. MARYS ARPT: Trash dump at ends of rnwys 19 and 22 attracts large flocks of seagulls. Frequent burning of trash reduces visibility on apch.

ALBUQUERQUE: "Cratering—uncased explosives" tests will be conducted 0700-1000M daily excp Sat and Sun. These ctld firings are conducted only during VFR wea conditions and ictd aprxly 8 mi SSE Kirtland AFB at lat 34°57'30", long 106°33'45". Soil clods may be thrown to a radius of 1000'.

HOBBS MUN ARPT: Rnwy 8-26 clsd until aprxly Mar 15, 1965.

LOS ALAMOS: Use of the airstrip at Los Alamos is limited to official purposes of the US Atomic Energy Commission and emgcy lndgs. Any unauthorized use will be considered trespass. Any lndgs on the Los Alamos Arpt, or other use of its facilities, by a private pilot who does not have written permission from the Atomic Energy Commission, shall be deemed for all purposes to be (1) an assumption of all risks and liabilities by such pilot in connection with his use of the Los Alamos Arpt, (2) a recognition and agreement that neither the United States of America, its cost-type contractors, or their officers, agents or employees has any obligation to such pilot to operate and/or maintain the airport or its facilities in a safe manner or condition, and (3) an agreement to sign a document reflecting the foregoing.

NEW YORK

ANTHONYS NOSE: Awy bcn site #4 will be permly decmnsd.

DUNKIRK RDO: MHW will be permly decmsnd.

KEESEVILLE ARPT: Clsd winters excp to skl acft.

MORRISONVILLE, NORTHWAY ARPT: Rnwy plowed during winter.

NEW YORK ARTCC. About Apr 4, freq 137.65 mc will be decmsnd.

NEW YORK CITY: 1520' rotating bcn atop Empire State Bldg ictd aprxly 11 mi NW JFK Arpts opers on rotating basis dusk to midngt. From midngt to day break bcn in fixed position with light beamed directly S.

NEW YORK, BROOKLYN SEAPLANE BASE: Clsd until aprxly May 1965.

NEW YORK JOHN F. KENNEDY INTL TOWER: August 1, 1964, Kennedy Tower began an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling reducing frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runway currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs., when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay ,and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK LA GUARDIA ARPT: Until Apr 25, 1965, arpt will be clsd to all acft operns from 2330 to 0700 EST Monday thru Saturday due to constrn.

NORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

ORCHARD PARK: Clsd until spring.

ROMULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350' radius centered at lat 42°46'59"N and long 76°53'06"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

STORMVILLE ARPT: Clsd UFN due to mud and slush.

TICONDEROGA ARPT: Clsd for duration winter season.

WARWICK MUN ARPT: Clsd until aprxly Jun 15 due to constrn.

WATERTOWN MUN ARPT: Rnwy 1–19 clsd to all operns UFN. Will not be maintained during winter months.

NORTH CAROLINA

CHARLOTTE, DOUGLAS MUN ARPT: Rnwy 18–36 clsd until aprxly May 1 due constrn.

ELIZABETH CITY MUN ARPT: Due to heavy VFR GCA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth City Mun arpt contact Elizabeth City Coast Guard twr on 126.2 mc for tfc information. Acft without radio enter 500' pattern from the west.

FAYETTEVILLE, POPE AFB: Extensive operns to 2,000' MSL 1200–2200Z Mon thru Fri. Pilots of all acft are advised that in an area from Lillington, N.C., north along arwy V3E 6 NM to Chalybeate, N.C., counterclockwise west 12 NM to Broadway, N.C., thence SW 38 NM to Marston, N.C., thence E 26 NM to Rockfish, N.C., thence NE 27 NM back to Lillington: intensive training will be conducted W of V3E using heavy four engine transport and prop jet (C–124 and C–130) acft, consisting of single, formation, and multiple formation flights. These acft oper 2,000' and below under VFR conditions, conducting low level (300' AGL to 2,000' MSL) runs in the maneuvering area described above, for troop and cargo drops into R-5311. Similar operations are conducted in the vicinity of Mackall AAF with drops at Mackall AAF.

NORTH DAKOTA

LANGDON MUN ARPT: Rnwy lgts inop UFN. Open for ski acft only.

MOHALL ARPT: Lgtg facils inop until spring.

PEMBINA MUN ARPT: E/W rnwy clsd and constrn on rnwy 14–32 until aprxly Jul 15, 1965.

OHIO

CINCINNATI: Moored mrkd balloon will be flown day or ngt up to an alt 1500' MSL. Site of operns 7½ mi NE Greater Cincinnati Arpt and 6½ mi W Lunken Arpt. Balloon will be tethered aprxly ½ mi W of Cincinnati Union Trml Bldg.

LAKE MILTON, KOASIS RESORT ARPT: Clsd until further notice.

RAVENNA ARSENAL (APCO): Ctld firing for demolition purposes, when wea permits, during regular working hrs, Mon-Fri within the following area bounded on S by lat 41°11'30", on N by lat 41°12'20", E long 81°04'22"; W long 81°06'14". Demolition activities in this area will go no higher than 5000' MSL and only when ceiling of 10,000' or better and vsby 10 mi or more. Notams regarding activities conducted will be filed with FSS Akron Mun Arpt (telephone STadium 4–1246).

TOLEDO MUN ARPT: Clsd Suns to all itinerant acft btn 1400–2300 due to drag races all rnwys UFN.

OKLAHOMA

ENID: Mon-Fri during dalgt hrs, in addition to intsv student jet operations being conducted within the areas designated on charts, intsv VFR student jet ops is conducted from gnd to 10,000' MSL within 5 nmi radius of Vance AFB and Kegelman Auxiliary (fld 23 nmi NW of Vance AFB). These areas should be avoided. Recommended acft arriving and departing Woodring Arpt in VFR condition utilize the following routes. From the west, cross directly over the town of

homa at 3500' MSL and maintain 3500' MSL via ay until within a three nmi radius of Woodring rt before starting descent. Departing Woodring rt W bound, climb to 3500' MSL within 3 nmi radius Woodring Arpt then proceed W bound over hiway il reaching the town of Lahoma maintaining 3500' L. To and from the S maintain 2300' MSL E of an ended N/S line to a point abeam the town of Bison. and from the N and E maintain 4000' MSL or w within 20 mi of Woodring Arpt. Low level jet igation missions now being performed at 1000' 500' AGL at 300 knots along the following routes: ce AFB: 8 nmi N of Fairview: Ft Supply; Darett: Briscoe; Strong City; Bridgeport; Enid. ce: 8 nmi N of Fairview; Knowles; Bucklin, Kans; elton, Kans; South Haven, Kans; Enid. Vance; ton, Vichy, Medicine Lodge, Kans; Rago, Kans; 1. Contact Vance Apch Control for tfc advisory 1-2400 Mon-Fri on 121.3 or rcv on 122.5 mc.

HOMA CITY, WILL ROGERS WORLD ARPT: N/S rnwy under constrn 1 mi E of existing N/S y. Clsd to all operns.

WATER, SEARCY FLD: Intermittent constrn in ress all rnwys until aprxly Aug 31, 1965.

S MUN ARPT: N/S rnwy clsd until July 1, 1965 nstrn turf rnwy.

N. CIMARRON FLD: Use turf rnwy 17–35 only.

OREGON

llowing arpts are clsd for an unknown duration, to winter: Beaver Marsh; Stearns; Cres- Lake Flight Strip; Idanaha, Strantiam; Lake of Woods; Lapine; Pinehurst.

AL NOTICE: Periodic AA firing (Warrenton Ary Range), during dalgt hrs from surface to alt 0,000' in area bounded by 46°12'N, 124°10' W e 46°12'N, 123°59'20''W thence along a line one mi E of shoreline to 46°02'N, 123°55'30''W thence 2'N, 124°10'W thence to point of beginning. Con- Portland or Hoquiam Rdo for actual firing dates.

S MUN ARPT: Rnwy lgts inop until further e.

KINGS, CRISSEY STATE LINE AIRSTRIP: clsd for unknown duration due damaged rnwy.

JUNCTION, SPORTSMENS RANCH ARPT: Clsd further notice.

H BEND ARPT: About 17 nmi N a moored inum colored Vee shaped balloon 75,000 cubic ft city being used in logging operns during dalgt maximum alt 1000' MSL. During hrs darkness be lowered to 100' AGL.

CA RIVER, SCOTTSBURG TO REEDSPORT: r canyon crossed by 4 electric power lines. Twrs oth banks mrkd by red lgts. Easternmost cross- also mrkd with 20'' orange aluminum balls spot from both sides of the river.

PENNSYLVANIA

ERSPORT, POTATO CITY ARPT: Clsd winter hs.

ERVILLE ARPT: Clsd to all transient acft until y Jan. 1966 due to banner towing.

SBURG, ADAMS COUNTY ARPT: Arpt will be ntermittently until Apr 1 due to soft fld conditions.

VILLE MUN ARPT: Clsd to wheeled acft

ER, DEVENE RARPT: Arpt will be clsd until 1, 1965 due to soft conditions and snow.

NEW ALEXANDRIA ARPT: Clsd until aprxly May 1, 1965.

PHILADELPHIA INTL ARPT: Excavation 1 to 3 ft deep, 100' long and 150' wide aprxly 30' from apch end rnwy 27. Ant structure aprxly 5' ht, 45' long, 217' from apch end rnwy 27 UFN.

PUNXSUTAWNEY MUN ARPT: Arpt clsd until futher notice due to constrn.

SOUTH CAROLINA

CHARLESTON AFB/MUN ARPT: Rnwy 3–21 clsd.

CHERAW MUN ARPT: Closed until aprxly March 15.

COLUMBIA ARPT: First 1000' rnwy 10 clsd during dalgt hrs due constrn

COLUMBIA, OWENS FLD: Clsd to all ngt transient operation.

LAKE CITY, BROWN ARPT: Rnwy 1–19 clsd until aprxly Apr 1 for resurfacing and extension on N end.

SOUTH DAKOTA

ESTELLINE ARPT: Clsd during winter months.

MOBRIDGE RDO: State owned and operd VOR operg 0700-1900, VFR use only. Class: L-VOR. Freq: 108.6. receivers 122.1. Ident: MBG. Lctd lat 45°33'07'', long 100°21'56''.

TENNESSEE

MURFREESBORO MUN ARPT: Glider towing and soaring activity conducted dalgt hrs at and in vcnty arpt.

NASHVILLE, CUMBERLAND FLD: Hvy equipment crossing S end rnwy dalgt hrs Mon-Sat noon.

TEXAS

AMARILLO: Controlled Firing Area lctd 10 mi NE of end of NE SW rnwy of Amarillo AFB/Mun: Lat 35°-21'09'', long 101°37'01'' E to 35°21'12'', 101°32'26'', S to 35°17'56'', 101°32'26'' W to 35°17'56'', 101°37'04'', N to point of beginning. Time of Use: 24 hrs per day. Altitudes: up to 3552'.

BEEVILLE (NAAS CHASE) RDO: During shutdown VOR (Mar 4 to Mar 8) Austwell Int will be usable as DME only.

BIG SPRING: Due intsv jet tfc at Webb operg Mon-Fri during dalgt hrs it is suggested all acft operg VFR remain at or above 9000' MSL when traversing area encompassed by 15 nmi arc of BGS VOR, excluding any overlap of V–66, including area W along V–16S to point 20 nmi SW of BGS VOR, and an extsn E to include area bounded N by S bndry of Trng Area Webb AFB/Reese Three, bounded S by N bndry of V–66, to N–S line drawn through town of Loraine, Tex. Concentrated jet trng within 10 nmi radius of Colorado City Aux Arpt lctd aprxly 38 nmi E Big Spring. VFR student jet tfc crossing airways within radius of 60 nmi BGS VOR utilizing appropriate VFR hemispherical crossing for tfc advisories.

BIG SPRING HAMILTON FLD: Caution, all alt 3,600' MSL and above intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600' MSL.

BIG SPRING HOWARD COUNTY ARPT. Caution, all alt 4,100' MSL and above, intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600' MSL.

BROWNSVILLE, RIO GRANDE VALLEY INTL ARPT: Rnwy 13R–31L clsd except that lgt acft may be cleared to land on rnwy 13R.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200′ MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13–31 clsd ufn.

DALLAS, LOVE FLD: Two bldgs being erected 5 nmi SSE (144°T) at lat 32°47′00″, long 96°47′50″. Bldg A max tmpry hgt 661′ (1115′ MSL). Completed bldg will be 595.5′. (1039′ MSL). Bldg B will reach max tmpry hgt 710′ (1149′ MSL). Completed bldg will be 609.5′ (1049′ MSL).

EDINBURGH MUN ARPT: Rnwys rough. Use Caution.

HONDO: Randolph AFB jet T-38 and T–33 acft will conduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs cntld by RSU freq 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 600′ above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 3000′ MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress. Non-scheduled dropping of personnel and equipment conducted from alt of 700′ to 1000′ above the surface on W side arpt Tues, Wed and Fri 1900–2300C and on Sat and Sun 1500–2100C.

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft operns for unknown duration.

HOUSTON INTL ARPT: Inbnd flts ctc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° ctc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on headings 038–188° ctc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN, HOOD AAF: A VFR Practice Instrument Apch Procedure has been published in a loose leaf format for use by USAF Training Command Pilots. Civil requests for this chart should be submitted to the Director, Coast and Geodetic Survey, Attn: Distribution Division, 14th and Constitution Avenue, Washington, D.C. 20230.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1. Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controlled airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

KILLEEN MUN ARPT: Clsd for rebuilding until aprxly May 15, 1965. Tmpry 1600′ sod strip avbl for use during dalgt hrs when dry.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000′ MSL in this area. It this is not feasible ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius Laredo. Use extreme caution due extsv jet trng.

✓LEVELLAND MUN ARPT: 235′ (3751′ MSL) microwave twr constrd 3 nmi NNW (347° T) at 33°35′16″, long 102°22′46″.

LUBBOCK MUN ARPT: N 400′ rnwy 17L–35R clsd ing constrn new E/W rnwy Usable lndg length directions 3000′.

MIDLAND AIR TRML: Webb AFB T-38 acft will making practice ILS apchs to transition from W 1 Intensive student jet trng area to the Midland acft will repart Webb 1 Intensive Student Jet area northbound at 12,000′ MSL descending to interc W course of the Midland ILS lclzr. All transition practice ILS apchs shall be during dalgt hrs in V conditions and only when Webb 1 Intensive Stud Jet trng Area is in use.

SAN ANTONIO, CAMP BULLIS: Controlled Firing A as follows: A circular area 1¼ smi in radius cente at lat 29°42′00″, long 98°33′50″. Altitude: surfac 3000′ MSL (1500′ AGL). Time and use: 0630 to hrs lcl time, Fri of each wk for destruction of ammu tion by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and c ventional acft making GCA apchs suggest all operg VFR that will traverse area N of Randolph main at least 10 nmi from the base and above MSL. Hvy conventional and jet instrument acro and transition trng in SE quadrant btn V198 and and V163W 60 nmi radius of Randolph Mon-Fri. jet tfc will be crossing V163 and V163W S of the of San Antonio at the appropriate hemispherical ing altitudes en route to Hondo Aux Arpt. Hvy VFR penetrations and apcrs will be made from the Vernia VOR to Randolph AFB. Should necessity flight in the close proximity of Randolph AFB, aircr should contact Randolph Tower on 126.2mcs for ad advisories.

TEMPLE, DRAUGHON-MILLER ARPT: Runway 1 clsd until further notice.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt 5 and ADF 1, Amdt. 5 are revised as follows effect immediately: Delete straight-in minimums.

UTAH

BRYCE CANYON ARPT: Rnwy 12–30 clsd UFN snow.

BRYCE CANYON, KANAB MUN ARPT: Rnwy 1 inoperative. Rotating beacon changed to white.

DELTA MUN ARPT: Clsd to all ngt operns 1800-0 MST UFN.

DUCHESNE MU NARPT: No snow removal equip svc, during winter months.

FLAMING GORGE DAM SITE: Cables and pwr l suspended from 2 twrs on W side to one twr on E of canyon across Green River aprxly 100′ higher canyon rim.

SALT LAKE CITY RDO: Test in progress using ARTCC area discrete frequency to extend VFR ground coverage. VFR flights in the Salmon-Ida area when unable to contact a nearby FSS thru normal channels may call Salmon Radio on 125.3 for flight assistance service. Salt Lake City FSS reply on 125.3 mc from the air/ground site at 45

'02'W, elevation 9104' MSL. Further information ontained in a letter to Airmen being distributed in area.

VERMONT

RE-MONTPELIER ARPT: Rnwy 5-23 clsd until xly Apr 15, 1965.

TOL MUN ARPT: Open winters. N-S rnwy will plowed.

PORT MUN ARPT: Rnwy 5–23 clsd until about May 65 due snow.

AND MUN ARPT: Rnwy 13–31 clsd winters.

VIRGINIA

GREN: Restricted Area R–6611, 6612, 6613 routine y air and surface firing presents extreme hazard cft all alts, SR-SS, Mon-Fri.

ORIA MUN ARPT: All lndg area lgts inop.

ELVOIR, DAVISON AAF: Experiments being con- ed in an area within a 1 mile radius of center t long. 77°08'16", lat 38°44'26". Rotary wing acft ld avoid this area and fixed wing acft stay above '. Extreme caution advised to all acft flying in UFN.

T ROYAL, STOKES FLD: Unattended until her notice.

INSVILLE ARPT: Quarry, 7 mi NNW of arpt mittent hvy blasting, dalgt hrs, hazardous to low g acft.

MOND, RICHARD E. BYRD FLYING FLD: y 15-33 avbl only to scheduled DC-7, DC-6, turbo and local based military jet acft with prior ar- ement with twr.

WASHINGTON

llowing is a list of flds that are clsd November– due to winter elements: Bandera Arpt; Easton ; Enumclaw, Ranger Creek Arpt; Laurier, Avery ; Leavenworth, Lake Wenatchee Arpt; Lester ; Oroville, Nighthawk Arpt: Packwood Arpt; omish Arpt; Stehekin Airfld.

llowing is a list of airports that are clsd until er notice (aprxly April or May): Davenport, La- e Mun, Lind, Northport-Lowry Mun and Metaline -Sullivan Lake USFS.

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extending for aprxly 2000' due to construction on fld UFN.

RENTON MUN ARPT TWR: Lgt gun signals not visible 195-300° at 1000' MSL beyond 2 mi.

SEATTLE: HI alt jet route J96-505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

WEST VIRGINIA

CLARKSBURG, BENEDUM ARPT: New rnwy 13–31 under constrn, unlgtd.

ELKINS, RANDOLPH COUNTY ARPT: Rnwy lgts (rnwy 13-31) inop indefinitely.

WISCONSIN

CHETEK MUN ARPT: All lndg area lgtg inop until aprxly Apr 15. Arpt open to ski equipped acft only.

CORNELL ARPT: Open to ski equipped acft only.

LADYSMITH, BUSH FLD: Open to ski equipped acft only.

LAND O LAKES, KINGS LAND O LAKES MUN ARPT: Clsd winter months. Rnwy lgts on req (Phone 547-3777.)

MADISON, TRAUX FLD: HI intensity rnwy lgts on rnwy 18-36 permly inop on Step 5.

MANITOWISH WATERS ARPT: Clsd winters. No fuel until spring.

MANITOWOC MUN ARPT: Rnwy 17–35 being extended to 5000'. Constrn in progress N end rnwy. Men and equipment in N apch area. Completion date expected about mid summer.

WEST SALEM, MAPLE GROVE ARPT: Clsd until April 15, 1965.

WYOMING

KREMMERER MUN ARPT: Clsd UFN due winter fld conditions.

LARAMIE RDO: About Mar 4, H facil will be permly decmsnd.

CHANGES/ADDITIONS TO AIM

4

e list of airborne check points and ground check nts is published in Section III. VOT's are in-ded with the airport information in Section IV A.

December 1964

4-5:

3 Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

: terms VOR, VORTAC, and TACAN are, operaally, general terms covering the VHF and UHF nidirectional bearing type of facilities without re-d to the fact that the power, the frequency pro-ted area, the equipment configuration, and operaal requirements may vary between the facilities different locations.

table below lists the intended operational service ume or volumes of the various categories of VOR's, RTAC'S, and TACAN's. Below 18,000 feet msl, operational service volume of the H class facility been limited to the L class service volume due to al coverage characteristics of VHF and UHF lities at the lower altitudes. T class facilities ride terminal service at locations where it is not cticable to provide L class frequency protection. mal signal coverage and interference free service be expected within the operational service volume ss specific facility restrictions have been imposed. of these facilities for IFR operations outside of operational service volume without additional t inspection is not intended and may result in ependable or inadequate indications in the cock-

of VOR, , or TACAN	Operational Service Volume
minal)	25 nmi up to 12,000′ msl
r altitude)	40 nmi up to 18,000′ msl
h altitude)	40 nmi up to 18,000′ msl 130 nmi from 18,000′ msl 45,000′ msl 100 nmi above 45,000′ msl

December 1964

-5:

e paragraphs 5 and 6 under Distance Measuring ent (DME) and substitute the following:

to the limited number of available frequencies, nment of frequency pairs has been required for certain military noncollocated VOR and TACAN facilities which serve the same area but which may be separated from a few to many miles. Additional frequency assignments have been made for remotely located military TACAN facilities which may be within reception range of a randomly paired ILS localizer. Selection of a DME channel while tuned to a randomly paired VOR or ILS frequency could result in the reception of distance information from a source which is remotely located from the VOR or ILS facility.

6. VOR/DME, VORTAC and ILS/DME facilities are readily identified by synchronized identifications which are transmitted on a time share basis. Identification of noncollocated VOR or ILS and TACAN facilities are not synchronized, resulting in intermixing and apparent distortion during TACAN identification whenever simultaneous aural monitoring of VOR or ILS and TACAN identification is attempted. DME equipment has been installed at only a few ILS locations and any DME presentation while using an ILS frequency which does not have an associated DME would be originating from a randomly paired remote location.

7. Aircraft receiving equipment which provides for automatic DME selection assures reception of azimuth and distance information from a common source whenever designated VOR/DME, VORTAC and ILS/DME navigation facilities are selected. Until further advised, pilots are cautioned to disregard any distance displays from automatically selected DME equipment whenever VOR or ILS facilities, which do not have the DME feature installed, are being used for position determination.

February 1965

PAGE I–24:

Under TRANSCRIBED WEATHER BROADCASTS add:

3. Automatic transcribed broadcasts service is available on class H facilities designated as:

a. **HSAB**—A class H radio beacon required for IFR radio navigation and/or airtraffic control and for automatic transcribed weather broadcast service. This class facility will be depicted on radio facility, Sectional and WAC type charts.

b. **SABH**—A class H radio beacon having limited navigational use in that it is not flight inspected for IFR certification or primarily used for air traffic control. This aid will provide the automatic transcribed weather

least service and will be depicted on Sectional and type charts, only.

Operation of either type facility will be essentially same. Both will have a code identification sent at ency intervals keyed simultaneously with the voice ls. Although, not essential, it may be advantageous teners to equip their receivers with a 1020 cycle rejection filter which, when switched to the "voice" on, will silence the keyed code identification signal.

The AB (automatic transcribed service) component AB's and SABH's will operate continuously except g those periods when the transcription equipment perative. During these periods manual broadcasts, uled (H+45 hourly) and non-scheduled will be

AIRMAN'S INFORMATION MANUAL

NOTICES TO AIRMEN

SECTION III A

EFFECTIVE 0501Z 18 MARCH 1965

To 0501Z 1 APRIL 1965

FEDERAL AVIATION AGENCY

Section III-A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the A. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or re-ed Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

E: Data preceded by a checkmark (✓) are considered permt and will usually be cited only once. Such information ld be noted on charts and records. Temporary information is uously cited until the condition is no longer in effect.

E: Data is arranged in alphabetical order by State (and within State by City or locality).

OR REVISED DATA: New or revised data are indicated by dining the first line of the affected item. The new information t necessarily limited to the underlined portion, which is used to attract attention to the new insert.

ALABAMA

OU LA BATRE, BAY VIEW ARPT: Paved 3000' ig strip 75'S and parallel to turf rnwy. P-line each le of drag strip and wire across strip 75' from E end. S turf rnwy under constr, covered with stumps not be used for acft operns.

NTLEY MUNI ARPT: Clsd UFN.

OOKWOOD RDO: VOR comsnd. Ident: "BWA." : 111.0 mc Class: L-BVOR. Lctd at lat 33°14'22", g 87°14'35". Variation 4° E. Monitoring category 1. trolled by Birmingham FSS.

ERINE, MARTIN FLD: Clsd until spring.

THAN MUN ARPT: Abandoned. All operns moved Napier Fld.

UCKER: Extsv IFR and VFR student trng conted in area bounded by V-115 W, V-241 S, V-70 N l V-241 E. Normal hrs of operns 0600-2400 Mon-Fri m surface to 10,000'.

NDERSON RDO: H facility decomsnd.

IA CRAIG AFB: Extsv jet student trng conducted ing dalgt hrs and occasional ngts Mon-Fri from sure to 6000' MSL. Craig ctl zone saturated dalgt hrs to 0' MSL during student trng. VFR acft should con- Craig twr on 236.6 or 119.5 mc for tfc advisories. ig Twr is avbl for lndg advisories for acft lndg Sel. Clsd excp for ofl bus. clsd to transit aero club acft.

'ALOOSA, VAN DE GRAAFF ARPT: 240' (462' L) lgtd chimney being constrd 3 nmi E (087° T) lat 33°12'49, long. 87°32'45".

ARIZONA

E ARPT: Clsd until aprxly Nov. 1965.

UACHUCA: See Yuma Notice.

BEND: See Yuma Notice.

GRAND CANYON NATIONAL PARK ARPT: Clsd for constr.

MARICOPA: CAUTION—DO NOT MISTAKE FOR LANDING AREA. Space Surveillance Stn at lat 33°06'31", long 112°01'46" aprxly 4 mi N. 1200' W and parallel to hwy. Site is strip 300' x 1800' with paved portion lengthwise thru cntr 100' in width and studded with 6' steel posts. This permanent hazard lctd 22 nmi S Phoenix-Sky Harbor Arpt.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hidensity jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the vcnty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3-21 for unknown duration. Usable length lndg and tkof rnwy 12-30 is 2900'.

TUCSON, RYAN FLD: All rnwys clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

YUMA. U.S. Army conducting SD-2 and SD-1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy

eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000′ MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307

ARKANSAS

✓ ALEXANDER, CLIFF PACKER ARPT: Clsd to the public.

FT. SMITH MUN ARPT: 156′ (769′ MSL) lgtd water twr being constrd 2 nmi NNW (335°T) at latitude 35°21′39″, longitude 94°23′05″.

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

CALIFORNIA

BAKER ARPT. Clsd for repairs UFN.

BURBANK, LOCKHEED AIR TERMINAL TWR: ILS lclzr and glide slope rnwy 7 shutdown.

✓ COD POINT SITE 1 LAX–BFL: Feb. 26, bcn site decomsnd.

CORNING MUN ARPT: Clsd

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

✓EL MONTE, LOS ANGELES-EL MONTE ARPT: Clsd to the general public.

EUREKA, KNEELAND ARPT: Caution, rnwy extremely soft, parking area unusable.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HYAMPON ARPT: Clsd UFN due flood.

KLAMATH, McBETH FLD: Clsd for unknown duration due flood damage.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles Salt Lake City boundary. J11 FL 180–230 incl. from 5 miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is being conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-traveled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecast for each route. Only those elements of enroute weather reports considered to be operationally significant for flight planning purposes are spoken. Dissemination continues to be over the Los Angeles "HOMER"; also available by telephone over Sprint 6–1640, Poplar 2–4111, Davis 3–4626 and via a special "Listening-only" interphone circuit which parallels the present "fastline" circuit serving subscribers at Van Nuys Airport, Lockheed Air Terminal in Burbank, San Fernando Airport, Whiteman Air Park in Pacoima and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must call Stockton Apch Ctl prior to conducting IFR flight operations in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

POINT ARGUELLO: Civil acft desiring to transit W-386 call Navy Point Arguello on 122.5 mcs (guard 24 hrs) and listen for reply on 124.4 mcs.

SANTA BARBARA RDO: Width of Naples FM at intercept alt on ILS lclzr crs 3200′ or slightly wider than standard ILS OM. During VOR outages or shutdowns for maintenance, flt checks reveal numerous useless signals being emited by acft rdo shops in Los Angeles Area on Santa Barbara VOR freq 114.9 mc are to be disregarded.

COLORADO

DENVER, LOWRY AFB: Ctld firing (demolition) area in use daily except Sat, Sun and holidays 1430–2330Z within a radius of 2500′ of point lctd 104°41′11″W, 39°30′30″N up to 1000′ above surface.

EAGLE: Ctld firing for use of Camp Hale. Area 5 nmi radius from point lat 39°27′, long 106°15′, max ordinate of firing 15,000′ MSL. Time of use continuous 24 hrs daily. Controlling agency: Commanding General, Fort Carson.

HANOVER RDO: H facility will be decomsnd.

✓ IDALIA, LANGENDOERFER ARPT: Abandoned.

PUEBLO: Controlled Firing (demolition) area for use of the Pueblo Ordnance Depot established within the following described area: bounded on N by lat 38°22′00″ E, long 104°21′22″; S, lat 38°18′00″; W, long 104°25′50″. Hrs of usage: 0900–1600 MST, Mon-Fri. Max ord 5000′ above the surface.

CONNECTICUT

MARBOROUGH, LESNEWSKI FLD: Clsd to a/c until aprxly June 1, 1965.

WATERBURY ARPT: Clsd.

DELAWARE

MIDDLETOWN, SUMMIT AIR PARK: E W rnwy until aprxly April 1965.

DISTRICT OF COLUMBIA

SHINGTON, MT VERNON: Low flying acft requested avoid immediate vcnty Mt. Vernon estate lctd W bank tomac River 10 mi S Washington Natl Arpt.

SHINGTON NATL ARPT: JET POLICY FOR ASHINGTON NATIONAL AIRPORT—Due to ited ground handling facilities at the Washington tional Airport, flight operations of only those turbo- aircraft that meet the following criteria can be ac- modated: A. Except under emergency conditions, ly approved types of turbojet aircraft of short or dium range (1) are engaged in corporate, private arter or rental type operations, and (2) solely in- d to utilize the Airport's General Aviation ground vice facilities. B. Currently approved types of dium and short range turbojet aircraft are as fol- s: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. ort or medium range turbojet aircraft of types not ed above must secure advance authorization from Airport Manager. Requests for such authorization uld be made at least 48 hours in advance of the ned aircraft arrival at the Airport. D. Because limited capabilities, the Airport cannot accomodate rations of turbojet aircraft for proficiency or prac- take-off or landings.

FLORIDA

S TO HAITI, PUERTO RICO AND DOMINICAN PUBLIC SPECIAL NOTICE: Non-commercial acft prohibited from landing in HAITI, unless specific r authorization is obtained. Seven working days normally required to obtain clearance. Pilots plan- g to fly between the mainland and PUERTO RICO uld plan their route to avoid unscheduled emer- cy fuel stops. Pilots planning to fly to the DO- NICAN REPUBLIC should refer to the International ht Information Manual for complete details.

CE: Florida Forest Service requests that all acft ld flying over forest fires in South Florida at low tudes due to the possibility of Forest Service Acft ns directing ground equipment over active fires.

A, CENTRAL BREVARD COUNTY ARPT: Clsd further notice for constr.

ESTVIEW RDO: VHF/DF recomsnd at new FSS on Bob Sikes Arpt. Freqs: 121.5, 122.1, on request 122.5, 125.1, 126.2, 126.7, 126.9, 134.1, 134.75, 9.

IYERS, LEHIGH ACRES WEST ARPT: 695' ' MSL) lgtd TV twr being constrd 6 nmi SE T) at lat 26°35'09", long 81°37'53".

GWOOD, SLADE ARPT: Clsd to public.

ACOLA: Intensive student conventional and jet trng activity cross V22 at 12,000' MSL btn y Saufley (NUN) VOR and Navy Whiting (NSE) 135 radial; and within a radius of 3 nmi Whiting S and Saufley NAAS at and below 2500' MSL. est course or altitude be altered to avoid these s. Radar VFR advisory service avbl on 119.0, 286.0 for acft eastbound or arriving from the E, or on), 281.8 for acft westbound or arriving from the .

Y-FOLEY ARPT: 500' (545' MSL) lgtd rdo twr constrd 3 nmi E (080°T) at lat 30°04'19", long 1'28".

ULA, SPRUCE CREEK ARPT: Clsd April 23, 24 25, 1965

SEBRING AIR TERMINAL: Tmpry FAA ctl twr and flight service will be provided while Sebring races in progress March 25-27 during the following hrs: March 25 from 0800 to 2100 EST. March 26 from 0700 to 1800 EST. March 27 from 0700 to 2400 EST. Tower will transmit on 118.8 mc, 121.5, 121.9 and will receive on 118.8 mc, 121.5, 121.9, 122.5 mc. Portion of race course 50' wide along W edge of N/S runwy and along N edge of E/W runwy marked by yellow cones. Easternmost 150' of N/S runwy and southernmost 150' of E/W runwy parallel to race course available for lndgs and tkoffs, all other runways clsd watch for lgt signals from old military ctl twr Extreme caution advised. Tmpry FSS will be set up in terminal bldg to handle flgt plans and pilot briefings. Acft are requested to call Sebring rdo on 122.1 mc and listen on 122.2 mc for this service.

TAMPA: VFR acft desiring radar ATC service in Tampa, St. Petersburg Area should cte Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft revg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13-31 only rnwy in use. Threshold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1980'.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0001 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless otherwise authorized, no person may operate an aircraft in the air corridor between R-2915A, R-2915B and R-2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted therein. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; however, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

WINTER HAVEN, CYPRESS GARDENS ARPT: Clsd to public for unknown duration.

GEORGIA

✓ ADEL COOK COUNTY ARPT: 243' (478' MSL) lgtd microwave twr constrd 2.5 nmi N (360°T) at lat 31°10'20", long 83°26'13".

CAIRO MUN ARPT: Clsd due constrn until aprxly May 1, 1965.

COCHRAN ARPT: Clsd until aprxly May 1965.

✓MACON, SMART ARPT: 220' (523' MSL) lgtd microwave twr constrd 3 nmi WNW (293°T) at lat 32°50'13", long 83°37'17".

ST. MARYS ARPT: Trash dump at ends of rnwys 19 and 22 attracts large flocks of seagulls. Frequent burning of trash reduces visibility on apch.

SAVANNAH, SAFFOLD FLD: 247.5' (253.5' MSL) and 254' (261' MSL) lgtd steel twrs being increased to 254' (261' MSL) and 279' (286' MSL) 4 nmi NNW (317°T) at lat 32°04'47", long 81°02'54".

SAVANNAH SAFFOLD ARPT: Clsd until further notice.

STATESBORO MUN ARPT: 1000′ S end rnwy 18–36 to intsxn of rnwy 13–31 clsd for unknown duration. Remaining rnwy rough usable length 4200′ both directions.

✓ TIFTON, MYERS ARPT: 293′ (653′ MSL) lgtd microwave twr constrd 3 nmi NW (316°T) at lat 31°27′40″, long 83°31′08″

IDAHO

BOVILL, HALLS HILLTOP ARPT: Clsd until aprxly May 1965.

CAYUSE CREEK USFS ARPT: Skiis only winter months.

COTTONWOOD MUN ARPT: Clsd during winter months.

CRAIGMONT ARPT: Clsd during winter months.

CAMAS COUNTY ARPT: Clsd for unknown duration.

CAREY MUN ARPT: Clsd for unknown duration.

DEARY ARPT: Clsd until aprxly May 1965 due winter conditions.

NEW YORK, BROOKLYN SEAPLANE BASE: Clsd until aprxly May 1965.

NEW YORK JOHN F. KENNEDY INTL TOWER: August 1, 1964, Kennedy Tower began an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better service by permitting more expeditious handling relieving frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally participating flights will normally remain on a ramp control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call should be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure data currently in use shall be issued at this time. The altimeter setting will be issued to all itinerant departures and to scheduled air carriers when requested.

2. Additional information shall also be issued at time of clearance delivery. This information shall consist of only that which will concern the departing aircraft. An example of this would be an advisory that departure delays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engines.

3. After clearance is received, aircraft shall go to normal frequency use, i.e., contacting Ground Control on 121.9 mcs., when ready to taxi. Pilots need not inform Ground Control of receipt of clearance. Heretofore, aircraft will become part of the departure sequence only after informing Ground Control that they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be directed to Ground Control and issued taxi clearance and then changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional delay because of non participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

EW YORK LA GUARDIA ARPT: Until Apr 25, 1965, arpt will be clsd to all acft operns from 2330 to 0700 EST Monday thru Saturday due to constrn.

ORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

RCHARD PARK: Clsd until spring.

OMULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when weather permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350' radius centered at lat 42°46'50"N and long 76°53'08"W. Demolition activities in the area will go no higher than 2000' MSL and only when ceiling of 5000' or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

SCHUYLERVILLE, GARNSEY'S LAND AND SEAPLANE BASE: Clsd winters.

RAVENNA ARSENAL (APCO): Ctld firing for demolition purposes, when wea permits, during regular working hrs, Mon-Fri within the following area: bounded on S by lat 41°11'30", on N by lat 41°12'20"; E long 81°04'22"; W long 81°06'14". Demolition activities in this area will go no higher than 5000' MSL and only when ceiling of 10,000' or better and vsby 10 mi or more. Notams regarding activities conducted will be filed with FSS Akron Mun Arpt (telephone STadium 4-1246).

TOLEDO MUN ARPT: Clsd Suns to all itinerant acft btn 1400-2300 due to drag races all rnwys UFN.

OKLAHOMA

ENID: Ctl zone efctv 0700-1800 lcl time Mon thru Thurs, 0700-2200 lcl time Fri; 0800-1600 lcl time Sat and 1200-1800 lcl time Sun. Ctl zone not designated on holidays.

ENID: Mon-Fri during dalgt hrs, in addition to intsv student jet operations being conducted within the areas designated on charts, intsv VFR student jet tfc is conducted from gnd to 10,000' MSL within 5 nmi radius of Vance AFB and Kegelman Auxiliary (lctd 23 nmi NW of Vance AFB). These areas should be avoided. Recommended acft arriving and departing Woodring Arpt in VFR condition utilize the following routes. From the west, cross directly over the town of Lahoma at 3500' MSL and maintain 3500' MSL via hiway until within a three nmi radius of Woodring Arpt before starting descent. Departing Woodring Arpt W bound, climb to 3500' MSL within 3 nmi radius of Woodring Arpt then proceed W bound over hiway until reaching the town of Lahoma maintaining 3500' MSL. To and from the S maintain 2300' MSL E of an extended N/S line to a point abeam the town of Bison. To and from the N and E maintain 4000' MSL or below within 20 mi of Woodring Arpt. Low level jet navigation missions now being performed at 1000' to 1500' AGL at 300 knots along the following routes: Vance AFB: 8 nmi N of Fairview; Ft Supply; Darronzett; Briscoe; Strong City; Bridgeport; Enid. Vance; 8 nmi N of Fairview; Knowles; Bucklin, Kans; Hazelton, Kans; South Haven, Kans; Enid. Vance; Clinton, Vichy, Medicine Lodge, Kans; Rago, Kans; Enid. Contact Vance Apch Control for tfc advisory 1200-2400 Mon-Fri on 121.3 or rcv on 122.5 mc.

✓ HONOBIA, CHRIST'S 40 ACRES ARPT: Rgt hand tfc pattern rnwy 26.

✓ NOWATA MUN ARPT: 279' (1074' MSL) lgtd rdo twr constrd 5.5 nmi S (179°T) at lat 36°36'40", long 95°06'30".

OKLAHOMA CITY, WILL ROGERS WORLD ARPT: New N/S rnwy under constrn 1 mi E of existing N/S rnwy. Clsd to all operns.

STILLWATER RDO. About May 15, VOR will be comsnd. Ident: "SWO". Freq: 108.4 mc. Class: T-BVOR. Lctd at lat 36°13'15", long 97°04'42". Variation 9° E. Monitoring category 1. Controlled by Oklahoma City FSS.

STILLWATER, SEARCY FLD: Intermittent constrn in progress all rnwys until aprxly Aug 31, 1965.

TIPON MUN ARPT: N/S rnwy clsd until July 1, 1965 reconstrn turf rnwy.

YUKON, CIMARRON FLD: Use turf rnwy 17-35 only.

OREGON

The following arpts are clsd for an unknown duration, due to winter: Beaver Marsh; Stearns; Crescent Lake Flight Strip; Idanaha, Strantiam; Lake of the Woods; Lapine; Pinehurst.

SPECIAL NOTICE: Periodic AA firing (Warrenton Artillery Range), during dalgt hrs from surface to alt of 20,000' in area bounded by 46°12'N, 124°10' W thence 46°12'N, 123°59'20"W thence along a line one half mi E of shoreline to 46°02'N, 123°55'30"W thence 46°02'N, 124°10'W thence to point of beginning. Contact Portland or Hoquiam Rdo for actual firing dates.

BURNS MUN ARPT: Rnwy lgts inop until further notice.

BROOKINGS, CRISSEY STATE LINE AIRSTRIP: Arpt clsd for unknown duration due damaged rnwy.

CAVE JUNCTION, SPORTSMENS RANCH ARPT: Clsd until further notice.

NORTH BEND ARPT: About 17 nmi N a moored aluminum colored balloon 92' long, approximately 40' diameter being used in logging operns during dalgt hrs, maximum alt 1000' MSL. During hrs darkness will be lowered to 100' AGL.

UMPQUA RIVER, SCOTTSBURG TO REEDSPORT: River canyon crossed by 4 electric power lines. Twrs on both banks mrkd by red lgts. Easternmost crossing also mrkd with 20" orange aluminum balls spot lgtd from both sides of the river.

PENNSYLVANIA

The following awry lgt hcns will be decmsnd on or about April 29, 1965: Bald Eagle Mountain, Site Number 52 (C-NY); Columbia Crossroads, Site Number 18 (B-BU); Hecla Cap, Site Number 53 (C-NY); Laurelton, Site Number 55 (C-NY); Ring Mountain, Site Number 60 (C-NY); Shunk, Site Number 16 B-BU).

COUDERSPORT, POTATO CITY ARPT: Clsd winter months.

CULMERVILLE ARPT: Clsd to all transient acft until aprxly Jan. 1966 due to banner towing.

GETTYSBURG, ADAMS COUNTY ARPT: Arpt will be clsd intermittently until Apr 1 due to soft fld conditions.

GREENVILLE MUN ARPT: Clsd to wheeled acft

HANOVER, DEVENE RARPT: Arpt will be clsd until April 1, 1965 due to soft conditions and snow.

NEW ALEXANDRIA ARPT: Clsd until aprxly May 1, 1965.

PHILADELPHIA INTL ARPT: Excavation 1 to 3 ft deep, 100' long and 150' wide aprxly 30' from apch end rnwy 27. Ant structure aprxly 5' hi, 45' long, 217' from apch end rnwy 27 UFN.

PUNXSUTAWNEY MUN ARPT: Arpt clsd until futher notice due to constrn.

WILKES-BARRE "AVP" VORTAC SHUTDOWN

About Apr 1, VORTAC will be shut down until aprxly Apr 12, 1965 for freq channel change to 111.6 mc/53. For substitute route structure during shutdown, use flwg:

		Low Altitude		
Airways	Existing Airways	Substitute Routes	MEA	MAA
V30.....	SAX VOR to ELM VOR	None

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN, HOOD AAF: A VFR Practice Instrument Apch Procedure has been published in a loose leaf format for use by USAF Training Command Pilots. Civil requests for this chart should be submitted to the Director, Coast and Geodetic Survey, Attn: Distribution Division, 14th and Constitution Avenue, Washington, D.C. 20230.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1. Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controlled airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

KILLEEN MUN ARPT: Clsd for rebuilding until aprxly May 15, 1965. Tmpry 1600' sod strip avbl for use during dalgt hrs when dry.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000' MSL in this area. It this is not feasible, ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; rcv on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

LUBBOCK MUN ARPT: N 400' rnwy 17L–35R clsd during constrn new E/W rnwy Usable lndg length both directions 3000'. Rnwy 12–30 clsd indefinitely.

MIDLAND AIR TRML: Webb AFB T–38 acft will be making practice ILS apchs to transition from Webb 1 Intensive student jet trng area to the Midland ILS, acft will repart Webb 1 Intensive Student Jet Trng area northbound at 12,000' MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42'00", long 98°33'50". Altitude: surface to 3000' MSL (1500' AGL). Time and use: 0830 to 1200 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000' MSL. Hvy conventional and jet instrument acrobatic and transition trng in SE quadrant btn V198 and V163 and V163W 60 nmi radius of Randolph Mon-Fri. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Aux Arpt. Hvy IFR/VFR penetrations and apcrs will be made from the La Vernia VOR to Randolph AFB. Should necessity dicate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

TEMPLE, DRAUGHON-MILLER ARPT: Runway 11–29 clsd until further notice.

TYLER, POUNDS FLD: ILS–13, Amdt. 5, ILS–31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

UTAH

BRYCE CANYON ARPT: Rnwy 12–30 clsd UFN acct snow.

BRYCE CANYON, KANAB MUN ARPT: Rnwy lgts inoperative. Rotating beacon changed to white.

DELTA MUN ARPT: Clsd to all ngt operns 1800-0[illegible] MST UFN.

DUCHESNE MU NARPT: No snow removal eqpmt or svc, during winter months.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air/ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N. 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

BARRE-MONTPELIER ARPT: Rnwy 5–23 clsd until aprxly Apr 15, 1965.

BRISTOL, MUN ARPT: Open winters. N/S rnwy will be plowed.

NEWPORT MUN ARPT: Rnwy 5–23 clsd until about May 1, 1965 due snow.

RUTLAND MUN ARPT: Rnwy 13–31 clsd winters. Rnwy 1–19 has low spots and catch basins 10' in from sides until aprxly Apr 15, 1965.

VIRGINIA

DAHLGREN: Restricted Area R–6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR–SS, Mon-Fri.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.

FRONT ROYAL, STOKES FLD: Unattended until further notice.

MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.

RICHMOND, RICHARD E. BYRD FLYING FLD Rnwy 15–33 avbl only to scheduled DC–7, DC–6, turbo jet and local based military jet acft with prior arrangement with twr.

WASHINGTON

The following is a list of flds that are clsd November 1 May due to winter elements: Bandera Arpt; Easton Arpt; Enumclaw, Ranger Creek Arpt; Laurier, Arpt; Leavenworth, Lake Wenatchee Arpt; Loma Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.

The following is a list of airports that are clsd until further notice (aprxly April or May): Davenport, La Crosse Mun, Lind, Northport-Lowry Mun and Metaline Falls-Sullivan Lake USFS.

VERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extending for aprxly 2000' due to construction on fld UFN.
ENTON MUN ARPT TWR: Lgt gun signals not visible 135–300° at 1000' MSL beyond 2 mi.
ATTLE: HI alt jet route J96–505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.
ANCOUVER, EVERGREEN FLD: Until aprxly May 4, constrn in progress dalgt hrs—rnwy surfacing on rgt side turf rnwy for first 1000' E of apch end rnwy and will be mrkd when work in progress.

WEST VIRGINIA

ARKSBURG, BENEDUM ARPT: New rnwy 13-31 under constrn, unlgtd.
KINS, RANDOLPH COUNTY ARPT: Rnwy lgts (rnwy 13–31) inop indefinitely.

WISCONSIN

AMP DOUGLAS: Control zone and control area extension 0745–1630 daily.
ETEK MUN ARPT: All ldg area lgtg inop until aprxly Apr 15. Arpt open to skl equipped acft only.
RNELL ARPT: Open to skl equipped acft only.
AND O LAKES, KINGS LAND O LAKES MUN ARPT: Clsd winter months. Rnwy lgts on req (Phone 547-3777.)
ADISON, TRAUX FLD: HI intensity rnwy lgts on rnwy 18–36 permly inop on Step 5.
ANITOWISH WATERS ARPT: Clsd winters. No fuel until spring.
ANITOWOC MUN ARPT: Rnwy 17–35 being extended to 5000'. Constrn in progress N end rnwy. Men and equipment in N apch area. Completion date expected about mid summer.
EBOYGAN COUNTY MEML ARPT: Rbn freq 254 kc. Ident: SEM, no voice, operd by County; lctd on arpt.
EST SALEM, MAPLE GROVE ARPT: Clsd until April 15, 1965.

WYOMING

KREMMERER MUN ARPT: Clsd UFN due winter fld conditions.
LANDER, HUNT FLD: Bcn inop indefinitely.
LARAMIE RBC: MIIW permly decmsnd.

MEDICINE BOW "MBW" VOR SHUTDOWN

About Apr 12, VOR will be shut down until aprxly Apr 17, 1965. For substitute route structure during shutdown, use flwg:

Low Altitude

V138...	MBW VOR to CYS VOR	MBW Int to CYS VOR via CYS VOR 291 rad	13,300	17,500

Existing Reporting Points	Temporary Reporting Points	MRA
MBW VOR.....	CKW VOR 070 rad and LAR VOR 324 rad	13,300
Morton Int	CYS VORTAC 316 rad 30 DME	9,000
Wheatland Int.....	None	
Alcova Int	CPR VORTAC 201 rad 22 DME	8,400

ROCK SPRINGS MUN ARPT: Clsd to all ngt operns and during IFR wea pending reletn threshold lgts rnwy 7–25.

•FOUR DIGIT BEACON CODE DESIGNATION

Effective April 1, 1965, ATC facilities will use FOUR-DIGIT beacon code designation in operation and administrative ATC application; e.g., code 10 becomes 1000, code 21 becomes 2100, code 23 becomes 2300, etc.

In today's air traffic control, aircraft are equipped with one of two basic types of airborne transponders having different select code capability on Mode A/3. One type has a 64 select code capability, using a combination of two digits; the other has a 4096 select code capability, using a combination of four digits. The operational difference between a 4096 select code transponder and the 64 select code transponder is that the 64 select code transponder transmits only two front digits of the 4096 code scale; e.g., 00 of 0000, 11 of 1100, 21 of 2132, 31 of 3100, etc.

To provide a standard means for ATC to utilize one or a combination of the 4096 discrete codes, including the 64 basic select codes, FOUR DIGIT CODE DESIGNATION will be used, e.g., code 2100 would be expressed as TWO ONE ZERO ZERO.

NOTE: Pilots of a 64 select code transponder equipped aircraft should disregard the last two numerals of the numbered code issued by ATC, e.g., if assigned code 2100, set in numerals 21.

Additionally, to facilitate handling of flight data, the letter suffix indicating aircraft transponder and/or DME equipment will be associated with the type of aircraft instead of aircraft identification.

It is most important that pilots, when filing a IFR flight plan for flight in an aircraft equipped with a radar beacon transponder (no code, 64 code, or 4096 code), DME equipment, or a combination of both, identify equipment capability by adding a suffix to the AIRCRAFT TYPE preceded by a slant, as follows:

/X (Transponder, no code)
/T (Transponder, with 64 code capability)
/U (Transponder, with 4096 code capability)
/D (DME)
/L (DME and transponder, no code)
/B (DME and transponder, with 64 code capability)
/A (DME and transponder, with 4096 code capability)

NOTE: The suffix is not to be added to the aircraft identification or be transmitted by radio as part of the aircraft identification.

CHANGES/ADDITIONS TO AIM

GE 1–4

The list of airborne check points and ground check points is published in Section III. VOT's are included with the airport information in Section IV A.

December 1964

GE 1–5:

VOR Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

The terms VOR, VORTAC, and TACAN are, operationally, general terms covering the VHF and UHF omnidirectional bearing type of facilities without regard to the fact that the power, the frequency protected area, the equipment configuration, and operational requirements may vary between the facilities at different locations.

The table below lists the intended operational service volume or volumes of the various categories of VOR's, VORTAC'S, and TACAN's. Below 18,000 feet msl, the operational service volume of the H class facility has been limited to the L class service volume due to signal coverage characteristics of VHF and UHF facilities at the lower altitudes. T class facilities provide terminal service at locations where it is not practicable to provide L class frequency protection. Normal signal coverage and interference free service may be expected within the operational service volume unless specific facility restrictions have been imposed. Use of these facilities for IFR operations outside of the operational service volume without additional flight inspection is not intended and may result in undependable or inadequate indications in the cockpit.

lass of VOR, TAC, or TACAN	Operational Service Volume
Terminal)	25 nmi up to 12,000' msl
Low altitude)	40 nmi up to 18,000' msl
High altitude)	40 nmi up to 18,000' msl 130 nmi from 18,000' msl 45,000' msl 100 nmi above 45,000' msl

December 1964

E 1–5:

elete paragraphs 5 and 6 under Distance Measuring ipment (DME) and substitute the following:

Due to the limited number of available frequencies, ssignment of frequency pairs has been required for certain military noncollocated VOR and TACAN facilities which serve the same area but which may be separated from a few to many miles. Additional frequency assignments have been made for remotely located military TACAN facilities which may be within reception range of a randomly paired ILS localizer. Selection of a DME channel while tuned to a randomly paired VOR or ILS frequency could result in the reception of distance information from a source which is remotely located from the VOR or ILS facility.

6. VOR DME, VORTAC and ILS DME facilities are readily identified by synchronized identifications which are transmitted on a time share basis. Identification of noncollocated VOR or ILS and TACAN facilities are not synchronized, resulting in intermixing and apparent distortion during TACAN identification whenever simultaneous aural monitoring of VOR or ILS and TACAN identification is attempted. DME equipment has been installed at only a few ILS locations and any DME presentation while using an ILS frequency which does not have an associated DME would be originating from a randomly paired remote location.

7. Aircraft receiving equipment which provides for automatic DME selection assures reception of azimuth and distance information from a common source whenever designated VOR/DME, VORTAC and ILS/DME navigation facilities are selected. Until further advised, pilots are cautioned to disregard any distance displays from automatically selected DME equipment whenever VOR or ILS facilities, which do not have the DME feature installed, are being used for position determination.

February 1965

PAGE 1–24:

Under TRANSCRIBED WEATHER BROADCASTS add:

3. Automatic transcribed broadcasts service is available on class H facilities designated as:

a. HSAB—A class H radio beacon required for IFR radio navigation and/or airtraffic control and for automatic transcribed weather broadcast service. This class facility will be depicted on radio facility, Sectional and WAC type charts.

b. SABH—A class H radio beacon having limited navigational use in that it is not flight inspected for IFR certification or primarily used for air traffic control. This aid will provide the automatic transcribed weather

dcast service and will be depicted on Sectional and C type charts, only.

Operation of either type facility will be essentially same. Both will have a code identification sent at ency intervals keyed simultaneously with the voice ls. Although, not essential, it may be advantageous steners to equip their receivers with a 1020 cycle rejection filter which, when switched to the "voice" ion, will silence the keyed code identification signal. The AB (automatic transcribed service) component SAB's and SABH's will operate continuously except g those periods when the transcription equipment operative. During these periods manual broadcasts, luled (H+45 hourly) and non-scheduled will be .

FEDERAL AVIATION AGENCY

57-269 O-65-1 IIIA

Section III–A—NOTICES TO AIRMEN

This section is issued every 14 days and is primarily designed to supplement Section III of the \. It contains appropriate notices from the daily NOTAM Summary, Airman Advisories, new or re-d Oil Burner Routes, hazardous airspace activities and other items considered essential to flight safety.

E: Data preceded by a checkmark (✓) are considered per-nt and will usually be cited only once. Such information d be noted on charts and records. Temporary information is nuously cited until the condition is no longer in effect.

:: Data is arranged in alphabetical order by State (and within tate by City or locality).

OR REVISED DATA: New or revised data are indicated by dining the first line of the affected item. The new information t necssarily limited to the underlined portion, which is used to attract attention to the new insert.

ALABAMA

OL' LA BATRE, BAY VIEW ARPT: Paved 3000' ıg strip 75'S and parallel to turf rnwy. P-line each ıe of drag strip and wire across strip 75' from E end. S turf rnwy under constr, covered with stumps not be used for acft operns.

NTLEY MUNI ARPT: Clsd VFN.

NOE, BACHELOR FLD: Permly clsd.

HERINE, MARTIN FLD: Clsd until spring.

RUCKER: Extsv IFR and VFR student trng con-ted in area bounded by V–115 W, V-241 S, V–70 N l V–241 E. Normal hrs of operns 0900–2400 Mon-Fri m surface to 10,000'.

MA CRAIG AFB: Extsv jet student trng conducted ing dalgt hrs and occasional ngts Mon-Fri from sur-e to 6000' MSL. Craig ctl zone saturated dalgt hrs to 0' MSL during student trng. VFR acft should con-t Craig twr on 236.6 or 119.5 mc for tfc advisories. ig Twr is avbl for lndg advisories for acft lndg Sel-d. Clsd exep for ofl bus. clsd to transit aero club acft.

ARIZONA

SE ARPT: Clsd until aprxly Nov. 1965.

UACHUCA: See Yuma Notice.

. BEND: See Yuma Notice.

ND CANYON NATIONAL PARK ARPT: Clsd for str.

RANA, W.B. RANCH ARPT: Clsd to the public.

ICOPA: CAUTION—DO NOT MISTAKE FOR NDING AREA. Space Surveillance Stn at lat 06'31'', long 112°01'46'' aprxly 4 mi N. 1200' W and allel to hwy. Site is strip 300' x 1800' with paved tion lengthwise thru cntr 100' in width and studded h 6' steel posts. This permanent hazard ictd 22 nmi hoenix-Sky Harbor Arpt.

PAYSON, BIRCH MESA ARPT: Clsd.

PHOENIX: Pilots on other than IFR clearances should avoid traversing the following areas: LUKE AFB: Between 1300 GMT and 0100 GMT Mon thru Sat hi-density jet tfc will be operg VFR on V66/V94 between longitude 113°45'W tnd longitude 112°18'W. Also on V461 from 5 miles S of BXK VOR to the GBN VORTAC at altitude 4000' thru 6000', 15,000' and 16,000' MSL. In addition, high performance climbs and descents are being made between 2500' and 16,000' MSL in an area S of V16, E of V461, N of V66/V94/V95 and W of longitude 112°18'W. WILLIAMS AFB: Due to intensive student jet traffic within the Williams Student Training Areas 1 thru 4 between sunrise and sunset Monday thru Friday it is suggested all acft operg VFR below FL240 within 75 nmi radius of Williams AFB between the Eastern edge of V105/V257 N of Phoenix and V16 S of Phoenix; and the N edge of V94 E of Toltec Intersection remain on airways and/or at the appropriate hemispherical altitudes below the base alts when traversing the trng areas (see appropriate En Route Charts). In addition, intensive jet tfc will be operg in the venty of V16/V95/V105 between 6 and 20 nmi S of Phoenix VORTAC at and below 3500' MSL and within a 5 mi radius of Coolidge-Florence Arpt exclusive of that portion overlying V16/V94 at and below 7000' MSL. Request all acft avoid over-flying Williams AFB control zone at all alts. In addition, caution should be exercised when flying below the base alts of Areas 1 thru 4 because of student jet trng acft transitioning to and from Williams AFB to the trng areas. VFR tfc may contact Blythe, Needles, Douglas, Phoenix, Prescott, Tucson, Yuma, Deming, Grants Truth or Consequences, and Zuni FSS for further info.

PRESCOTT MUN ARPT: Rnwy 12 clsd from apch end to int with rnwy 3-21 for unknown duration. Usable length lndg and tkof rnwy 12-30 is 2900'.

TUCSON, RYAN FLD: All rnwys clsd for constr. A tmpry dirt strip perpendicular to apch end rnwy 6 will be avbl during this period.

✓TUCSON, TUCSON COMPRESSOR STATION ARPT. Clsd to the public.

YUMA, U.S. Army conducting SD–2 and SD–1 pilotless-acft (drone) flts on a cont 24 hr basis, personnel and hvy eqpmt drops from cargo type acft on a cont dalgt to dark basis and intermittent ballistic missile and rocket launching to an alt of 20,000' MSL in the ctld firing area (W portion of former C–308) bounded on the W by line extending from the W bndry of R–2307 to V16, on N by V16, on the E by the Castle Dome Mtns and on S by R–2307

ARKANSAS

FT. SMITH MUN ARPT: 156′ (769′ MSL) lgtd water twr being constrd 2 nmi NNW (335°T) at latitude 35°21′39″, longitude 94°23′05″.

ROGERS MUN ARPT: Rnwy 8–26 clsd UFN.

TEXARKANA MUN ARPT: Daily demolition activity, lctd aprxly 18 mi W, Mon thru Fri from 1200 CST to 1330 CST and 1500 CST to 1615 CST. Shrapnel and shock waves up to 3000′.

CALIFORNIA

BAKER ARPT. Clsd for repairs UFN.

BOONEVILLE ARPT. Clsd due flood.

✓CALIPATRIA ARPT: Rnwy lgts inop UFN.

CLOVERDALE MUNI ARPT: Clsd due flood.

CORNING MUN ARPT: Clsd

EDWARDS, EDWARDS AFB RAPCON: VFR radar tfc info service avbl only to acft with opernl transponder.

EUREKA, KNEELAND ARPT: Caution, rnwy extremely soft, parking area unusable.

FT. ORD (FRITZSCHE AAF): Controlled Firing Area. Small arms, surface to 1500′ MSL, dawn to dusk daily. Area lctd immediately SW of R–2511 bounded by following coordinates: beginning at 36°37′42″, 121°48′47″; clockwise along the arc of 3-mi radius circle centered at 36°35′30″, 121°50′30″; to 36°34′45″, 121°47′24″; to 36°34′45″, 121°48′35″; 36°35′45″, 121°49′45″; to point of beginning. Controlling agency: Commanding Gen., Ft. Ord, Calif.

FRAZIER PARK, LINCOLN SKY RANCH ARPT: Closed for unknown duration.

HAWTHORNE ARPT: REIL and txwy lgts will be inop 2300–0700 nightly UFN.

HYAMPON ARPT: Clsd UFN due flood.

KLAMATH, McBETH FLD: Clsd for unknown duration due flood damage.

LINCOLN MUN ARPT: Rnwy 6–24 clsd for repairs. Glider operns week-ends; ctc on unicom. Arpt restricted to acft with less than 20,000 lbs GWT.

LODI ARPK: Clsd winter months.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. V105/V135 from 25 miles W Las Vegas VORTAC to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. J60, FL 180–230 incl., from 55 miles N Boulder VOR to Los Angeles/Salt Lake City boundary. J11 FL 180–230 incl. from 50 miles S Bryce VORTAC to Los Angeles/Salt Lake City boundary. J92 FL 180–230 incl. from 35 miles W Boulder VOR to Los Angeles/Salt Lake City boundary.

LOS ANGELES INTL ARPT: A 90-day test is being conducted by the LAX FSS to evaluate the effectiveness of a new concept in transcribed weather broadcast script. The new concept differs from present procedures in that meteorological and notice to Airmen Data is broadcast as applied to six commonly-travelled routes out of the Los Angeles Metropolitan area. Enroute weather reports follow the weather forecast for each route. Only those elements of enr[illegible] weather reports considered to be operationally sig[illegible] ficant for flight planning purposes are spoken. Dis[illegible] ination continues to be over the Los Ang[illegible] "HOMER"; also available by telephone over Sp[illegible] 6–1640, Poplar 2–4111, Davis 3–4626 and via a sp[illegible] "Listening-only" interphone circuit which parall[illegible] present "fastline" circuit serving subscribers at V[illegible] Nuys Airport, Lockheed Air Terminal in Burba[illegible] San Fernando Airport, Whiteman Air Park in Pac[illegible] and Rancho Conejo Airport near Thousand Oaks.

MODESTO CITY-COUNTY ARPT: All pilots must c[illegible] Stockton Apch Ctl prior to conducting IFR flight oper[illegible] in Modesto Ctl Zone. Transmit 122.5, receive 108.4.

NEEDLES–RIVERVIEW ARPT: Clsd to public UFN.

POINT ARGUELLO: Civil acft desiring to transit W[illegible] call Navy Point Arguello on 122.5 mcs (guard 24 hr[illegible] and listen for reply on 124.4 mcs.

SANTA BARBARA RDO: Width of Naples FM at [illegible] cept alt on ILS lclzr crs 3200′ or slightly wider th[illegible] standard ILS OM. During VOR outages or shutdow[illegible] for maintenance, flt checks reveal numerous usab[illegible] signals being emited by acft rdo shops in Los Ange[illegible] Area on Santa Barbara VOR freq 114.9 mc are to be d[illegible] regarded.

UPPER LAKE, GRAVELLY ARPT: Clsd due flood.

COLORADO

DENVER, LOWRY AFB: Ctld firing (demolition) area use daily except Sat, Sun and holidays 1430–2330Z wi[illegible] in a radius of 2500′ of point lctd 104°41′11″W, 39°[illegible] 30″N up to 1000′ above surface.

EAGLE: Ctld firing for use of Camp Hale. Area [illegible] nmi radius from point lat 39°27′, long 106°19′[illegible] max ordinate of firing 15,000′ MSL. Time of u[illegible] continuous 24 hrs daily. Controlling agency: Co[illegible] manding General, Fort Carson.

✓HANOVER RDO: H facility decomsnd.

PUEBLO: Controlled Firing (demolition) area for use the Pueblo Ordnance Depot established within the f[illegible] lowing described area: bounded on N by lat 38°22′ [illegible] E, long 104°21′22″; S, lat 38°18′00″; W, long 104°2[illegible] 50″. Hrs of usage: 0900–1600 MST, Mon-Fri. Max [illegible] 5000′ above the surface.

CONNECTICUT

BETHANY ARPT: Closed.

BURLINGTON, JOHNNYCAKE ARPT: Closed.

MARBOROUGH, LESNEWSKI FLD: Clsd to all [illegible] until aprxly June 1, 1965.

WATERBURY ARPT: Clsd.

DELAWARE

✓GEORGETOWN, SUSSEX CO ARPT: Rnwy 10-[illegible] 16-34 permly clsd.

MIDDLETOWN, SUMMIT AIR PARK: E-W rnwy cl[illegible] until aprxly April 1965.

DISTRICT OF COLUMBIA

WASHINGTON: Warning—all flights must avoi[illegible] Washington Prohibited Area P–56. See current [illegible] in Section III of this manual for location of P[illegible]

WASHINGTON, MT VERNON: Low flying acft req[illegible] to avoid immediate vcnty Mt. Vernon estate lctd W[illegible] Potomac River 10 mi S Washington Natl Arpt.

ASHINGTON NATL ARPT: JET POLICY FOR VASHINGTON NATIONAL AIRPORT—Due to imited ground handling facilities at the Washington ational Airport, flight operations of only those turbo-et aircraft that meet the following criteria can be ac-ommodated: A. Except under emergency conditions, nly approved types of turbojet aircraft of short or edium range (1) are engaged in corporate, private harter or rental type operations, and (2) solely in-end to utilize the Airport's General Aviation ground ervice facilities. B. Currently approved types of edium and short range turbojet aircraft are as fol-ows: 1. Jetstar 2. Sabreliner 3. Morane Saulnier C. hort or medium range turbojet aircraft of types not sted above must secure advance authorization from he Airport Manager. Requests for such authorization ould be made at least 48 hours in advance of the lanned aircraft arrival at the Airport. D. Because f limited capabilities, the Airport cannot accomodate perations of turbojet aircraft for proficiency or prac-ce take-off or landings.

FLORIDA

PS TO HAITI, PUERTO RICO AND DOMINICAN EPUBLIC NOTICE: HAITI, private acft landing or verflying Haiti must furnish 48 hours advance notice d a flight plan must be filed. Pilots planning to v between the mainland and PUERTO RICO ould plan their route to avoid unscheduled emer-ency fuel stops. Pilots planning to fly to the DO-INICAN REPUBLIC should refer to the International ight Information Manual for complete details.

TICE: Florida Forest Service requests that all acft oid flying over forest fires in South Florida at low titudes due to the possibility of Forest Service Acft erns directing ground equipment over active fires.

OA, CENTRAL BREVARD COUNTY ARPT: Clsd til further notice for constr.

LAUDERDALE: USN inert ordnance drops April May 21 from 2000' and under. Drops will take ace in two areas. Area 1—aprxly 2.2 miles offshore jus, Fla. Area 2—aprxly 20 miles offshore Hallan-le, Fla. Drops will be made btn 1130Z and 2100Z der VFR conditions only. Specific target area will marked by a white smoke pot when the drops are minent or in progress.

MYERS, LEHIGH ACRES WEST ARPT: 995' 60' MSL) lgtd TV twr being constrd 6 nmi SE 9° T) at lat 26°35'09", long 81°37'53".

SACOLA: Intensive student conventional and jet FR trng activity cross V22 at 12,000' MSL btn avy Saufley (NUN) VOR and Navy Whiting (NSE) OR 135 radial; and within a radius of 3 nmi Whiting AAS and Saufley NAAS at and below 2500' MSL. ggest course or altitude be altered to avoid these eas. Radar VFR advisory service avbl on 119.0, 286.0 c for acft eastbound or arriving from the E, or on 3.9, 281.8 for acft westbound or arriving from the est.

RY-FOLEY ARPT: 500' (545' MSL) lgtd rdo twr ing constrd 3 nmi E (080°T) at lat 30°04'19", long 31'28".

ISULA, SPRUCE CREEK ARPT: Clsd April 23, 24 d 25, 1965

IPA: VFR acft desiring radar ATC service in Tampa, . Petersburg Area should ctc Tampa apch ctl on freq 118.5 mc or 363.8mc. Acft revg this service and not operg to or from MacDill AFB may expect to be vectored as necessary to avoid publicized MacDill AFB area of hi density.

VALKARIA ARPT: Rnwy 13-31 only rnwy in use. Thres-hold displaced 1215' from end of rnwy 13 and 1000' from end of rnwy 31. Tkof and lndg lengths both rnwy 13 and 31 is 1000'.

VALPARAISO: SPECIAL AIR TRAFFIC RULE FOR VALPARAISO TERMINAL AREA—FAR Amendment 93-5 becomes efctv 0901 EST, Dec. 10, 1964. It specifies that btn SR and SS, Mon. through Sat., unless other-wise authorized, no person may operate an aircraft in the air corridor between R-2915A, R-2915B and R-2914, unless, before operating within the corridor, that person establishes communication with air traffic control (ATC) for the purpose of receiving an ATC advisory concerning operations being conducted there-in. These advisories will provide information which will permit pilots to select altitudes not being used for special military flight operations. Advisories may be obtained through any form of communications; how-ever, they may be obtained most readily by radio communications with Crestview Radio and Eglin Tower or Approach Control.

WINTER HAVEN, CYPRESS GARDENS ARPT: Clsd to public for unknown duration.

GEORGIA

AUGUSTA-BUSH FIELD: Procedure ILS-35, Amdt. 9, efctv 14 Dec 63 and Amdt. 10, efctv 3 Apr 65 are amended as follows, effective immediately: Add note, 300-¾ required when glide slope not utilized due steel tank contsruction.

CAIRO MUN ARPT: Clsd due constrn until aprxly May 1, 1965.

COCHRAN ARPT: Clsd until aprxly May 1965.

MACON, SMART ARPT: 233' (863' MSL) lgtd micro-wave twr constrd 11 nmi NNW (333°T) at lat 32°58'34", long 83°39'45".

ST. MARYS ARPT: Trash dump at ends of rnwys 10 and 22 attracts large flocks of seagulls. Frequent burning of trash reduces visibility on apch.

SAVANNAH, SAFFOLD FLD: 247.5' (253.5' MSL) and 254' (261' MSL) lgtd steel twrs being increased to 254' (261' MSL) and 279' (286' MSL) 4 nmi NNW (317°T) at lat 32°04'47", long 81°02'54".

SAVANNAH SAFFOLD ARPT: Clsd until further notice.

STATESBORO MUN ARPT: 1000' S end rnwy 18-36 to intsxn of rnwy 13-31 clsd for unknown duration. Re-maining rnwy rough usable length 4200' both direc-tions.

IDAHO

BOVILL, HALLS HILLTOP ARPT: Clsd until aprxly May 1965.

CAYUSE CREEK USFS ARPT: Skiis only winter months.

CAMAS COUNTY ARPT: Clsd for unknown duration.

CAREY MUN ARPT: Clsd for unknown duration.

DEARY ARPT: Clsd until aprxly May 1965 due winter conditions.

ELK RIVER ARPT: Clsd aprxly May 1965 due winter months.

HORSE HEAVEN USFS ARPT: Skiis only winter months.

MAGIC RESERVOIR AIR STRIP: Clsd for unknown duration.
MAGEE USFS ARPT: Skis only winter months.
RICHFIELD, REYNOLDS ARPT: Clsd until May 1965.
SPIRIT LAKE ARPT: Clsd winter months.
VICTOR MUN ARPT (BENNETT FLD): Clsd UFN.

ILLINOIS

CHICAGO, HINSDALE ARPT: Clsd to all transient acft except in emgcy UFN.
CHICAGO, MIDWAY ARPT TWR: Radar advisory to all acft operg VFR. This service is designed to aid pilots to see and avoid other tfc by providing radar tfc info. All VFR acft operg within a 30 mi radius of MDW at 10,000′ MSL or below can obtain this service by ctcg MDW radar on 119.2 mc. On initial ctc acft are required to advise MDW radar of their aprx position and alt, heading being flown and their destination. All tfc will be current altimeter at MDW. Acft lndg at MDW will be issued wind and rnwy info. Tfc transiting the area will be provided this service til 3 mi from perimeter of radar scope at which time this service will be terminated. Radar service described herein is not to be interpreted as relieving the pilots of their responsibility for continual vigilance to see and avoid other acft. It is provided to aid him in his visual surveillance by calling to the pilots attention pertinent tfc. Pilots are reminded that the surveillance radar utilized by controllers does not provide alt info. Pilot participation is not mandatory but is recommended.
CHICAGO-O'HARE INTL ARPT: Motel sign 1¾ mi from apch end of rnwy 32L maybe mistaken for apch lgts. Caution advised.
PEORIA, GREATER PEORIA ARPT: 5′ unlgtd fence at apch end rnwy 22. Arriving acft with proper freq should make initial ctc with apch ctl on 125.8 mc regardless of wea.
POLO, HAMILTON FLD: Closed until further notice due ice and snow.

NEW YORK, BROOKLYN SEAPLANE BASE: Clsd until aprxly May 1965.

NEW YORK JOHN F. KENNEDY INTL TOWER: August 1, 1964, Kennedy Tower began an evaluation of a new "pre-taxi clearance" concept, which is intended to provide departure aircraft with better serv-

ice by permitting more expeditious handling reducing frequency congestion and providing a better atmosphere for receipt of the IFR clearance. Additionally, participating flights will normally remain on a single control frequency from the time the aircraft commences taxiing until ready for departure.

The following procedures will be evaluated:

1. Initial call-up to the tower will be on Clearance Delivery, frequency, 121.65 mcs. This call shall be made a maximum of ten (10) minutes prior to estimated taxi time. IFR clearance and departure runway currently in use shall be issued at this time. Time and altimeter setting will be isued to all itinerant departures and to schedu'ed air carriers when requested.

2. Additional information shall also be issued at the time of clearance delivery. This information shall consist of only that which will concern the departure aircraft. An example of this would be an advisory that departure de'ays are twenty (20) minutes and that turbojet aircraft should contact Ground Control prior to starting engine:.

3. After clearance is received, aircraft shall return to normal frequency use, i.e., contacting Ground Control on 121.9 mcs., when ready to taxi. Pilots need not inform Ground Control of receipt of c earance. As heretofore, aircraft will become part of the departure sequence only after informing Ground Control they are ready to taxi.

4. If an IFR clearance is not available prior to the time a flight is ready to taxi, the pilot will be changed to Ground Control and issued taxi clearance and later changed to Clearance Delivery for an IFR clearance.

5. If aircraft make initial call-up on Ground Control frequency, they will be given clearance to taxi as heretofore, and later changed to Clearance Delivery for their IFR clearance. No aircraft shall receive additional de'ay because of non-participating in this program.

6. In the event a flight is delayed by its company or other unanticipated circumstances after the IFR clearance has been issued, the pilot shall inform the Clearance Delivery Controller of the delay ,and shortly prior to taxiing out, re-affirm that the clearance and information is still valid.

NEW YORK LA GUARDIA ARPT: Until Apr 25, 1965, arpt will be clsd to all acft operns from 2330 to 0700 EST Monday thru Saturday due to constrn.

NORTH TONAWANDA, COUNTY LINE ARPT Clsd to transient acft until May 15, 1965.

ORCHARD PARK: Clsd until spring.

ROMULUS, SENECA ARMY DEPOT: Controlled firing for demolition purposes when wea permits during regular working hrs Mon-Fri within flwg area: A circular area with a 1350′ radius centered at lat 42°46′59″N and long 76°53′06″W. Demolition activities in the area will go no higher than 2000′ MSL and only when ceiling of 5000′ or better and visibility 5 mi or more. Notams regarding activities conducted will be filed with Elmira FSS.

STORMVILLE ARPT: Clsd UFN due to mud and slush.

TICONDEROGA ARPT: Clsd for duration winter season.

WARWICK MUN ARPT: Clsd until aprxly Jun 15 due to constrn. Locally based acft will be using limited portions of afld durg constrn.

WATERTOWN MUN ARPT: Rnwy 1–19 clsd to all operns UFN. Will not be maintained during winter months.

NORTH CAROLINA

CHARLOTTE, DOUGLAS MUN ARPT: Rnwy 18- clsd until aprxly May 1 due constrn.

ELIZABETH CITY MUN ARPT: Due to heavy VFI GCA tfc lndg rnwy 10 at the U.S. Coast Guard Stat- it is recommended that all tfc lndg at the Eliza- City Mun arpt contact Elizabeth City Coast Guard -a on 126.2 mc for tfc information. Acft without r.i enter 500′ pattern from the west.

FAYETTEVILLE, POPE AFB: Extensive operns 2,000′ MSL 1200–2200Z Mon thru Fri. Pilots of acft are advised that in an area from Lillington, N north along arwy V3E 6 NM to Chalybeate, N counterclockwise west 12 NM to Broadway, N.C., the SW 38 NM to Marston, N.C., thence E 26 NM to R fish, N.C., thence NE 27 NM back to Lillington: tensive training will be conducted W of V3E u heavy four engine transport and prop jet (C–12 C–130) acft, consisting of single, formation, and m ple formation flights. These acft oper 2,000′ and b under VFR conditions, conducting low level (30 to 2,000′ MSL) runs in the maneuvering area de above, for troop and cargo drops into R-5311. Sim operations are conducted in the vicinity of Ma AAF with drops at Mackall AAF.

NORTH DAKOTA

LANGDON MUN ARPT: Rnwy lgts inop UFN. U for skl acft only.

MOHALL ARPT: Lgtg facils inop until spring.

PEMBINA MUN ARPT: E/W rnwy clsd and con rnwy 14–32 until aprxly Jul 15, 1965.

OHIO

CINCINNATI: Moored mrkd balloon will be flow or ngt up to an alt 1500′ MSL. Site of operns 7½ NE Greater Cincinnati Arpt and 6½ mi W L Arpt. Balloon will be tethered aprxly ½ mi W Cincinnati Union Trml Bldg.

LAKE MILTON, KOASIS RESORT ARPT: Clsd u further notice.

RAVENNA ARSENAL (APCO): Ctld firing for de lition purposes, when wea permits, during re working hrs, Mon-Fri within the following a bounded on S by lat 41°11′30″, on N by lat 41°12 E long 81°04′22″; W long 81°06′14″. Demolition a ities in this area will go no higher than 500 and only when ceiling of 10,000′ or better and v mi or more. Notams regarding activities co will be filed with FSS Akron Mun Arpt (te STadium 4–1246).

TOLEDO MUN ARPT: Clsd Suns to all itinera btn 1400–2300 due to drag races all rnwys UFN.

OKLAHOMA

✓BARTLESVILLE RDO: H facility, ident: BV comsnd.

ENID: Mon-Fri during dalgt hrs, in addition to student jet operations being conducted with areas designated on charts, intsv VFR student is conducted from gnd to 10,000′ MSL within 5 radius of Vance AFB and Kegelman Auxiliary nmi NW of Vance AFB). These areas sho avoided. Recommended acft arriving and de Woodring Arpt in VFR condition utilize the fo routes. From the west, cross directly over the

Lahoma at 3500' MSL and maintain 3500' MSL via hiway until within a three nmi radius of Woodring Arpt before starting descent. Departing Woodring Arpt W bound, climb to 3500' MSL within 3 nmi radius of Woodring Arpt then proceed W bound over hiway until reaching the town of Lahoma maintaining 3500' MSL. To and from the S maintain 2300' MSL E of an extended N S line to a point abeam the town of Bison. To and from the N and E maintain 4000' MSL or below within 20 mi of Woodring Arpt. Low level jet navigation missions now being performed at 1000' to 1500' AGL at 300 knots along the following routes: Vance AFB; 8 nmi N of Fairview; Ft Supply; Darrouzett; Briscoe; Strong City; Bridgeport; Enid. Vance; 8 nmi N of Fairview; Knowles; Bucklin, Kans; Hazelton, Kans; South Haven, Kans; Enid. Vance; Clinton, Vichy, Medicine Lodge, Kans; Rago, Kans; Enid. Contact Vance Apch Control for tfc advisory 1200-2400 Mon-Frl on 121.3 or rcv on 122.5 mc.

MOORE, TWELFTH ST ARPK: 280' (1613' MSL) lgtd rdo antenna twr constrd 1 nmi E (090 T) at Lat 35°21'42" Long 97°27'51".

OKLAHOMA CITY, WILL ROGERS WORLD ARPT: New N/S rnwy under constrn 1 mi E of existing N S rnwy. Clsd to all operns.

STILLWATER RDO. About May 15, VOR will be comsnd. Ident: "SWO". Freq: 108.4 mc. Class: T-BVOR. Lctd at lat 36°13'15", long 97°01'42". Variation 9° E. Monitoring category 1. Controlled by Oklahoma City FSS.

STILLWATER, SEARCY FLD: Intermittent constrn in progress all rnwys until aprxly Aug 31, 1965.

TIPON MUN ARPT: N/S rnwy clsd until July 1, 1965 reconstrn turf rnwy.

YUKON, CIMARRON FLD: Use turf rnwy 17-35 only.

OREGON

The following arpts are clsd for an unknown duration, due to winter: **Beaver Marsh**; Stearns; Crescent Lake Flight Strip; Idanaha, Stayton; Lake of the Woods; Lapine; Pinehurst.

SPECIAL NOTICE: **Periodic AA firing (Warrenton Artillery Range), during dalgt hrs from surface to alt of 20,000' in area bounded by 46°12'N, 124°10' W thence 46°12'N, 123°59'20"W thence along a line one half mi E of shoreline to 46°02'N, 123°55'30"W thence 46°02'N, 124°10'W thence to point of beginning. Contact Portland or Hoquiam Rdo for actual firing dates.**

BURNS MUN ARPT: Rnwy lgts inop until further notice.

BROOKINGS, CRISSEY STATE LINE AIRSTRIP: Arpt clsd for unknown duration due damaged rnwy.

CAVE JUNCTION, SPORTSMENS RANCH ARPT: Clsd until further notice.

NORTH BEND ARPT: About 17 nmi N a moored aluminum colored balloon 92' long, approximately 40' diameter being used in logging operns during dalgt hrs, maximum alt 1000' MSL. During hrs darkness will be lowered to 100' AGL.

REDMOND RDO: LFR and Z mrkr decomsnd. Mar 4. RBn comsnd at LFR site class: H-SAB. Ident: RDM, freq 368 kc controlled by Redmond FSS.

UMPQUA RIVER, SCOTTSBURG TO REEDSPORT: River canyon crossed by 4 electric power lines. Twrs on both banks mrkd by red lgts. Easternmost crossing also mrkd with 20" orange aluminum balls spot lgtd from both sides of the river.

PENNSYLVANIA

The following awry lgt bcns will be decmsnd on or about April 29, 1965: Bald Eagle Mountain, Site Number 52 (C NY); Columbia Crossroads, Site Number 18 (CB-BC); Hecla Cap, Site Number 53 (C-NY); Laurelton, Site Number 55 (C NY); Ring Mountain, Site Number 60 (C NY); Shunk, Site Number 16 (CB-BC).

COUDERSPORT, POTATO CITY ARPT: Clsd winter months.

CULMERVILLE ARPT: Clsd to all transient acft until aprxly Jan. 1966 due to banner towing.

GETTYSBURG, ADAMS COUNTY ARPT: Arpt will be clsd intermittently until Apr 1 due to soft fld conditions.

GREENVILLE MUN ARPT: Clsd to wheeled acft

HANOVER, DEVENE RARPT: Arpt will be clsd until April 1, 1965 due to soft conditions and snow.

HAZELTON MUN ARPT: Until about Apr 30, rnwy 6-24 clsd due soft fld.

NEW ALEXANDRIA ARPT: Clsd until aprxly May 1, 1965.

PHILADELPHIA INTL ARPT: Excavation 1 to 3 ft deep, 100' long and 150' wide aprxly 30' from apch end rnwy 27. Ant structure aprxly 5' ht, 45' long, 217' from apch end rnwy 27 UFN.

PUNXSUTAWNEY MUN ARPT: Arpt clsd until further notice due to constrn.

WILKES-BARRE, WILKES-BARRE SCRANTON AIRPORT: During the period of the Wilkes-Barre VOR shutdown, the following missed apchs will be in effect: Proc. ILS-4, Amdt. 16, effec. 18 Apr. 1964. If visual ctc not established upon descent to authorized lndg minimums or if lndg not accomplished within 3.9 mi after passing Wilkes-Barre LOM or 8.5 mi after passing Crystal Lake RBn, climb to 3500' on crs 043° from the Wilkes-Barre LOM, turn left and proceed direct to Crystal Lake RBn, maintain 3500', hold SW one-minute left turns, inbnd crs 043°. ADF Proc. No. 1, Amdt. 5, effec. 18 Apr. 1964 If visual ctc not established upon descent to authorized lndg minimums or if lndg not accomplished within 3.9 miles after passing Wilkes-Barre LOM, climb to 3500' on crs 043° from the Wilkes-Barre LOM, turn left and proceed direct to Wilkes-Barre LOM, maintain 3500', hold SW, one-minute left turns, inbnd crs 043°. Radar Proc. No. 1, Amdt. 1, effec. 25 Aug. 1962: If visual ctc not established upon descent to authorized lndg minimums or if lndg not accomplished, make an immediate rgt climbing turn (Rnwy. 22) or left climbing turn (Rnwy. 10) so as to intercept a crs of 043° from the LOM, climb to 3500' on crs 043°, then make left turn, proceed direct to Wilkes-Barre LOM, maintain 3500', hold SW, one-minute left turns, inbnd crs 043°.

YORK ARPT: Beginning April 3, continuing through September 1965 drag racing conducted each Saturday 1500-2400 EST. Itinerant acft required Unicom (122.8 kc) rdo ctc for advice clear rnwy. Arpt clsd sundown until termination of races. Same conditions apply drag races all day and ngt July 17 and dalgt hrs July 18. Air Show all dalgt hrs June 20, 1965.

SOUTH CAROLINA

CHERAW MUN ARPT: Closed.

COLUMBIA ARPT: First 1000' rnwy 10 clsd during dalgt hrs due constrn

COLUMBIA, OWENS FLD: Clsd to all ngt transient operation.

LAKE CITY, BROWN ARPT: Rnwy 1–19 clsd until aprxly Apr 1 for resurfacing and extension on N end.

SOUTH DAKOTA

ESTELLINE ARPT: Clsd during winter months.

MOBRIDGE RDO: State owned and operd VOR operg 0700–1900, VFR use only. Class: L–VOR. Freq: 108.6, receivers 122.1. Ident: MBG. Lctd lat 45°33'07", long 100°21'56".

TENNESSEE

MURFREESBORO MUN ARPT: Glider towing and soaring activity conducted dalgt hrs at and in vcnty arpt.

NASHVILLE, CUMBERLAND FLD: Hvy equipment crossing S end rnwy dalgt hrs Mon-Sat noon.

TEXAS

AMARILLO: Controlled Firing Area lctd 10 mi NE of end of NE/SW rnwy of Amarillo AFB/Mun: Lat 35°-21'09", long 101°37'04" E to 35°21'12", 101°32'26", S to 35°17'56", 101°32'26" W to 35°17'56", 101°37'04", N to point of beginning. Time of Use: 24 hrs per day. Altitudes: up to 3552'.

BIG SPRING: Due intsv jet tfc at Webb operg Mon-Fri during dalgt hrs it is suggested all acft operg VFR remain at or above 9000' MSL when traversing area encompassed by 15 nmi arc of BGS VOR, excluding any overlap of V–66, including area W along V–16S to point 20 nmi SW of BGS VOR, and an extsn E to include area bounded N by S bndry of Trng Area Webb AFB/Reese Three, bounded S by N bndry of V–66, to N–S line drawn through town of Loraine, Tex. Concentrated jet trng within 10 nmi radius of Colorado City Aux Arpt lctd aprxly 38 nmi E Big Spring. VFR student jet tfc crossing airways within radius of 60 nmi BGS VOR utilizing appropriate VFR hemispherical crossing for tfc advisories.

BIG SPRING HAMILTON FLD: Caution, all alt 3,600' MSL and above intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600' MSL.

BIG SPRING HOWARD COUNTY ARPT. Caution, all alt 4,100' MSL and above, intensive jet tfc. T–37 tfc pattern alt at Webb AFB 3,600' MSL.

✓BROWNSVILLE, RIO GRANDE VALLEY INT'L ARPT: 200' (211.5' MSL) lgtd rdo twr constrd 4 nmi NE (034°T) at Lat 25°57'00" Long 97°23'00".

BROWNSVILLE, RIO GRANDE VALLEY INTL ARPT: Rnwy 13R–31L clsd except that lgt acft may be cleared to land on rnwy 13R.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200' MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13–31 clsd ufn.

DALLAS-HIGHLAND PARK ARPT: 110' of N end rnwy 17 will be removed due highway constrn. Usable portion will be marked by threshold line.

DALLAS, LOVE FLD: Two bldgs being erected 5 nmi SSE (144°T) at lat 32°47'00", long 96°47'50". Bldg A max tmpry hgt 661' (1115' MSL). Completed bldg will be 595.5'. (1039' MSL). Bldg B will reach max tmpry hgt 710' (1149' MSL). Completed bldg will be 609.5' (1049' MSL).

EDINBURGH MUN ARPT: Rnwys rough. Use Caution.

HONDO: Randolph AFB jet T-38 and T–33 acft will conduct acrobatic and transition flights within 15 nmi radius of Hondo. Intensive touch and go landing on Hondo rnwy 17 and 35. Operations will be conducted under VFR conditions during dalgt hrs Mon-Fri. Trng acft practicing touch and go lndgs cntld by RSU freq 295.0 call sign Cootie arriving and dptg acft equipped with this freq call Cootie RSU for info and request tfc patn be cleared. Other acft apch fld from the E and fly N to S or S to N over bldgs next to ramp at 600' above surface to signify intent to land. Do not enter tfc unless jets have cleared patn to orbit altitude. Jets will orbit at 3000' MSL when acft are arriving and departing. Jet arresting barriers installed on rnwy 17 and 35. Use caution when landing over up barrier. Barriers will be lowered when trng is not in progress. Non-scheduled dropping of personnel and equipment conducted from alt of 700' to 1000' above the surface on W side arpt Tues, Wed and Fri 1900–2300C and on Sat and Sun 1500–2100C.

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft opers for unknown duration.

HOUSTON INTL ARPT: Inbnd flts ctc Houston apch ctl aprxly 25 mi out for lndg instructions. Acft flying to the arpt on hdg 189° thru 037° ctc Houston apch ctl on 119.1 or 379.1 mc. Acft flying to the arpt on heading 038–188° ctc HOU apch ctl on 118.1 or 307.1.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

KILLEEN, HOOD AAF: A VFR Practice Instrument Apch Procedure has been published in a loose leaf format for use by USAF Training Command Pilots. Civil requests for this chart should be submitted to the Director, Coast and Geodetic Survey, Attn: Distribution Division, 14th and Constitution Avenue, Washington, D.C. 20230.

KILLEEN (FORT HOOD), ROBERT GRAY AAF. VOR Procedure No. 1. Original, efctv 15 Feb 1964 and ADF Procedure No. 1, Original, efctv 28 March 1964 are now in effect. Pending designation of controlled airspace, associated instrument approach procedures not entirely within controlled airspace. This NOTAM cancelled automatically on effective date of designation of controlled airspace for Robert Gray AAF.

KILLEEN MUN ARPT: Clsd for rebuilding until aprx May 15, 1965. Tmpry 1600' sod strip avbl for use during dalgt hrs when dry.

LAREDO: Instv VFR jet trng conducted in Laredo ctl zone and in area 5 mi either side of 068° rad Laredo VOR extending 20 mi eastward of stn. It is urged that all VFR operns (civil and mil) be conducted at or above 9000' MSL in this area. It this is not feasible, ctc Laredo AFB apch ctl on 126.2 mc or 122.5 mc; rcv on 126.2 or 118.5 mc for tfc advisory service. Acft operg VFR and off awys within a 50-nmi radius of Laredo. Use extreme caution due extsv jet trng.

✓LONE STAR STEEL COMPANY ARPT: Closed to public.

LUBBOCK MUN ARPT: N 400' rnwy 17L–35R clsd during constrn new E/W rnwy Usable lndg length both directions 3000'. Rnwy 12–30 clsd indefinitely.

MIDLAND AIR TRML: Webb AFB T-38 acft will be making practice ILS apchs to transition from Webb I Intensive student jet trng area to the Midland ILS, acft will report Webb 1 Intensive Student Jet Trng area northbound at 12,000' MSL descending to intercept W course of the Midland ILS lclzr. All transition and practice ILS apchs shall be during dalgt hrs in VFR conditions and only when Webb 1 Intensive Student Jet trng Area is in use.

✓RIO HONDO, NORMAN RANCH ARPT: Closed to public.

SAN ANTONIO, CAMP BULLIS: Controlled Firing Area as follows: A circular area 1¼ smi in radius centered at lat 29°42'00", long 98°33'50". Altitude: surface to 3000' MSL (1500' AGL). Time and use: 0830 to 1200 hrs lcl time, Fri of each wk for destruction of ammunition by detonation.

SAN ANTONIO, RANDOLPH AFB: Due to jet and conventional acft making GCA apchs suggest all acft operg VFR that will traverse area N of Randolph remain at least 10 nmi from the base and above 3000' MSL. Hvy conventional and jet instrument aerobatic and transition trng in SE quadrant btn V198 and V163 and V163W @ 10 nmi radius of Randolph Mon-Fri. VFR jet tfc will be crossing V163 and V163W S of the City of San Antonio at the appropriate hemispherical crossing altitudes en route to Hondo Mun Arpt. Hvy IFR VFR penetrations and apchs will be made from the La Vernia VOR to Randolph AFB. Should necessity dictate flight in the close proximity of Randolph AFB, aircraft should contact Randolph Tower on 126.2mcs for traffic advisories.

✓SAN MARCOS MUN ARPT: 324' (1011' MSL) lgtd rdo twr constd 4 nmi N (007 T) at Lat 29°53'32" Long 97°56'22". (existing height increase).

✓SPRING, SKYLINE ARPT: 210.5' (306.5' MSL) lgtd rdo twr constd 2.5 nmi S (180 T) at Lat 30°02'54" Long 95°25'54".

EMPLE, DRAUGHON-MILLER ARPT: Runway 11 29 clsd until further notice.

TYLER, POUNDS FLD: ILS-13, Amdt. 5, ILS 31, Amdt. 5 and ADF 1, Amdt. 5 are revised as follows effective immediately: Delete straight-in minimums.

UTAH

✓BRYCE CANYON ARPT: Rnwy 12-30 clsd UFN acct snow.

✓BRYCE CANYON, KANAB MUN ARPT: Rnwy lgts inoperative. Rotating beacon changed to white.

✓DELTA MUN ARPT: Clsd to all ngt operns 1800-0800 MST UFN.

✓DUCHESNE MUNARPT: No snow removal eqpmt or svc during winter months.

✓FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

✓SALT LAKE CITY RDO: H facility ident SLC decomsnd.

✓SALT LAKE CITY RDO: Test in progress using the ARTCC area discrete frequency to extend VFR air ground coverage. VFR flights in the Salmon-Challis area when unable to contact a nearby FSS through normal channels may call Salmon Radio on 125.3 mc for flight assistance service. Salt Lake City FSS will reply on 125.3 mc from the air/ground site at 45°10'N, 114°02'W, elevation 9104' MSL. Further information is contained in a letter to Airmen being distributed in the area.

VERMONT

BARRE MONTPELIER ARPT: Rnwy 5-23 clsd until aprxly Apr 15, 1965.

BRISTOL, MUN ARPT: Open winters. N-S rnwy will be plowed.

NEWPORT MUN ARPT: Rnwy 5-23 clsd until about May 1, 1965 due snow.

RUTLAND MUN ARPT: Rnwy 13-31 clsd winters. Rnwy 1-19 has low spots and catch basins 10' in from sides until aprxly Apr 15, 1965.

VIRGINIA

DAHLGREN: Restricted Area R-6611, 6612, 6613 routine daily air and surface firing presents extreme hazard to acft all alts, SR-SS, Mon-Fri.

FT. BELVOIR, DAVISON AAF: Experiments being conducted in an area within a 1 mile radius of center point long. 77°08'16", lat 38°44'26". Rotary wing acft should avoid this area and fixed wing acft stay above 2000'. Extreme caution advised to all acft flying in area UFN.

FRONT ROYAL, STOKES FLD: Unattended until further notice.

MARTINSVILLE ARPT: Quarry, 7 mi NNW of arpt intermittent hvy blasting, dalgt hrs, hazardous to low flying acft.

RICHMOND, RICHARD E. BYRD FYLING FLD: Until about May 1, constr rnwy 15-33. Twr approval for use of rnwy 15-33 required at all times.

WASHINGTON

The following is a list of flds that are clsd November-May due to winter elements: Bandera Arpt; Easton Arpt; Emmaclaw, Ranger Creek Arpt; Laurier, Avery Arpt; Leavenworth, Lake Wenatchee Arpt; Lester Arpt; Oroville, Nighthawk Arpt; Packwood Arpt; Skykomish Arpt; Stehekin Airfld.

The following is a list of airports that are clsd until further notice (aprxly April or May): Davenport, La-Crosse Mun, Lind, Northport-Lowry Mun and Metaline Falls-Sullivan Lake USFS.

EVERETT, PAINE FLD: Twr unable to observe portion of rnwy 34 starting 1000' from approach end and extending for aprxly 2000' due to construction on fld UFN.

✓OLYMPIA MUN ARPT: Rnwy 13-31 permly clsd.

RENTON MUN ARPT TWR: Lgt gun signals not visible 195-300° at 1000' MSL beyond 2 mi.

SEATTLE: Hi alt jet route J96-505 from SEA VOR to Canadian boundary not usable due to lack of Nav guidance.

VANCOUVER, EVERGREEN FLD: Until aprxly May 4, constrn in progress dalgt hrs—rnwy surfacing on rgt side turf rnwy for first 1000' E of apch end rnwy and will be mrkd when work in progress.

✓WILBUR, KUNZ AIRSTRIP: Abandoned

WEST VIRGINIA

CLARKSBURG, BENEDUM ARPT: New rnwy 13-31 under constrn, unlgtd.

ELKINS, RANDOLPH COUNTY ARPT: Rnwy lgts (rnwy 13-31) inop indefinitely.

WISCONSIN

CHETEK MUN ARPT: All lndg area lgtg inop until aprxly Apr 15. Arpt open to ski equipped acft only.

CORNELL ARPT: Open to ski equipped acft only.

LAND O LAKES, KINGS LAND O LAKES MUN ARPT: Clsd winter months. Rnwy lgts on req (Phone 547-3777.)

MADISON, TRAUX FLD: Hi intensity rnwy lgts on rnwy 18-36 permly inop on Step 5.

MANITOWISH WATERS ARPT: Clsd winters. No fuel until spring.

MANITOWOC MUN ARPT: Rnwy 17-35 being extended to 5000'. Constrn in progress N end rnwy. Men and equipment in N apch area. Completion date expected about mid summer.

SHEBOYGAN COUNTY MEML ARPT: Rbn freq 254 kc Ident: SEM, no voice, operd by County: lctd on arpt

WEST SALEM, MAPLE GROVE ARPT: Clsd until April 15, 1965.

WYOMING

KREMMERER MUN ARPT: Clsd UFN due winter ski conditions.

LANDER, HUNT FLD: Bcn inop indefinitely.

ROCK SPRINGS MUN ARPT: Clsd to all ngt opns and during IFR wea pending reletn threshold lgts rnwy 7-25.

CHANGES/ADDITIONS TO AIM

PAGE 1–4

10. The list of airborne check points and ground check points is published in Section III. VOT's are included with the airport information in Section IV A.

December 1964

PAGE 1–5:

VOR Operational Limitations change to read:

OPERATIONAL LIMITATIONS VOR/VORTAC/TACAN

. The terms VOR, VORTAC, and TACAN are, operationally, general terms covering the VHF and UHF omnidirectional bearing type of facilities without regard to the fact that the power, the frequency protected area, the equipment configuration, and operational requirements may vary between the facilities at different locations.

. The table below lists the intended operational service volume or volumes of the various categories of VOR's, VORTAC'S, and TACAN's. Below 18,000 feet msl, the operational service volume of the H class facility has been limited to the L class service volume due to signal coverage characteristics of VHF and UHF facilities at the lower altitudes. T class facilities provide terminal service at locations where it is not practicable to provide L class frequency protection. Normal signal coverage and interference free service may be expected within the operational service volume unless specific facility restrictions have been imposed. Except along established airways or routes, use of these facilities for IFR operations outside of the operational service volume without additional flight inspection is not intended and may result in undependable or inadequate indications in the cockpit.

Class of VOR, ORTAC, or TACAN	Operational Service Volume
(Terminal)	25 nmi up to 12,000′ msl
(Low altitude)	40 nmi up to 18,000′ msl
(High altitude)	40 nmi up to 18,000′ msl 130 nmi from 18,000′ msl 45,000′ msl 100 nmi above 45,000′ msl

December 1964

GE 1–5:

Delete paragraphs 5 and 6 under Distance Measuring luipment (DME) and substitute the following:

Due to the limited number of available frequencies, assignment of frequency pairs has been required for certain military noncollocated VOR and TACAN facilities which serve the same area but which may be separated from a few to many miles. Additional frequency assignments have been made for remotely located military TACAN facilities which may be within reception range of a randomly paired ILS localizer. Selection of a DME channel while tuned to a randomly paired VOR or ILS frequency could result in the reception of distance information from a source which is remotely located from the VOR or ILS facility.

6. VOR/DME, VORTAC and ILS/DME facilities are readily identified by synchronized identifications which are transmitted on a time share basis. Identification of noncollocated VOR or ILS and TACAN facilities are not synchronized, resulting in intermixing and apparent distortion during TACAN identification whenever simultaneous aural monitoring of VOR or ILS and TACAN identification is attempted. DME equipment has been installed at only a few ILS locations and any DME presentation while using an ILS frequency which does not have an associated DME would be originating from a randomly paired remote location.

7. Aircraft receiving equipment which provides for automatic DME selection assures reception of azimuth and distance information from a common source whenever designated VOR/DME, VORTAC and ILS/DME navigation facilities are selected. Until further advised, pilots are cautioned to disregard any distance displays from automatically selected DME equipment whenever VOR or ILS facilities, which do not have the DME feature installed, are being used for position determination.

February 1965

PAGE 1–24:

Under TRANSCRIBED WEATHER BROADCASTS add:

3. Automatic transcribed broadcasts service is available on class H facilities designated as:

a. HSAB—A class H radio beacon required for IFR radio navigation and/or airtraffic control and for automatic transcribed weather broadcast service. This class facility will be depicted on radio facility, Sectional and WAC type charts.

b. SABH—A class H radio beacon having limited navigational use in that it is not flight inspected for IFR certification or primarily used for air traffic control. This aid will provide the automatic transcribed weather

broadcast service and will be depicted on Sectional and WAC type charts, only.

4. Operation of either type facility will be essentially the same. Both will have a code identification sent at frequency intervals keyed simultaneously with the voice signals. Although, not essential, it may be advantageous to listeners to equip their receivers with a 1020 cycle code rejection filter which, when switched to the "voice" position, will silence the keyed code identification signal.

5. The AB (automatic transcribed service) component of HSAB's and SABH's will operate continuously except during those periods when the transcription equipment is inoperative. During these periods manual broadcasts, scheduled (H+45 hourly) and non-scheduled will be made.

February 1965

PAGE I–36:

Under Vertigo, delete last sentence, "If the beacon etc".

December 1964

PAGE IV–42—Change as follows:

Second column, second entry under state of Idaho—move MACKAY 1 SE to page IV 45 second column 8th entry from bottom and substitute MACKAY 1 SE for AMERICAN FALLS, AMERICAN FALLS 2 NE. The latter moves to page IV 42 second column, second item under state of IDAHO.

Federal Aviation Agency

Airman's INFORMATION MANUAL

SECTION IV

AIRPORT DIRECTORY

DECEMBER 1964

53-036 O - 64 - IV 1

INTRODUCTION

Sections IV and IV–A—AIRPORT DIRECTORY

In Sections IV and IVA there are provided an Airport Directory, an Airport/Facility Directory, a tabulation of ARTCC communications frequencies, and a tabulation of Flight Service Stations.

Section IV contains the Airport Directory which is a listing of all known airports, heliports, and seaplane bases available for transient civil use within the conterminous United States and indicates those airport services and facilities available at each. Heliports and seaplane bases serve a select group of users and are, therefore, tabulated separately following the airport tabulation. Military airports and privately owned and operated airports closed to civil aviation are not listed.

Section IV–A contains an Airport/Facility Directory providing an integrated tabulation of major airports, heliports, and seaplane bases which have terminal navaids and communications facilities available at the field. This tabulation combines all facilities and services available at each airport (heliport or seaplane base) or terminal area into a single listing, thereby eliminating the need to consult multiple tabulations to obtain and assemble the various types of information pertinent to a given terminal area.

In both Sections IV and IV–A, airports are listed alphabetically by geographical location (city or town) within each state. Where city and airports names are identical, the airport name is omitted. Airport names are sequenced alphabetically at locations having two or more airports. Airport name different from the city or location name are cross-referenced within Section IV. All major airports in Section IV–A are listed by name in Section IV, with a cross reference to its tabular listing in Section IV–A. Airports with a published instrument approach procedure are identified as an IFR airport by the letters "IFR" positioned immediately following the name.

Thus in Section IV, all airports within a given geographical location (city) area are listed under the city name. For example, under Cleveland would be listed Burke Lakefront, Cleveland-Hopkins, and Cuyahoga Co. airports. These airports would also be listed alphabetically by name with a cross reference to the city-name tabulation (Cleveland in this case), making it possible to locate any airport whether or not the related city name is known.

The format of the Airport/Facility Directory in Section IV–A provides a grouping of airport data and services, and terminal navaid and communications facilities, each followed by pertinent remarks. Terminal navaid and communications facilities are tabulated in Section IV–A only.

Airports listed in Section IV having terminal navaid communications services available that are provided remotely from another (different name) facility, are cross-referenced to the different name airport in Section IV–A. The voice call and frequencies of the navaid and communications services provided civil airports by a military facility are listed under the airport receiving the service in both Sections IV and IV–A.

Radar and non-radar communications services (approach, departure and advisory) are tabulated separately. Those services utilizing radar are listed under the head of "RADAR SERVICES". The letters "BCN" are shown following "RADAR SERVICES", when a transponder beacon is operated by the airport. All communications services provided by a military facility are radar monitored.

Civil Use of Military Fields

U.S. Air Force, Navy, and Coast Guard Fields are open to civil fliers only in emergency or with prior permission; Army Air Fields are open to civil aircraft on authorization of the Air Field Commander.

For Air Force installations, prior permission should be requested at least 30 days prior to the first intended landing from Headquarters USAF (AFOAPDA) via the Commanding Officer of the field concerned (who has authority to approve landing rights for certain categories of civil aircraft). For use of more than one Air Force installation, requests should be forwarded direct to Hq USAF (AFOAPDA), Washington, D.C 20330.

For Naval installations, prior premission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Officer of the field concerned (who has the authority to approve landing rights for certain categories of civil aircraft).

For Coast Guard fields, prior permission should be requested from the Commandant, U.S. Coast Guard via the Commanding Officer of the field.

With minor exceptions, authority to use Air Force and Navy fields is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity. Use of Coast Guard fields is limited to persons on government business only when there is no suitable civil airport in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

Heavy Traffic Around Military Fields

Pilots are advised to exercise vigilance when in close proximity to most military airports. These airfields have an unusually heavy concentration of jet aircraft operating with 5-to-25 nautical mile radius and from surface to all altitudes. This precautionary note also applies to the larger civil airports. BE ALERT, STAY ALIVE.

TABLE OF CONTENTS

Section IV

AIRPORT DIRECTORY

Page

AIRPORT DIRECTORY IV–1

SEAPLANE BASE DIRECTORY IV-225

HELIPORT DIRECTORY IV-231

AIRPORT/FACILITY DIRECTORY LEGEND

LOCATION

The airport location is given in nautical miles (to the arest mile) and direction from center of referenced y. This is followed by the bearing and distance from principal NAVAID within 25 nautical miles of the port. The distance is not specified if less than half le from the field.

ELEVATION

Elevation is given in feet above mean sea level and based on highest usable portion of the landing area. en elevation is sea level, elevation will be indicated "00." When elevation is below sea level, a minus n (−) will precede the figure.

RUNWAYS

The runway surface, length, reciprocal headings, and ght bearing capacity are listed for the longest instrut runway or sealane, or the longest active landing tion of the runway or strip, given to the nearest dred feet, using 70 feet as the division point, i.e., 8 feet would be shown as "14"; 1474 feet would be wn as "15." Runway lengths prefixed by the letter ' indicates that runways are hard surfaced (conte: asphalt; bitumen, or macadam with a seal coat). the runway length is not prefixed, the surface is sod, r, etc. The total number of runways available is wn in parenthesis.

RUNWAY WEIGHT BEARING CAPACITY

dd 000 to figure following S, T, TT and MAX for s weight capacity, e.g., (S–000).

-Runway weight bearing capacity for aircraft with single-wheel type landing gear. (DC–3), etc.

-Runway weight bearing capacity for aircraft with twin-wheel type landing gear. (DC–6), etc.

T-Runway weight bearing capacity for aircraft with twin-tandem type landing gear. (707), etc.

uadricycle and twin-tandem are considered virtually al for runway weight bearing considerations, as are gle-tandem and twin-wheel.

blank space following the letter designation is used ndicate the runway weight bearing capacity to sus- aircraft with the same type landing gear, although nite figures are not available, e.g., (T–).

AX-Maximum runway gross weight bearing capacity for all aircraft.

mission of weight bearing capacity indicates inform- n unknown. Footnote remarks are used to indicate nway with a weight bearing greater than the longest way.

SEAPLANE BASE FACILITIES

A number preceding the parenthetical designation, indicates the number (quantity) available.

Beaching gear, consisting of the quantity and type of beaching gear available.

The number (quantity) if available, of Mooring Buoys (MB) and Crash Boats (CB) available. MB & CB indicates details of quantity are not available.

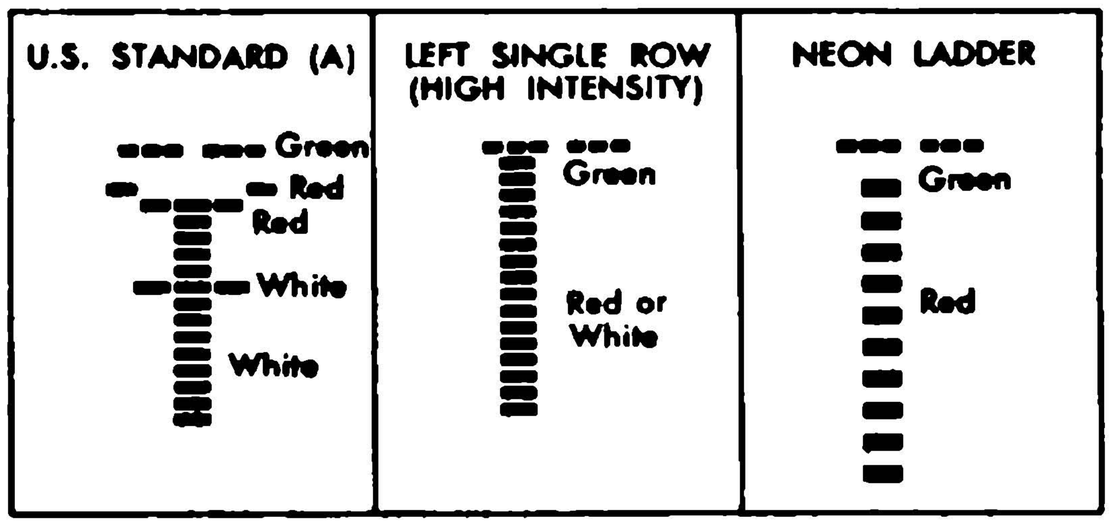
LIGHTING

B: Rotating Light (Rotating beacon). (Green and white, split-beam and other types.) Omission of **B** indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE. - Code lights are not codified, and are carried in Remarks.

L: Field Lighting (when code **L4–7** is indicated, lighting **4, 5, 6, 7** is available). An asterisk (*) preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise or by request (circling the field or radio call). **L** by itself indicates temporary lighting, such as flares, smudge pots, lanterns.

1—Strip lights or portable runway lights (electrical)
2—Boundary
3—Runway Floods
4—Low Intensity Runway
5—Medium Intensity Runway
6—High Intensity Runway
7—Instrument Approach (neon)
8A, B, or C—High Intensity Instrument Approach



9—Sequence Flashing Lights (3,000' out unless otherwise stated)
10—Visual Approach Slope Indicator (VASI)
11—Runway end identification lights (threshold strobe) (REIL)
12—Short approach light systems (SALS)

Lighting (Con't)

13—Runway alignment lights (RAIL)
14—Runway centerline
15—Touchdown zone

Because the obstructions on virtually all lighted fields are lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage.
S2: Storage, minor airframe repairs.
S3: Storage, minor airframe and minor powerplant repairs.
S4: Storage, major airframe and minor powerplant repairs.
S5: Storage, major airframe and major powerplant repairs.

FUEL

F1 80 oct., at least.
F2 80/87 oct., or lower.
F3 91/96 oct., or lower.
F4 100/130 performance rating, or lower.
F5 115/145 performance rating, or lower.
F10 Helicopter.

TURBINE FUELS

TP–1 650 turbine fuels for civil jets.
JP–1 (Kerosene), JP–3, JP–4, JP–5.

OTHER

AOE—Airport of Entry.
VASI—Visual Approach Slope Indicator, applicable runway provided.
RVV—Runway visibility, applicable runway provided.
RVR—Runway Visual Range, applicable runway provided.
TPA—Traffic Pattern Altitude—This information is provided only at those airports without a 24–hour operating control tower or without an FSS providing Airport Advisory Service. Directions of turns are indicated only when turns of the pattern(s) are to the right (non-standard). TPA data is related to the runway listed under the tabulated airport information. Generally, only one altitude is listed; however, at some airports two altitudes have been established; one for conventional aircraft and one for high performance aircraft. They are shown in this manner, TPA 8/15–R (increments of 100 feet). The higher figure being the higher performance aircraft altitude.
FSS—The name of the controlling FSS is shown in all instances. When the FSS is located on the named airport, "on fld" is shown following the FSS name. When the FSS can be called through the local telephone exchange, (Foreign Exchange) at the cost of a local call, it is indicated by "(LC)" (local call) with the phone number immediately following the name of the FSS, i.e., "FSS: WICHITA (LC481–5867)." When an Intephone line exists between the field and the FSS, it is indicated by "(DL)" (direct line) immediately following the name of the FSS, i.e., "FSS: OTTO (DL)."

AIRPORT REMARKS

"FEE" indicates landing charges for private or non revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

"Rgt tfc 13–31" indicates right turns should be made on landings and takeoffs on runways 13 and 31.

Limited—intended for private use, but use by public not prohibited.

Remarks data is confined to operational items affecting the status and usability of the airport, traffic patterns and departure procedures.

Obstructions.—Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, such as trees, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.

COMMUNICATIONS

Clearance is required prior to taxiing on a runway, taking off, or landing at a tower controlled airport.

When operating at an airport where the control tower is operated by the U.S. Government, two-way radio communication is required unless otherwise authorized by the tower. (When the tower is operated by someone other than the U.S. Government, two-way radio communication is required if the aircraft has the necessary equipment.)

When operating at an airport which is not tower controlled but at which a Flight Service Station (FSS) is located, two-way radio communication with the FSS is required when the aircraft has the necessary radio equipment. If the aircraft has receiver only, the pilot must maintain a listening watch on the appropriate frequency. These requirements are for the purpose of receiving Airport Advisory Service (AAS) and are in effect only when AAS is indicated on the current Sectional Chart and En Route Chart.

Frequencies transmit and receive unless specified as T—Transmit only, R—Receive only, X—On request. Primary frequencies are listed first in each frequency grouping, i.e., VHF, LF. Emergency frequency 121.5 is available at all TOWER, APPROACH CONTROL and RADAR facilities, unless indicated otherwise by a circle out: 121.5

Radar available is listed under "RADAR SERVICE". Radar beacons are indicated by "(BCN)" after "RADAR SERVICES", when available.

VOICE CALL

The voice call for contact with the traffic control services listed at each airport is the airport name followed by the call of the particular service desired. i.e., "LAGUARDIA TOWER." In these instances, only the name of the service is listed. When the voice call of the facility is not the same as the airport name, the complete voice call is listed.

SERVICES AVAILABLE

(See ATC Operations and Procedures, Section II)

WEB

Clearance Delivery (CLRNC DEL).
Approach Control (APP CON) Radar and Non-Radar.
Departure Control (DEP CON) Radar and Non-Radar.
VFR Advisory Service (VFR ADV) Non-Radar.
Traffic Information Service (TFC INFO) Radar.
Surveillance Radar Approach (ASR).
Precision Radar Approach (PAR).
Ground Control (GND CON).
VHF Direction Finding (VHF/DF).

FLIGHT SERVICE STATION (FSS)

Airport Advisory Service (AAS).
Flight Following Service.
Island, Mountain and Lake Reporting Service.

UNICOM

Private aeronautical station, operates same hours as the airport, transmits and receives on one of the following frequencies:

U–1—122.8 mc (at airports without a control tower).
U–2—123.0 mc (at airports with a control tower).
tower).

ALL—Normal communications between ARTCC controllers and pilots of IFR aircraft, **at all altitudes**, will be conducted via direct controller-to-pilot communication channels using the appropriate ARTCC **SECTOR** discrete frequency. Pilots will be advised of the frequency to be used and when a frequency change is required.

VHF—Communications between ARTCC controllers and pilots of limited radio equipped aircraft that do not have in-flight tuning capability will be conducted on the ARTCC **AREA** discrete (CAD) frequency, or by relay through the flight service station (FSS). The VHF CAD frequency is normally available to and shared by all non-radar equipped sectors.

The use of radar in air traffic control requires the capability of instantaneous interference free controller-to-pilot communications since radar separation minima may be used; therefore, radar equipped sectors used to control IFR traffic operating below 24,000 feet are provided discrete frequency assignments with normal 100 kc channel protection in the 118.0–127.0 mc band and VHF CAD frequency/communications capability is not provided at these sectors.

Communications with limited equipped aircraft operating at FL 240 and above will be handled by relay through FSS, or as directed by ATC.

EMERGENCY FREQUENCIES—Direct controller-to-pilot communications capability on the emergency frequenices 121.5/243.0 mc is limited to the area (dependent upon the location/altitude of the aircraft) within the vicinity of the ARTC Center since these frequencies are installed to Center use at the local ARTC Center transmitting/receiving site only.

MISC—Communication frequency information for use above FL 240 can also be found on the high-altitude charts.

Pilot to Forecaster Weather Briefing Service available on 122.6 mc.

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Stations providing Airport Advisory Service (AAS) are indicated by the letters AAS following the FSS name. 122.2T is the standard FSS transmitting frequency for this service.

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

•–indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

†–indicates a restricted number, use for aviation weather information only.

%–call FSS for "one call" FSS WBAS briefing service.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name.

FSS's transmit on navigational aid frequencies which are listed first, followed by the identification of the NAVAID.

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 135.9 and emergency 121.5. These frequencies are available at all stations listed, unless annotated by a diamond (◆), identifying those stations where complete standard FSS communications frequencies are not available. This diamond is then supplemented with those standard FSS communications frequencies not available, listed by a cross-out, i.e., ~~135.9~~. Additional frequencies, e.g., 3023.5R, are listed when available. Frequencies transmit and receive unless annotated by the addition of: R – Receive Only, T – Transmit Only, X – On Request.

ARTCC COMMUNICATIONS FREQUENCIES

ALL—Normal communications between ARTCC controllers and pilots of IFR aircraft, **at all altitudes**, will be conducted via direct controller-to-pilot communication channels using the appropriate ARTCC **SECTOR** discrete frequency. Pilots will be advised of the frequency to be used and when a frequency change is required.

VHF—Communications between ARTCC controllers and pilots of aircraft radio equipped aircraft that do not have in-flight tuning capability will be conducted on the ARTCC **AREA** discrete (CAD) frequency, or by relay through the flight service station (FSS). The VHF CAD frequency is normally available to and shared by all non-radar equipped sectors.

The use of radar in air traffic control requires the capability of instantaneous interference free controller-to-pilot communications since radar separation minima may be used; therefore, radar equipped sectors used to control IFR traffic operating below 24,000 feet are provided discrete frequency assignments with normal 100 kc channel protection in the 118.0–127.0 mc band and VHF CAD frequency communications capability is not provided at these sectors.

Communications with limited equipped aircraft operating at FL 240 and above will be handled by relay through FSS, or as directed by ATC.

EMERGENCY FREQUENCIES—Direct controller-to-pilot communications capability on the emergency frequenices 121.5 243.0 mc is limited to the area (dependent upon the location altitude of the aircraft) within the vicinity of the ARTC Center since these frequencies are installed to Center use at the local ARTC Center transmitting/receiving site only.

MISC—Communication frequency information for use above FL 240 can also be found on the high-altitude charts.

Pilot to Forecaster Weather Briefing Service available on 122.6 [illegible]

FSS FREQUENCIES AND TELEPHONE NUMBERS

Service Stations (FSS) provide information on airport con- ...ic aids and other facilities, and process flight plans. ...oviding Airport Advisory Service (AAS) are indicated by ...AAS following the FSS name. 122.2T is the standard FSS ...frequency for this service.

...ion, they provide an aviation weather briefing service. ...weather briefing service is provided on the telephone ...ted. The telephone area code number is shown in paren- ...ion number given is the preferred telephone number to ob- ...weather information. Automatic answering devices are ...used on listed lines to give general local weather infor- ...ng peak workloads. To avoid getting the recorded general ...nouncement, use the selected telephone number listed.

•–Indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

†–Indicates a restricted number, use for aviation weather information only.

%–call FSS for "one call" FSS WBAS briefing service.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name.

FSS's transmit on navigational aid frequencies which are listed first, followed by the identification of the NAVAID.

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 135.9 and emergency 121.5. These frequencies are available at all stations listed, unless annotated by a diamond (◆), identifying those stations where complete standard FSS communications frequencies are not available. This diamond is then supplemented with those standard FSS communications frequencies not available, listed by a cross-out, i.e., ~~135.9~~. Additional frequencies, e.g., 3023.5R, are listed when available. Frequencies transmit and receive unless annotated by the addition of: R – Receive Only, T – Transmit Only, X – On Request.

Pilot to Forecaster Weather Briefing Service available on 122.6 mc.

FSS FREQUENCIES AND TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Stations providing Airport Advisory Service (AAS) are indicated by the letters AAS following the FSS name. 122.2T is the standard FSS transmitting frequency for this service.

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

•–indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

†–indicates a restricted number, use for aviation weather information only.

%–call FSS for "one call" FSS/WBAS briefing service.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name.

FSS's transmit on navigational aid frequencies which are listed first, followed by the identification of the NAVAID.

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 135.9 and emergency 121.5. These frequencies are available at all stations listed, unless annotated by a diamond (◆), identifying those stations where complete standard FSS communications frequencies are not available. This diamond is then supplemented with those standard FSS communications frequencies not available, listed by a cross-out, i.e., ~~135.9~~. Additional frequencies, e.g., 3023.5R, are listed when available. Frequencies transmit and receive unless annotated by the addition of: R – Receive Only, T – Transmit Only, X – On Request.

Pilot to Forecaster Weather Briefing Service available on 122.6 mc

FSS FREQUENCIES AND TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Stations providing Airport Advisory Service (AAS) are indicated by the letters AAS following the FSS name. 122.2T is the standard FSS transmitting frequency for this service.

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

•–indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

†–indicates a restricted number, use for aviation weather information only.

%–call FSS for "one call" FSS WBAS briefing service.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name.

FSS's transmit on navigational aid frequencies which are listed first, followed by the identification of the NAVAID.

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 135.9 and emergency 121.5. These frequencies are available at all stations listed, unless annotated by a diamond (◆), identifying those stations where complete standard FSS communications frequencies are not available. This diamond is then supplemented with those standard FSS communications frequencies not available, listed by a cross-out, i.e., ~~135.9~~. Additional frequencies, e.g., 3023.5R, are listed when available. Frequencies transmit and receive unless annotated by the addition of: R – Receive Only, T – Transmit Only, X – On Request.

Pilot to Forecaster Weather Briefing Service available on 122.6 mc

FSS FREQUENCIES AND TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Stations providing Airport Advisory Service (AAS) are indicated by the letters AAS following the FSS name. 122.2T is the standard FSS transmitting frequency for this service.

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

*-indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

†-indicates a restricted number, use for aviation weather information only.

%-call FSS for "one call" FSS WBAS briefing service.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name.

FSS's transmit on navigational aid frequencies which are listed first, followed by the identification of the NAVAID.

Standard Flight Service Station civil communications frequencies are 126.7 122.2T 122.1R 135.9 and emergency 121.5. These frequencies are available at all stations listed, unless annotated by a diamond (◆), identifying those stations where complete standard FSS communications frequencies are not available. This diamond is then supplemented with those standard FSS communications frequencies not available, listed by a cross-out, i.e., ~~135.9~~. Additional frequencies, e.g., 302.3.5R, are listed when available. Frequencies transmit and receive unless annotated by the addition of R - Receive Only, T - Transmit Only, X - On Request.
